

FEATURES

- Patents protected
- No opto feedback
- Optimised bipolar output voltages for IGBT/ SiC & MOSFET gate drives
- Configurable dual outputs for all gate drive applications:
+15V/-5V, +15V/-10V & +20V/-5V outputs
- UL60950 Reinforced isolation to 690Vrms recognised
- IEC61800-5-1 recognition pending
- Characterised dv/dt immunity 80kV/μs at 1.6kV
- Characterised partial discharge performance
- 14mm Creepage and clearance
- Ultra low coupling capacitance 13pF
- DC link voltage 3kVDC
- 5V, 12V & 24V input voltages
- 105°C operating temperature

PRODUCT OVERVIEW

With 14mm creepage and clearance distances and reinforced insulation rating of 690VAC, the MGJ6-14mm is ideally suited for use in higher efficiency 690VAC industrial electrical distribution systems. Offering configurable dual output voltages of +15V/-10V, +20V/-5V and +15V/-5V, the MGJ6-14mm series of DC-DC converters is ideal for powering 'high side' and 'low side' gate drive circuits for IGBTs, Silicon and Silicon Carbide MOSFETs in bridge circuits. A choice of asymmetric output voltages allows optimum drive levels for best system efficiency and EMI. The MGJ6-14mm series is characterised for high isolation and dv/dt requirements commonly seen in bridge circuits used in motor drives and inverters.

SELECTION GUIDE

| Storage | | -55 | | 125 | |
| Product temperature rise above ambient | 100% Load, Nom V_{IN} , Still Air | | 20 | | |

ABSOLUTE MAXIMUM RATINGS

| | |
|--|------------|
| Short-circuit protection | Continuous |
| Input voltage, MGJ6-14mm 5V input types | 12V |
| Input voltage, MGJ6-14mm 12V input types | 20V |
| Input voltage, MGJ6-14mm 24V input types | 40V |

TECHNICAL NOTES

ISOLATION VOLTAGE

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions MGJ6-14mm series of DC-DC converters are all 100% production tested at 10.2kVDC for 1 second and have been qualification tested at 10.2kVDC for 1 minute.

The MGJ6-14mm series is recognised by Underwriters Laboratory, please see safety approval section for more information. When the insulation in the MGJ6-14mm series is not used as a safety barrier, i.e. provides functional isolation only, continuous or switched voltages across the barrier up to 3kV are sustainable. This is established by measuring the partial discharge inception voltage in accordance with IEC 60270. Please contact Murata for further information.

REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

SAFETY APPROVAL

IEC61800-5-1

The MGJ6-14mm series is pending recognition IEC61800-5-1 based upon a working voltage of 690 Vrms max., between Primary and Secondary.

UL60950

The MGJ6-14mm series is recognised by Underwriters Laboratory (UL) to UL60950 for reinforced insulation to a working voltage of 690Vrms with a maximum measured product operating temperature of 130°C.

File number E151252 applies.
Creepage and clearance 14mm.
Working altitude OVC II 5000m

FUSING

The MGJ6-14mm series of converters are not internally fused so to meet the requirements of UL an anti-surge input line fuse should always be used with ratings as defined below.

Input Voltage, 5V 4A
Input Voltage, 12V 2A
Input Voltage, 24V 1A

All fuses should be UL recognised, 125V rated.

RoHS COMPLIANCE, MSL AND PSL INFORMATION

This series is compatible with RoHS soldering systems with a peak reflow solder temperature of 245°C and Time Above Liquidus for 90 seconds, as per J-STD-020D.1. The pin termination finish on this product series is Gold with Nickel Pre-plate. The series is backward compatible with Sn/Pb soldering systems. The series has a Moisture Sensitivity Level (MSL) 2. Samples of the product series were tested in accordance with the conditioning described for MSL level 2 in IES/J-STD-020D.1. The product series passed electrical tests, co-planarity and visual inspection criteria.

PART NUMBER STRUCTURE

CHARACTERISATION TEST METHODS

Ripple & Noise Characterisation Method

Ripple and noise measurements are performed with the following test configuration.

| | |
|-------|--|
| C1 | 1µF X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC-DC converter |
| C2 | 10µF tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC-DC converter with an ESR of less than 100mΩ at 100 kHz |
| C3 | 100nF multilayer ceramic capacitor, general purpose |
| R1 | 450Ω resistor, carbon film, ±1% tolerance |
| R2 | 50Ω BNC termination |
| T1 | 3T of the coax cable through a ferrite toroid |
| RLOAD | Resistive load to the maximum power rating of the DC-DC converter. Connections should be made via twisted wires |

Measured values are multiplied by 10 to obtain the specified values.

