

GENERAL DESCRIPTION

The XRP2525 and XRP2526 devices are respectively single and dual channel integrated high-side power distribution switches with independent enables and fault flags. A wide 1.8V to 5.5V input voltage range allows for operations from industry standard 1.8V, 3.3V and 5V power rails.

Optimized for USB V_{BUS} power distribution, the XRP2525 and XRP2526 are compliant with the latest USB 3.0 specification and can be used in any self or bus powered USB applications. The power-switch rise and fall times are controlled to minimize current surges during turn on/off.

The XRP2525 and XRP2526 are pin and function compatible to respectively Exar's SP2525A and SP2526A.

Built-in over current, under voltage lockout (UVLO), reverse current and over temperature protections insure safe operations under abnormal operating conditions.

XRP2525 and XRP2526 are offered in a RoHS compliant "green"/halogen free 8-pin NSOIC package.

APPLICATIONS

- Self Powered USB 2.0 and 3.0 Hubs
- USB Compliant V_{BUS} Power Distribution
- Audio-Video Equipments
- Generic Power Switching

FEATURES

- **Single/Dual Channel Current Switch**
 - 900mA per channel capable
 - 1.15A Over-current Limit
 - 1.8V to 5.5V Input Voltage Range
- **USB 2.0/3.0 Compliant**
- **Active High or Low Individual Enable**
- **Individual Channel Fault Flag Indicator**
- **Under voltage Lockout, Reverse Current and Thermal Shutdown Protection**
- **RoHS Compliant, Green/Halogen Free 8-Pin NSOIC Package**

TYPICAL APPLICATION DIAGRAM

Fig. 1: XRP2526 Application Diagram

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

- V_{IN}..... -0.3V to 7.0V
- V_{EN}, V_{FLG} 7.0V
- Storage Temperature..... -65°C to 150°C
- Power Dissipation Internally Limited
- Lead Temperature (Soldering, 10 sec) 300°C
- ESD Rating (HBM - Human Body Model) 2kV
- ESD Rating (MM - Machine Model)200V

OPERATING RATINGS

- Input Voltage Range V_{IN}..... 1.75V to 5.5V
- Junction Temperature Range-40°C to 125°C
- Thermal Resistance θ_{JA} 128.4°C/W

ELECTRICAL SPECIFICATIONS

Specifications are for an Operating Junction Temperature of T_J = 25°C only; limits applying over the full Operating Junction Temperature range are denoted by a “•”. Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at T_J = 25°C, and are provided for reference purposes only. Unless otherwise indicated, 1.8V to 5.5V, C_{IN} = 47µF//1µF, C_{OUT} = 10µF, T_J = -40°C to 125°C.

| Parameter | Min. | Typ. | Max. | Units | Conditions |
|------------------------------------------------|------|-----------------------|------|-------|------------------------------------------------------------------------------------------------------|
| Input Supply Voltage | 1.8 | | 5.5 | V | • |
| Input Quiescent Current | | 80 | 150 | µA | • XRP2526 (Both Channels enabled) V _{IN} =5V, I _{OUT1} = I _{OUT2} =0mA |
| Input Quiescent Current | | 52 | 100 | µA | • XRP2525 & XRP2526 (1 Channel enabled) V _{IN} =5V, I _{OUT1} =0mA |
| Input Shutdown Current | | | 3 | µA | • V _{IN} =5V, Channel(s) disabled |
| Maximum Output Current per channel | 900 | | | mA | • XRP2525 and XRP2526 |
| Output Leakage Current | | | 10 | µA | V _{IN} =5V, V _{OUT} =0V, Each channel, Switch off |
| Reverse Leakage Current | | | 10 | µA | V _{IN} =0V, V _{OUT} =5V, Each channel, Switch off |
| Output MOSFET Resistance | | 80 | 140 | mΩ | • I _{OUT} =0.3A, Each channel |
| Output turn-on delay | | 1000 | | µs | V _{IN} =5V, R _L =10Ω, C _{OUT} =1µF, each output |
| Output turn-on rise time | | 2000 | 4000 | µs | V _{IN} =5V, R _L =10Ω, C _{OUT} =1µF, each output |
| Output turn-off delay | | 10 | 20 | µs | V _{IN} =5V, R _L =10Ω, C _{OUT} =1µF, each output |
| Output turn-off fall time | | 22 | 50 | µs | V _{IN} =5V, R _L =10Ω, C _{OUT} =1µF, each output |
| Current limit threshold | 0.90 | 1.15 | 1.40 | A | • V _{IN} - V _{OUT} =0.3V, Internally set |
| Short Circuit Current Limit | | 0.66xI _{LIM} | | A | V _{OUT} =0V |
| Output Voltage Short Circuit Detect Threshold | | 925 | | mV | Operates in short circuit current limit mode when output voltage is below threshold. |
| Safe Operating Area (SOA) Current Limit | | 3 | | A | |
| Over temperature shutdown threshold | | 135 | | °C | Temperature rising |
| Over temperature shutdown threshold hysteresis | | 10 | | °C | Temperature decreasing |
| Under-voltage lockout threshold | 1.55 | 1.68 | 1.75 | V | V _{IN} rising or falling |
| Under-voltage lockout hysteresis | | 50 | | mV | |
| FLG output logic low voltage | | 100 | 250 | mV | I _{FLG} =10mA, V _{IN} =5.5V |
| FLG output high leakage | | | 1 | µA | |
| FLG blanking time | | 10 | | ms | |
| EN input logic high voltage | 1.5 | | | V | • |
| EN input logic low voltage | | | 0.5 | V | • |
| EN input leakage current | -1 | 0 | 1 | µA | V _{EN} =0V or V _{EN} =5.5V |

