LC01707PLF

CMOS LSI

FM multiple tuner IC

Overview

LC01707PLF is a vehicle-mounted FM multiple tuner IC with FM-FE, IF, IF-Filter, PLL, FM-DEMO and LPF incorporated. An FM multiple tuner can be developed with this one chip. It makes up a small-sized FM multiple tuners which can be mounted on PND.

Functions

- It is the FM tuner IC exclusively for the FM multiple.
- Image reduction complex BPF is incorporated
- Narrow Band IF AGC is incorporated
- DLL detection method is adopted for the FM detection circuit, and it is not necessary to adjust.
- LPF for the carrier removal is incorporated.
- It is a BUS control tuner IC which can be controlled by controlled by I²C BUS.
- LNA is incorporated
- Wide / Narrow Band RF AGC is incorporated
- Image rejection is adopted
- IC requires fewer external components.

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	V _{DD} max		4.3	V
Maximum input voltage	V _{DD} H		4.3	V
Maximum output voltage	V _{DD} L		4.3	V
Power dissipation	Pd max	Ta = 85°C *1	700	mW
Operating ambient	Topr		-40 to 85	°C
Storage temperature	Tstg		-55 to 150	°C
Maximum junction temperature	Tj max		150	°C

*1: Board size: 80mm × 70mm × 1.6mm Glass epoxy double-sided board

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage range	V _{DD}		3.0 to 3.6	V
Recommended supply temperature	V _{DD}		3.3	V

fc = 83MHz, VIN=60dBμVEMF, fm=1kHz, Audio filter: HPF=100Hz, LPF=15kHz

DLL demodulator loop gain setting (09h)=1(01), Mono multi center setting (09h)=7(0111)

*1: Audio filter: HPF=100Hz, LPF=OFF

unit : mm (typ)

The drawing illustrates the mechanical specifications of the VQFN44K(6.0X6.0) package. It includes three views: Top View, Side View, and Bottom View.

- Top View:** Shows a square package with a side length of 6.0. A circular feature is located in the bottom-left corner. The dimension 12 is indicated at the bottom.
- Side View:** Shows the profile of the package with a height of 0.85 MAX and a thickness of 0.0 NOM.
- Bottom View:** Shows the underside of the package with a central square area of 4.0 x 4.0. The package is mounted on a 44-pin carrier. Dimensions include 0.5, 0.16, 0.4, 1, and (1.0).

VQFN44K(6.0X6.0)

Example of applied circuit (constant is tentative)

* Culprits oscillation circuit is used in this IC as a crystal oscillation circuit. Caution is required for layout of the board because oscillation between pin25 and power source and GND line.

* The margin of crystal oscillation changes due to the combination of the IC, a crystal oscillator and a board layout. This independent IC does not quarantine the oscillation operation.

* This IC uses the signal of FM band frequency (VCO divided into 1/4) which leaks into ANT pin. If the VCO leakage affects the performance of the system, make sure to connect an isolator on ANT pin path.

Component	Parameter	Value	Type	Supplier
L1/L2	Local OSC coil	2.7nH	C2012H-2N7D-RD	SAGAMI

Pin Description

Pin No.	Pin name	I/O	Function
1	NAGC	O	Narrow band AGC detection capacitance connecting pin
2	WAGC	O	Wide band AGC detection capacitance connecting pin
3	V _{SS}	P	GND pin for IF
4	NC	-	
5	NC	-	
6	V _{DD}	P	Supply pin for LNA
7	LNA_A	I	LNA +input pin
8	V _{SS}	P	GND pin for LNA
9	LNA_N	I	LNA –input pin
10	NC	-	
11	NC	-	
12	V _{SS}	P	GND pin for 1 st Mixer
13	CP	O	PLL charge pump capacitance connecting pin
14	V _{DD}	P	Supply pin 1 st Mixer
15	V _{DD}	P	Supply pin for local oscillation
16	LO_1	O	Inductor connecting pin for local oscillation
17	V _{SS}	P	GND pin for local oscillation
18	LO_2	O	Inductor connecting pin for local oscillation
19	NC	-	
20	NC	-	
21	NC	-	
22	NC	-	
23	DEVER	I	Device address setting pin
24	V _{SS}	P	GND pin for PLL and logic
25	XTAL	I	Crystal resonator connecting pin (Clock input pin)
26	SD	O	Station detector pin
27	NC	-	
28	NC	-	
29	NC	-	
30	INT	O	Test pin
31	SCL	I	Serial data clock input
32	SDA	I	serial data input-output
33	V _{DD}	P	Supply pin for PLL and logic
34	SMETER	O	S-meter output
35	V _{DD}	P	Supply pin for IF
36	LPFO	O	Demodulation output (after band limitation)
37	DEMOO	O	Demodulation output
38	LPFI	I	Demodulation signal input pin
39	DEMOC	O	Capacitance connecting pin for demodulation detection
40	NC	-	
41	NC	-	
42	NC	-	
43	NC	-	
44	GND	P	GND pin

Pin Function

Pin No.	Pin name	Function	Equivalent circuit
1	NAGC	Narrow band AGC detection capacitor connection pin.	
2	WAGC	Wide band AGC detection capacitor connection pin.	
3	VSS	GND pin for IF.	
4	NC	No connection.	
5	NC	No connection.	
6	VDD	Supply pin for LNA.	
7	LNA_P	Pin 7 is + input pin for LNA.	
8	VSS	Pin 8 is GND pin for LNA.	
9	LNA_N	Pin 9 is - input pin for LNA.	
10	NC	No connection.	
11	NC	No connection.	
12	VSS	GND pin 1st mixer for the 1 st mixer.	
13	CP	PLL charge pump capacitor connection pin.	
14	VDD	Supply pin for the 1 st mixer.	
15	VDD	Supply pin for local oscillator.

