GENERAL PRECAUTIONS FOR HANDLING & STORAGE

1. The IS Series devices are electrostatic sensitive. Use care and preventative measures as with any devices that are susceptible to static electricity.
2. Limit operating force to keytop to 100.0N maximum, as excessive pressure may damage the OLED device.
3. Under fixed conditions and over an extended period of time, an afterimage may appear in the viewing area.
4. To avoid damage to the IC, do not touch terminals unless properly insulated from static electricity.
5. The IS series devices are not process sealed. Do not allow devices to become exposed to any liquids. A transparent material may be used as protective cover if devices are in area that may be susceptible to splashing.
6. If the OLED is accidentally broken, avoid contact with the liquid and wash off any liquid spills to the skin or clothing.
7. Clean cap surface with dry cloth. If further cleaning is needed, wipe with dampened cloth using neutral cleanser and dry with clean cloth. Do not use organic solvent.
8. Store in original container, away from static electricity, and away from direct sunlight.
9. Avoid extreme temperatures, high humidity, gaseous substances, and all forms of chemical contamination.
10. Recommended soldering time and temperature limits:
Wave Soldering: Temperature not to exceed 518°F and 11 seconds
When soldering, avoid exposing the OLED to temperatures in excess of 176°F.
11. Proper serial resistors and buffers for signals should be used to prevent noise problems.
12. Do not send any commands other than those on the specification sheet.
