

MAX14851 Evaluation Kit

Evaluates: MAX14851

General Description

The MAX14851 evaluation kit (EV kit) is a fully assembled and tested circuit board that demonstrates the functionality of the MAX14851 6-channel digital isolator in a 16-pin QSOP package. The EV kit features an on-board isolated power supply and is powered from a single supply.

Features

- Operates from a Single Supply
- 600V_{RMS} Isolation for 60s
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

Quick Start

Required Equipment

- MAX14851 EV kit
- 5V DC power supply
- Signal/function generator
- Oscilloscope

Startup Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Set the power supply to 5V and connect it to the EV kit board between the 5V and GNDA test points (TP1 and TP2, respectively).
- 2) Turn on the power supply.
- 3) Connect a function/signal generator to the INA1 test point (TP3) and set the output to a 1MHz 0 to 5V square wave. Verify that the signal on OUTB1 (TP4) switches as the input signal toggles.

Detailed Description of Hardware

The MAX14851 EV kit is a fully assembled and tested circuit board for evaluating the MAX14851 6-channel digital isolator (U1) in a 16-pin QSOP package.

Powering the MAX13851 EV Kit

The MAX14851 EV kit includes an on-board MAX258 isolated power supply circuit to transfer power from the A-side of the board to the B-side. Connect an external supply to the 5V (TP1) and GNDA (TP2) test points. An on-board MAX258 H-bridge driver circuit (U3) and a MAX8881 LDO (U2) generate an isolated 3.3V supply to power the secondary (B) side of the board.

To bypass the MAX258 circuit and power the board with external supplies, remove the shunts on the J1 and J2 jumpers. Connect a supply between 3V and 5.5V to the 5V test point (TP1), this powers the A-side of the board (VCCA). Connect a supply between 3V and 5.5V to the 3.3V test point (TP24) to power the B-side of the board (VCCB).

Evaluating the MAX14851

The EV kit is powered from a single 5V and is designed to be evaluated alone or dropped into an existing circuit for easy in-system analysis.

All inputs (INA_, INB_) and I/O pins (I/OA_, I/OB_) have an associated test point. Connect a signal generator to the test point for the desired input and monitor the signal on the output of that channel.

Evaluating the MAX14851 in an Isolated RS-485 Configuration

Figure 1 shows a simplified connection diagram for evaluating the MAX14851 in an isolated RS-485 circuit. The high-speed unidirectional channels are used for data channels DI and RO. Bidirectional channels can be used for the enable lines (DE and RE), where lower speed is acceptable.

Figure 1. Simplified Connection Diagram for Evaluating the MAX14851 in an Isolated RS-485 Configuration

Evaluating the MAX14851 in an Isolated RS-232 Configuration

Figure 2 is a simplified connection diagram for evaluating the MAX14851 in an isolated RS-232 configuration.

Evaluating the MAX14851 in an Isolated I²C Configuration

Figure 3 is a simplified connection diagram for evaluating the MAX14851 in an isolated I²C interface. The bidirectional channels with pullups are used to level shift the data and clock signals and transmits them across the isolation barrier.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
