ASM809, ASM810

3 Pin Microcontroller Power Supply Supervisor

General Description

The ASM809/ASM810 are cost effective 3.0V, 3.3V and 5.0V power supply supervisor circuits optimized for low-power microprocessor (µP), microcontroller (µC) and digital systems. They provide a reset output during power-up, power-down and brown-out conditions. They provide excellent reliability by eliminating external components and adjustments. The ASM809/810 are improved drop-in replacements for the Maxim MAX809/810 and feature 60% lower supply current.

A reset signal is issued if the power supply voltage drops below a preset reset threshold and is asserted for at least 140ms after the supply has risen above the reset threshold. The ASM809 has an active-low $\overline{\text{RESET}}$ output that is guaranteed to be in the correct logic state for V_{CC} down to 1.1V. The ASM810 has an active-high RESET output. The reset comparator is designed to ignore fast transients on V_{CC}.

Low supply current makes the ASM809/ASM810 ideal for use in portable and battery operated equipment. The ASM809/ASM810 are available in a compact, industry standard 3-pin SOT23 package.

Six voltage thresholds are available to support 3V to 5V systems:

RESET THRESHOLD	
Suffix	**Voltage**
L	4.63
M	4.38
J	4.00
T	3.08
S	2.93
R	2.63

Features:

- Monitor 5V, 3.3V and 3V supplies
- 140ms min. reset pulse width
- Active-low reset valid with 1.1V supply (ASM809)
- Small 3-pin SOT-23 package
- No external components
- Specified over full temperature range - -40°C to 105°C

Applications

- Embedded controllers
- Portable/Battery operated systems
- Intelligent instruments
- Wireless communication systems
- PDAs and handheld equipment
- Computers

Pin Description

Pin #		Pin Name	Function
ASM809	ASM810		
1	-	GND	Ground.
2	-	$\overline{RESET}$	$\overline{RESET}$ is asserted LOW if V_{CC} falls below V_{TH} and remains LOW for T_{RST} after V_{CC} exceeds the threshold.
-	2	RESET	RESET is asserted HIGH if V_{CC} falls below V_{TH} and remains HIGH for T_{RST} after V_{CC} exceeds the threshold.
3	-	V_{CC}	Power supply input voltage (3.0V, 3.3V, 5.0V).

Detailed Description

A proper reset input enables a microprocessor / microcontroller to start in a known state. ASM809/810 assert reset to prevent code execution errors during power-up, power-down and brown-out conditions.

Reset Timing

The reset signal is asserted- LOW for the ASM809 and HIGH for the ASM810- when the V_{CC} supply voltage falls below the threshold trip voltage and remains asserted for 140ms minimum after the V_{CC} has risen above the threshold.

Application Information

Negative V_{CC} Transients

The ASM809/810 protect µPs from brownouts and low V_{CC}. Short duration transients of 100mV amplitude and 20µs or less duration typically do not cause a false RESET.

Valid Reset with V_{CC} under 1.1V

When V_{CC} is under 1.1V, to ensure logic inputs connected to the ASM809 $\overline{\text{RESET}}$ pin are in a known state, a 100kΩ pull-down resistor is needed at $\overline{\text{RESET}}$. The value of the resistor is not critical. A 100kΩ pull-up resistor to V_{CC} at RESET is needed with the ASM810.

Bidirectional Reset Pin Interfacing

The ASM809/810 can interface with µP / µC bi-directional reset pins by connecting a 4.7kΩ resistor in series with the ASM809/810 reset output and the µP/µC bi-directional reset pin.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