PIN DESCRIPTION – XRP2525

| Name | Pin Number | Description |
|------|------------|-----------------------------------------------------------------------------------------------------------------|
| EN | 1 | Channel Enable Input Active High for XRP2525-1 and Active Low for XRP2525-2 |
| FLG | 2 | Error Flag Signal Active low open drain output. Active on over-current, over-temperature or UVLO conditions. |
| GND | 3 | Ground Signal |
| NC | 4,5,6 | No Connect |
| IN | 7 | Voltage Input Pin |
| OUT | 8 | Voltage Output Pin |

PIN DESCRIPTION – XRP2526

| Name | Pin Number | Description |
|------------------|------------|-----------------------------------------------------------------------------------------------------------------|
| EN _x | 1,4 | Channel Enable Input Active High for XRP2526-1 and Active Low for XRP2526-2 |
| FLG _x | 2,3 | Error Flag Signal Active low open drain output. Active on over-current, over-temperature or UVLO conditions. |
| GND | 6 | Ground Signal |
| IN | 7 | Voltage Input Pin |
| OUT _x | 5,8 | Voltage Output Pin |

ORDERING INFORMATION

| Part Number | Temperature Range | Marking | Package | Packing Quantity | Note 1 | Note 2 |
|-----------------|--------------------------------|-----------------------|---------|------------------|----------------------------|----------------------------|

THEORY OF OPERATION

The XRP2525 and XRP2526 devices are respectively single and dual channel integrated high-side power distribution switches that can be used in any self or bus powered USB applications. They are compliant with the latest USB 3.0 specifications. The reverse current protection feature prevents current to flow from OUT to IN when the device is disabled.

INPUT & OUTPUT

Placing bulk capacitances of at least 47 μ F and 10 μ F at the input and output pins respectively reduces power supply transients under heavy current load conditions.

It is important to place a 1 μ F ceramic bypass capacitor from IN to GND as close as possible to the device in order to control supply transients.

Furthermore, bypassing the output pin with a 0.1 μ F to 1 μ F ceramic capacitor improves the device response to short-circuit transients.

ERROR FLAG

The error flag signal (FLG_x output pin) is an open-drain output and is pulled low (active low) upon detection of the following conditions:

- Over-current condition
- Over-temperature condition
- Under voltage lockout condition

Over-temperature and under voltage lockout conditions are flagged immediately while the over – current condition is reported only if this condition persists continuously for longer than the blanking time of 10ms. The blanking time prevents erroneous reporting of current faults due to brief output current spikes.

Once activated, the error flag signal remains low until all fault conditions have been removed and is independent for each individual channel.

CURRENT LIMIT

The current limit threshold is preset internally. It protects the output MOSFET switches from

damages resulting from undesirable short circuit conditions or excess inrush current, which is often encountered during hot plug-in. The low limit of the current limit threshold of the XRP2525 and XRP2526 allows a minimum current of 0.9A through the MOSFET switches.

When an overcurrent condition is detected, the output current is limited to a constant current limit threshold value and output voltage is reduced accordingly. Triggering the current limit function is signaled by the Error Flag after 10ms of blanking time period.

UNDER-VOLTAGE LOCKOUT

Under-voltage lockout function (UVLO) keeps the internal power switch from being turned on until the power supply has reached at least 1.68V, even if the switch is enabled. Upon detection of an input voltage below approximately 1.68V, the power switch is turned off while a fault condition is reported by the error flag signal.

THERMAL PROTECTION

Internal thermal sensing circuitry monitors the operating temperature of the device for each channel independently. Upon detection of a temperature in excess of 135°C, the power switch for the given channel is disabled preventing any damages to the device while a fault condition is reported by the error flag signal. A built-in 10°C hysteresis allows the device to cool down to 125°C before resuming normal operations on the faulty channel at which point the error flag signal is cleared.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
