General Description

The HMC699LP5(E) is a frequency synthesizer with a wideband reversible polarity digital PFD and lock detect output. The divider operates from 160 - 7000 MHz with a continuous integer division ratio N = 56 to 519 and non-continuous division ratio N = 16 to 54. The HMC699LP5(E) high frequency operation along with ultra low phase noise floor make possible synthesizers with wide loop bandwidth and low N resulting in fast settling and very low phase noise. When used in conjunction with a differential loop filter, the HMC699LP5(E) can be used to phase lock a VCO to a reference oscillator. For continuous division ratio, the A counter and S counter must satisfy the condition: $A + 1 \geq S$.

Electrical Specifications, $T_A = +25^\circ\text{C}$, $V_{cc} = V_{cc1} = V_{cc2} = V_{cc3} = V_{cc_pd} = 5\text{V}$

HMC699LP5(E) Programming

The decimal value of A counter and S counter can be defined as:

$$A = \text{int} \left(\frac{N}{8} \right) - 1$$

and $S = N - 8(A + 1)$

where $N = 16$ to 519

For a valid division ratio N, the A counter and S counter must satisfy the condition: $A + 1 \geq S$

Therefore, $N = 16$ to 54 will result into non-continuous division ratio

and $N = 56$ to 519 will be continuous division ratio.

Example: Given a reference frequency, $F_{\text{ref}} = 11$ MHz, and VCO output frequency, $F_{\text{vco}} = (198$ to $297)$ MHz, results in $N = 18$ to 27 . The decimal value of A counter and S counter for $N = 18$ will be:

$$A = \text{int} \left(\frac{18}{8} \right) - 1 = 1$$

and $S = 18 - 8(1 + 1) = 2$

Since the calculated value of A and S satisfy the condition of $A + 1 \geq S$, the $N = 18$ is usable division ratio.

The division ratio, $N = 23$, however, will result in $A = 1$ and $S = 7$. Under the condition $A + 1 \geq S$, the division ratio $N = 23$ is not usable.

In this example, the division ratio, $N = 19$ to 23 cannot be programmed and therefore, the frequency range of 209 MHz to 253 MHz cannot be used.