Pin No.	Pin name	Function	Equivalent circuit
31	SCL	Serial data clock input.	
32	SDA	Serial data input/ output.	
33	VDD	PLL_logic supply voltage pin.	
34	SMETER	S-meter output.	
35	VDD	IF supply voltage pin	
36	LPFO	Demodulator output (After band limit).	
37	DEMOO	Demodulator output.	
38	LPFI	Demodulator signal input pin.	

Continued on next page.

Continued from preceding page.

Pin No.	Pin name	Function	Equivalent circuit
39	DEMO	Capacitor connection pin for demodulator detection.	
40	NC	No connection.	
41	NC	No connection.	
42	NC	No connection.	
43	NC	No connection.	
44	GND	GND pin.	

Communication specification

Communication specifications are indicated as below:

Serial Interface (I²C-bus);

Sending and receiving data through I²C-bus that consists of two bus lines of a serial data line (SDA) and a serial clock line (SCL). This bus enables 8-bit bi-directional serial data to transmit at the maximum speed of 400kbits (fast mode). This is not compatible with Hs mode.

Terms used in I²C

The following terms are used in I²C

Terms	Description
Transmitter	Device to send data to the bus
Receiver	Device to receive from the bus
Master	Device to start data transmission, generate signal, and terminate data transmission
Slave	Device of which address is designated master

[Start] and [Stop] conditions

[Start] condition is required at the start of data communication and [Stop] condition at the end of data communication. The condition in which the SDA line changes from [H] to [L] with SCL at [H] is called the [Start] condition. The condition in which the SDA line changes from [L] to [H] with SCL at [H] is called the [Stop] condition.

Data transmission

The length of each byte which is output to SDA line is always 8 bits. An acknowledge bit is needed after each byte.

Data is transmitted sequentially from the most significant bit (MSB).

During the data transfer, the slave address is transmitted after the [Start] condition (S).

Data transfer is always ended by the [Stop] condition (P) generated by the master.

Acknowledge (Receive acknowledge)

When the master generates the acknowledge clock pulse, the transmitter opens the SDA line. (SDA line enters the [H] state.) When the acknowledge clock pulse is in the [H] state, the receiver sets the SDA line to [L] each time it receives one byte (eight bits) data. When the master works as a receiver, the master informs the slave of the end of data by omitting acknowledge at the end of data sent from the slave.

Software reset

If the communication is interrupted (microcomputer reset, etc.), it is possible to communicate normally by entering the below signals and resetting the CPU in software.

*These signal timings restore the communication after its interruption. The register setting is never reset.

*Software reset command is incompatible with I²C-bus format.

LC01707PLF

Electrical specification and timing for I/O stages

Bus line characteristics

Characteristic	Symbol	FAST-MODE		unit	Example at SCL = 100kHz
		min	max		
SCL clock frequency	fSCL		400	kHz	100
Fall time of SDA and SCL	t1	20+0.1Cb	300	ns	
Rise time of SDA and SCL	t2	20+0.1Cb	300	ns	
SCL "H" time	t3	0.6		μs	3
SCL "L" time	t4	1.3		μs	7
[Start] condition holding time	t5	0.6		μs	10
Data holding time for I ² C bus device	t6	0.3		μs	
Data setup time	t7	0.1		μs	3
[Stop] condition setup time	t8	0.6		μs	10
Bus free time between [Stop] and [Start]	t9	1.3		μs	20
[Start] condition setup time	t10	0.6		μs	
Bus line capacitive load	Cb		400	pF	

Serial interface voltage level

V_{DD}: Communication bus voltage

Characteristic	min	max	unit
High level input voltage	0.7V _{DD}	V _{DD}	V
Low level input voltage	0.0	0.3V _{DD}	V
High level output voltage (open drain)	V _{DD} *2		V
Low level output voltage (open drain)	0.0	0.2V _{DD}	V

*2: Output impedance of open drain becomes high at the high level output voltage.

Output voltage equals to V_{DD} (voltage =V_{DD}) since drain is pulled up to V_{DD}.

Definition of each bit

1) Slave address

The slave address consists of seven-bit fixed address "1110000" or "1110001", which is unique to a chip, and the eighth-bit data direction bit(R/W). Sending (writing) is processed when the data direction bit is "0", and receiving (reading) is processed when it is "1". The fixed address is set to "1110001" at DEVAR=1 and it is set to "1110000" at DEVAR=0.

R/W	BIT
READ	1
WRITE	0

2) Register address

Since the total number of internal register is 34, 2-bit data set on the MSB side becomes invalid. 64 addresses are accepted 6 bits are used, but only 34 registers are used.

3) Register data

Each register data consists of eight bits.

Command Format

1) Individual registers data writing

2) Individual registers data reading

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