Differential Mode Noise Test Schematic

APPLICATION NOTES

Disable/Frequency synchronisation

Please refer to application notes for further information.

| | | Min | Typ | Max | Units |
|---------------------------|-------------------|------|-----|-----|-------|
| Disable/Sync ¹ | Pull Down Current | | 0.5 | | mA |
| | Input High | 2 | | 60 | V |
| | Input Low | -0.6 | | 0.8 | V |
| Synchronisation | Frequency Range | 90 | 100 | 110 | kHz |
| | Duty Cycle | 25 | | 75 | % |

The $\overline{\text{Dis}}/\text{Sync}$ pin has three modes:

1. When a DC logic low voltage is applied to this pin the MGJ6-14mm is disabled and enters a low quiescent current sleep mode.
2. When this pin is left floating or a DC logic high (CMOS/TTL compatible) voltage is applied the MGJ6-14mm is enabled and operates at the programmed frequency of 100kHz.
3. When a square wave of between 90kHz and 110kHz is applied to this pin, the switcher operates at the same frequency as the square wave. The falling edge of the square wave corresponds to the start of the switching cycle. If the signal is slower than 25Hz, it will be interpreted as enabling and disabling the part. If the MGJ6-14mm is disabled, it must be disabled for 7 clock cycles before being re-enabled.

Note: The $\overline{\text{Dis}}/\text{Sync}$ pin is a high impedance TTL input and can be triggered by noise from external circuits if not treated carefully.

Please refer to "LAYOUT CONSIDERATIONS" and "SYNCHRONISATION CIRCUIT" for further details.

[Click here for general guidance for gate drive applications.](#)

LAYOUT CONSIDERATIONS

Unlike standard isolated DC-DC products the MGJ6-14mm series has been designed specifically for high side gate drive applications where the outputs are being driven to a high voltage at a very high dV/dT. This is possible due to minimum transformer coupling capacitance and considered circuit design regarding common mode transient immunity. It is important that these few simple pcb layout guidelines are implemented so as not to compromise the performance of the DC-DC and that of the overall system.

1. The keep clear area shown must not have any copper traces even on internal layers. This is not only to avoid compromising the creepage and clearance distance but also to minimise capacitive coupling between the noisy output circuits and input control circuits. In general it is good practice to maintain the same band of clearance area running directly through both the DC-DC and the gate drive isolators as shown so that input and output are kept separate and do not overlap or mesh together at any point.
2. A top layer ground plane copper area connected to $-V_{in}$ can be used to create an effective screen to the underside of the MGJ6-14mm series and can also be used as a guard ring for the gate drive isolator inputs. If the $\overline{\text{Dis}}/\text{Sync}$ pin is being used then it is imperative that it follows a route covered by this screen to avoid differential pick up. It should also be kept as short as possible.

Please refer to "PACKAGE SPECIFICATIONS" for recommended layout.

SYNCHRONISATION CIRCUIT

1. A suggested synchronisation circuit is shown. C1 and C2 are 100nF capacitors. D1 and D2 are schottky diodes. The capacitive coupling and close connected diode ensures that a transition from high to low is seen at the input pin even in a noisy environment or when there is a slight ground shift between devices.
2. If the $\overline{\text{Dis}}/\text{Sync}$ pin is not used for synchronisation, then a 22nF capacitor can be added between the $\overline{\text{Dis}}/\text{Sync}$ pin and $-V_{in}$ pin to improve noise immunity. If the functionality of $\overline{\text{Dis}}/\text{Sync}$ is not required, the $\overline{\text{Dis}}/\text{Sync}$ pin can be connected directly to the $+V_{in}$ pin to improve noise immunity.
3. One very effective method to reduce common mode transient interference is to add a common mode filter to the DC input. It may only be necessary to add one before splitting the supply to each DC-DC.

APPLICATION NOTES (Continued)

Start-up times

Typical start up times for this series, with no additional output capacitance are:

Output capacitance must not exceed:

| Part No. | Start-up times |
|----------------|----------------|
| | ms |
| MGJ6D051510WMC | 15 |
| MGJ6D121510WMC | 15 |
| MGJ6D241510WMC | 15 |

| Output Voltage | Maximum output capacitance |
|----------------|----------------------------|
| V | µF |
| -5 | 470 |
| -10 | 220 |
| 15 | 220 |
| 20 | 150 |

Output configurations for power switches

| Terminal | IGBT | SIC | MOSFET |
|----------------------------------|---------------|---------------|---------------|
| (P5) 15V Output | +15V 0.24A | +20V 0.24A | +15V 0.3A |
| (P4) 15V Return 5VA Output | 0V | No connection | 0V |
| (P3) 5VA Return 5VB Output | No connection | 0V | -5V 0.3A |
| (P2) 5VB Return | -10V 0.24A | -5V 0.24A | No connection |

TEMPERATURE DERATING

Derating curves are based on IPC-9592. With no derating some components may be operating at the manufacturers maximum temperature ratings.

EMC FILTERING AND SPECTRA

FILTERING

The following filter circuit and filter table shows the input filters typically required to meet conducted emissions limits for EN 55022 curve B using Quasi-Peak (pink line) and average (green line) detectors according to CISPR 22. The following plots show measurements of the positive (L1) and negative (L2) inputs for both Quasi-peak limit B adherence and Average limit B adherence. If a high dv/dt above 80kV/us is expected from output to input it is advised that a common mode filter is used on the input without Y capacitors. This will reduce the common mode current and reduce interference with primary side circuits.

C1, C2 & C3 Polyester or ceramic capacitor

C4 Electrolytic capacitor (note R1 could be omitted if C4 has ESR \geq R1)

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
