

# MAX6072

# High-Precision, Dual-Output Series Voltage Reference

## General Description

The MAX6072 is a dual-output precision series voltage reference. The product features two outputs,  $+V_{REF}$  and  $+V_{REF}/2$ . The device exhibits a very low  $1/f$  noise of 2ppm (peak-to-peak). Each output can source and sink 10mA and has an independent sense line. This product has a temperature drift of 6ppm/ $^{\circ}$ C (max) over the ambient temperature range of  $-40^{\circ}$ C to  $+125^{\circ}$ C and an initial accuracy of 0.04%. Three pairs of output voltages are available: 5V/2.5V, 4.096V/2.048V, and 2.5V/1.25V. The product operates with an input voltage range of 2.8V to 5.5V and has sufficient headroom for the highest voltage. It consumes a mere 150 $\mu$ A (typ) of quiescent supply current per reference. The dual voltage outputs make this device ideal for precision ADC applications where the input signal needs to be referred to  $V_{REF}/2$ .

The MAX6072 is available in a 10-pin  $\mu$ MAX<sup>®</sup> package and is specified for operation over the extended  $-40^{\circ}$ C to  $+125^{\circ}$ C industrial temperature range.

## Applications

- ADC/DAC References and Common-Mode Set-Point
- Test and Measurement/ATE
- High-Accuracy Industrial and Process Control
- Portable Medical

## Benefits and Features

- Low Temperature Coefficient Ensures Stable System Over Wide Temperature Ranges
  - A-grade: 6ppm/ $^{\circ}$ C (max)
  - B-grade: 8ppm/ $^{\circ}$ C (max)
- Excellent Long-Term Drift Ensures Accurate Signal Chain Readings Over Time
  - 15ppm Drift Over 1,000 Hours
- Dual References ( $V_{REF}$  and  $V_{REF}/2$ ) Provide ADC/DAC Reference and Common-Mode Reference
  - MAX6072\_\_50:  $V_{REF} = 5V$ ,  $V_{REF}/2 = 2.5V$
  - MAX6072\_\_41:  $V_{REF} = 4.096V$ ,  $V_{REF}/2 = 2.048V$
  - MAX6072\_\_25:  $V_{REF} = 2.5V$ ,  $V_{REF}/2 = 1.25V$
- Low Thermal Hysteresis Ensures Consistent Results Through Temperature Cycles
  - 85ppm
  - 2.5ppm Thermal Hysteresis Tracking
- Separate Enable-Control for Each Output Allows Independent Control
- Low Power for Battery-/Loop-Powered Sensors: 150 $\mu$ A/Reference

*Typical Operating Circuit and Ordering Information appears at end of data sheet.*

**Absolute Maximum Ratings**

IN1, IN2 to GND .....	-0.3V to +6V	Operating Temperature Range .....	-40°C to +125°C
OUT1F to GND .....	-0.3V to the lower of (V <sub>IN1</sub> + 0.3V), +6V	Storage Temperature .....	-65°C to +150°C
OUT2F to GND .....	-0.3V to the lower of (V <sub>IN2</sub> + 0.3V), +6V	Junction Temperature .....	+150°C
OUT1S, OUT2S to GND .....	-0.3V to +6V	Lead Temperature (soldering, 10s) .....	+300°C
EN1, EN2 to GND .....	-0.3V to +6V	Soldering Temperature .....	+260°C
Continuous Power Dissipation (T <sub>A</sub> = +70°C)			
μMAX (derate 5.6mW/°C above +70°C) .....	444mW		

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Package Thermal Characteristics (Note 1)**

μMAX			
Junction-to-Ambient Thermal Resistance (θ <sub>JA</sub> ) .....	180°C/W	Junction-to-Case Thermal Resistance (θ <sub>JC</sub> ) .....	42°C/W

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

- Note 2:** All devices are 100% production tested at T<sub>A</sub> = +25°C. Specifications over the entire operating temperature range are guaranteed by design and characterization. Typical specifications are at T<sub>A</sub> = +25°C.
- Note 3:** Temperature coefficient is calculated using the “box method” which measures temperature drift as the maximum voltage variation over a specified temperature range. The unit of measurement is ppm/°C.  
Temperature coefficient matching (ΔTC) is calculated using the “box method” which measures temperature drift as the maximum variation of the difference between the normalized output voltages, V<sub>OUT2\_NORM</sub> and V<sub>OUT1\_NORM</sub> (over a specified temperature range). The unit of measurement is ppm/°C, V<sub>OUT\_NORM</sub> = [(V<sub>OUT</sub>(T) - V<sub>OUT</sub>(25°C))/V<sub>OUT</sub>(25°C)]
- Note 4:** Dropout voltage is defined as the minimum differential voltage (V<sub>IN</sub> - V<sub>OUT</sub>) at which V<sub>OUT</sub> decreases by 0.2% from its original value at V<sub>IN</sub> = 5.0V.
- Note 5:** Thermal hysteresis is defined as the change in +25°C output voltage before and after cycling the device from T<sub>MAX</sub> to T<sub>MIN</sub>. Thermal hysteresis matching is defined as the difference of the thermal hysteresis for each output (OUT1 and OUT2): ΔTH = TH<sub>OUT2</sub> - TH<sub>OUT1</sub>
- Note 6:** Dropout voltage is defined as the minimum differential voltage (V<sub>IN</sub> - V<sub>OUT</sub>) at which V<sub>OUT</sub> decreases by 0.2% from its original value at V<sub>IN</sub> = 5.5V.

