T-1¾ (5 mm) InGaN Blue and Green LEDs

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

Description

This high intensity blue and green LEDs are based on the most efficient and cost effective InGaN material technology.

These LED lamps are untinted and non-diffused T-1¾ packages incorporating second generation optics producing well defined spatial radiation patterns at specific viewing cone angles.

These lamps are made with an advanced optical grade epoxy offering superior high temperature and high moisture resistance performance in outdoor signal and sign application. The epoxy contains uv inhibitor to reduce the effects of long term exposure to direct sunlight.

Features

- Viewing angle: 15°, 23° and 30°
- Well defined spatial radiation pattern
- High luminous output
- Available in Blue and Green
 - Blue 470 nm
 - Green 525 nm
- Superior resistance to moisture
- Standoff and non-standoff Package

Applications

- Traffic signs
- Variable Message Sign
- Commercial outdoor advertising

CAUTION: InGaN devices are Class 1C HBM ESD sensitive per JEDEC Standard. Please observe appropriate precautions during handling and processing. Refer to Application Note AN-1142 for additional details.

Package Dimensions

Drawing A (Non-standoff)

Drawing B (Standoff)

| Part Number | Dimension 'd' |
|-------------|-----------------------------|
| HLMP-Cx1H | $12.39 \pm 0.25 \text{ mm}$ |
| HLMP-Cx2H | $12.35 \pm 0.25 \text{ mm}$ |
| HLMP-Cx3H | $11.93 \pm 0.25 \text{ mm}$ |

Notes:

1. All dimensions in millimeters (inches).
2. Tolerance is ± 0.20 mm unless other specified.
3. Leads are mild steel with tin plating.
4. The epoxy meniscus is 1.5 mm max.

| HLMP-CM3H-Y10DD | Green 525 | 9300 | 21000 | Yes | |

Notes:

1. The luminous intensity is measured on the mechanical axis of the lamp package and it is tested with pulsing condition.
2. The optical axis is closely aligned with the package mechanical axis.
3. Dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the color of the lamp.
4. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is half the on-axis intensity.
5. Tolerance for each bin limit is $\pm 15\%$

Notes:

1. The dominant wavelength is derived from the Chromaticity Diagram and represents the color of the lamp.
2. The radiant intensity, I_e in watts per steradian, maybe found from the equation $I_e = I_v / \eta_V$ where I_v is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/ watt.
3. Indicates product final testing condition, long term reverse bias is not recommended.

Precautions:

Lead Forming:

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering on PC board.
- For better control, it is recommended to use proper tool to precisely form and cut the leads to applicable length rather than doing it manually.
- If manual lead cutting is necessary, cut the leads after the soldering process. The solder connection forms a mechanical ground which prevents mechanical stress due to lead cutting from traveling into LED package. This is highly recommended for hand solder operation, as the excess lead length also acts as small heat sink.

Soldering and Handling:

- Care must be taken during PCB assembly and soldering process to prevent damage to the LED component.
- LED component may be effectively hand soldered to PCB. However, it is only recommended under unavoidable circumstances such as rework. The closest manual soldering distance of the soldering heat source (soldering iron’s tip) to the body is 1.59mm. Soldering the LED using soldering iron tip closer than 1.59mm might damage the LED.
- ESD precaution must be properly applied on the

soldering station and personnel to prevent ESD damage to the LED component that is ESD sensitive. Do refer to Avago application note AN 1142 for details. The soldering iron used should have grounded tip to ensure electrostatic charge is properly grounded.

- Recommended soldering condition:

| | Wave Soldering [1, 2] | Manual Solder Dipping |
|----------------------|------------------------------|------------------------------|
| Pre-heat temperature | 105° C Max. | – |
| Preheat time | 60 sec Max | – |
| Peak temperature | 260° C Max. | 260° C Max. |
| Dwell time | 5 sec Max. | 5 sec Max |

Note:

1. Above conditions refers to measurement with thermocouple mounted at the bottom of PCB.
2. It is recommended to use only bottom preheaters in order to reduce thermal stress experienced by LED.

- Wave soldering parameters must be set and maintained according to the recommended temperature and dwell time. Customer is advised to perform daily check on the soldering profile to ensure that it is always conforming to recommended soldering conditions.

Note:

1. PCB with different size and design (component density) will have different heat mass (heat capacity). This might cause a change in temperature experienced by the board if same wave soldering setting is used. So, it is recommended to re-calibrate the soldering profile again before loading a new type of PCB.

Avago Technologies LED Configuration

- Any alignment fixture that is being applied during wave soldering should be loosely fitted and should not apply weight or force on LED. Non metal material is recommended as it will absorb less heat during wave soldering process.
- At elevated temperature, LED is more susceptible to mechanical stress. Therefore, PCB must allowed to cool down to room temperature prior to handling, which includes removal of alignment fixture or pallet.
- If PCB board contains both through hole (TH) LED and other surface mount components, it is recommended that surface mount components be soldered on the top side of the PCB. If surface mount need to be on the bottom side, these components should be soldered using reflow soldering prior to insertion the TH LED.
- Recommended PC board plated through holes (PTH) size for LED component leads.

| LED component lead size | Diagonal | Plated through hole diameter |
|--|--------------------------|--|
| 0.45 x 0.45 mm (0.018 x 0.018 inch) | 0.636 mm (0.025 inch) | 0.98 to 1.08 mm (0.039 to 0.043 inch) |
| 0.50 x 0.50 mm (0.020 x 0.020 inch) | 0.707 mm (0.028 inch) | 1.05 to 1.15 mm (0.041 to 0.045 inch) |

- Over-sizing the PTH can lead to twisted LED after clinching. On the other hand under sizing the PTH can cause difficulty inserting the TH LED.

Refer to application note AN5334 for more information about soldering and handling of high brightness TH LED lamps.

Example of Wave Soldering Temperature Profile for TH LED

Recommended solder:
 Sn63 (Leaded solder alloy)
 SAC305 (Lead free solder alloy)

Flux: Rosin flux

Solder bath temperature: $255^{\circ}\text{C} \pm 5^{\circ}\text{C}$
 (maximum peak temperature = 260°C)

Dwell time: 3.0 sec - 5.0 sec
 (maximum = 5sec)

Note: Allow for board to be sufficiently cooled to room temperature before exerting mechanical force.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
