Function Diagrams

Undervoltage Control

Without memory ("No Memory" mode)

- Tt Time delay after crossing of threshold (adjustable on front panel from 0.3 s to 30 s)
- Un Nominal supply voltage
- U Monitored supply voltage
- H Hysteresis adjusted by means of a potentiometer graduated from 5...50% of the threshold setting
- U< Undervoltage threshold (set by means of a potentiometer graduated as a percentage of the scale value of Un)
- 11-12 Output, relays connections (refer to Connections and Schema)
- 21-22/21-24

Relay status: black color = energized.

Relay status: black color = energized.

In "Memory" mode, the relay opens when crossing of the threshold is detected and then stays in that position. The power supply voltage must be switched off to reset the product.