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	OUT1F	$V_{REF}$ Reference 1 ( $V_{OUT1F}$ ) Force Output. Short OUT1F to OUT1S as close as possible to the load. Bypass with a capacitor (0.1 $\mu$ F to 10 $\mu$ F) to GND.
2	OUT1S	$V_{REF}$ Voltage Reference 1 ( $V_{OUT1S}$ ) Sense
3, 8	GND	Ground. Both the pins 3 and 8 must be externally connected to a solid ground plane.
4	EN2	Voltage Reference 2 Enable Input. Drive high to enable $V_{REF2}$ . Drive low to disable $V_{REF2}$ .
5	IN2	Voltage Reference 2 Supply Input
6	OUT2F	$V_{REF}/2$ Voltage Reference 2 ( $V_{OUT2F}$ ) Force Output. Short OUT2F to OUT2S as close as possible to the load. Bypass with a capacitor (0.1 $\mu$ F to 10 $\mu$ F) to GND.
7	OUT2S	$V_{REF}/2$ Voltage Reference 2 ( $V_{OUT2S}$ ) Sense
9	EN1	Voltage Reference 1 Enable Input. Drive high to enable $V_{REF1}$ . Drive low to disable $V_{REF1}$ .
10	IN1	Voltage Reference 1 Supply Input

Functional Diagram

Detailed Description

Output Force and Sense

The MAX6072 provides independent Kelvin connections for the power-circuit output (OUTF) supplying current to the load and the circuit input regulating the voltage applied to that load (OUTS). This configuration allows for the cancellation of the voltage drop on the lines connecting the MAX6072 and the load. When using the Kelvin connection made possible by the independent current and voltage connections, connect OUTF to the load and connect OUTS to OUTF at the point where the voltage accuracy is most needed (see [Figure 1](#)).

Output Bypassing

The MAX6072 requires an output capacitor between 0.1µF and 10µF. Place the output capacitor as close to OUT\_F as possible. For applications driving switching capacitive loads or rapidly changing load currents, use a 10µF capacitor in parallel with a 0.1µF capacitor. Larger capacitor values reduce transients on the reference output.

Supply Voltage

Each of the MAX6072 references offers individual supply voltage inputs (IN1 and IN2). IN1 supplies the power to VREF1 and IN2 for VREF2. Each of the two references can be powered up separately or from the same supply voltage by shorting IN1 and IN2 together.

Figure 1. Reference Output Kelvin Connection

**Thermal Hysteresis**

Thermal hysteresis is the change of output voltage at  $T_A = +25^\circ\text{C}$  before and after the device is cycled over its entire operating temperature range. The typical thermal hysteresis value is 85ppm.

**Turn-On Time**

The device typically turns on and settles to within 0.01% of their final value in 25 $\mu\text{s}$  to 40 $\mu\text{s}$ . The turn-on time can increase up to 4ms with the device operating at the minimum dropout voltage and the maximum load.

**Applications Information**

**Accurate Reference by Using the Other Reference Output as the Supply Input**

In certain applications where only a single reference is required, the dual reference can be used as a single reference output when one of its references ( $V_{OUT1F}$  where  $V_{OUT1F} > V_{OUT2F}$ ) is used as the supply input for the second internal reference of the part (see Figure 2). By doing so, the output reference accuracy is improved as the PSRR performance improves. Since both the refer-

ences are present in the same package, they exhibit the same thermal trend in variation.

**Dual Referencing Fully Differential Amplifier and ADC**

Applications employing a fully differential amplifier and ADC in a signal chain typically require maintaining the input(s) at half the  $V_{REF}$  (V) for the common-mode voltage being applied to the ADC. For this purpose, either a second reference with the value  $V_{REF\_DIFF\_AMP} = V_{REF}/2$ , or an op amp is often used as output common-mode biasing. The MAX6072A/B series is used with ease in these situations, where  $V_{REF\_DIFF\_AMP}$  can be referenced from the  $V_{REF2}$  available from the part. This way, both the  $V_{REF}$  and  $V_{REF}/2$  to the ADC and the differential amplifier are provided by the same part providing improved accuracy and lesser board space. See [Figure 3](#).

The [Typical Operating Circuit](#) shows MAX6072A\_41 used in a signal chain, performing single-ended to differential conversion.

Typical Operating Circuit

### Ordering Information

PART	PIN-PACKAGE	V <sub>REF1</sub> /V <sub>REF2</sub>
<b>MAX6072AAUB25+</b>	10 $\mu$ MAX	2.500V/1.250V
MAX6072AAUB41+	10 $\mu$ MAX	4.096V/2.048V
MAX6072AAUB50+	10 $\mu$ MAX	5.000V/2.500V
<b>MAX6072BAUB25+</b>	10 $\mu$ MAX	2.500V/1.250V
MAX6072BAUB41+	10 $\mu$ MAX	4.096V/2.048V
MAX6072BAUB50+	10 $\mu$ MAX	5.000V/2.500V

**Note:** All devices are specified over the  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  operating temperature range.

+Denotes a lead(Pb)-free/RoHS-compliant package.

### Chip Information

PROCESS: BiCMOS

### Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	OUTLINE NO.	LAND PATTERN NO.
10 $\mu$ MAX	U10M+5	<a href="#">21-0061</a>	<a href="#">90-0330</a>

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
