

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

**MAX2630-MAX2633**

## General Description

The MAX2630/MAX2631/MAX2632/MAX2633 are low-voltage, low-noise amplifiers for use from VHF to microwave frequencies. Operating from a single +2.7V to +5.5V supply, these devices have a flat gain response to 900MHz. Their low noise figure and low supply current make them ideal for receive, buffer, and transmit IF applications.

The MAX2630/MAX2631 are biased internally, eliminating the need for external bias resistors or inductors. The MAX2632/MAX2633 have a user-selectable supply current, which can be adjusted by adding a single external resistor. This allows customized output power and gain according to specific applications requirements. The MAX2631/MAX2633 feature a shutdown pin that allows them to be powered down to less than 1 $\mu$ A supply current. Aside from a single bias resistor required for the MAX2632/MAX2633, the only external components needed for this family of amplifiers are input and output blocking capacitors and a V<sub>CC</sub> bypass capacitor.

The MAX2630 comes in a 4-pin SOT143 package, requiring minimal board space. The MAX2631/MAX2632 come in small 5-pin SOT23 packages. The MAX2633 comes in a 6-pin SOT23 package.

## Applications

|                                |                 |
|--------------------------------|-----------------|
| Personal Communicating Systems | Cordless Phones |
| Global Positioning Systems     | Cellular Phones |
| Wireless Local Area Networks   | ISM Radios      |
| Wireless Local Loops           | TV Tuners       |
| Land Mobile Radios             | Set-Top Boxes   |

## Typical Operating Circuit

## Features

- ◆ Single +2.7V to +5.5V Operation
- ◆ Internally Biased (MAX2630/MAX2631)
- ◆ Adjustable Bias (MAX2632/MAX2633)
- ◆ 6.6mA Supply Current (insensitive to supply voltage)
- ◆ 1 $\mu$ A Shutdown Current (MAX2631/MAX2633)
- ◆ 3.7dB Noise Figure
- ◆ 13.4dB Gain
- ◆ Ultra-Small SOT Packages

## Ordering Information

| PART         | TEMP RANGE     | PIN-PACKAGE | SOT TOP MARK* |
|--------------|----------------|-------------|---------------|
| MAX2630EUS-T | -40°C to +85°C | 4 SOT143-4  | DG__          |
| MAX2631EUK-T | -40°C to +85°C | 5 SOT23-5   | AABK          |
| MAX2632EUK-T | -40°C to +85°C | 5 SOT23-5   | AABL          |
| MAX2633EUT-T | -40°C to +85°C | 6 SOT23-6   | AAAA          |

\*The first two letters in the SOT top mark identify the part, while the remaining two letters are the lot-tracking code.

## Pin Configurations

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

## ABSOLUTE MAXIMUM RATINGS

V<sub>CC</sub> to GND .....-0.3V to 6V  
 Input Power .....5dBm  
 OUT Current .....±12mA  
 IN to GND Voltage .....-1.2V to 1.2V  
 Bias to GND Voltage .....0.0V to 3V  
 Voltage at SHDN Input  
 (MAX2631/MAX2633) .....-0.3V to (V<sub>CC</sub> + 0.3V)  
 Current into SHDN Input (MAX2631/MAX2633) .....100μA

Continuous Power Dissipation (T<sub>A</sub> = +70°C)  
 SOT143 (derate 4mW/°C above +70°C) .....320mW  
 SOT23-5 (derate 7.1mW/°C above +70°C) .....571mW  
 SOT23-6 (derate 7.1mW/°C above +70°C) .....571mW  
 Operating Temperature Range .....-40°C to +85°C  
 Junction Temperature .....+150°C  
 Storage Temperature Range .....-65°C to +150°C  
 Lead Temperature (soldering, 10s) .....+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**CAUTION!** ESD SENSITIVE DEVICE

## ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = +3V, Z<sub>0</sub> = 50Ω, f<sub>IN</sub> = 900MHz, R<sub>BIAS</sub> = 10kΩ (MAX2632/MAX2633), V<sub>SHDN</sub> = V<sub>CC</sub> (MAX2631/MAX2633), T<sub>A</sub> = +25°C, unless otherwise noted.)

# VHF-to-Microwave, +3V, General-Purpose Amplifiers

MAX2630-MAX2633

## Detailed Description

The MAX2630-MAX2633 are broadband amplifiers with 3dB bandwidth greater than 1GHz. Their small size and internal bias circuitry make them ideal for applications where board space is limited. The MAX2632/MAX2633 have a user-selectable bias current that allows the user to set both gain and output power for a particular application, and the MAX2631/MAX2633 incorporate shut-down capability.

## Applications Information

### External Components

The MAX2630-MAX2633 are easy to use, as shown in the *Typical Operating Circuit* and Figures 1, 2 and 3. Input and output series capacitors may be necessary to block DC bias voltages generated by the amplifiers from interacting with adjacent circuitry. These capacitors must be large enough to contribute negligible reactance in a 50Ω system at the minimum operating frequency. Use the following equation to calculate their minimum value:

$$C_{\text{BLOCK}} = \frac{53,000}{f} \text{ (pF)}$$

where  $f$  (in megahertz) is the minimum operating frequency.

The  $V_{CC}$  pin must be RF bypassed for correct operation. To accomplish this, connect a capacitor between the  $V_{CC}$  pin and ground, as close to the package as is practical. Use the same equation given above (for DC-blocking capacitor values) to calculate the minimum capacitor value. If the PC board has long  $V_{CC}$  lines, additional bypassing may be necessary. This can be done farther away from the package, if needed.

Proper grounding of the GND pin is essential. If the PC board uses a topside RF ground, connect it directly to the GND pin. For a board where the ground plane is not on the component side, the best technique is to connect the GND pin to it with a plated through-hole close to the package.

An on-chip buffer at the MAX2631/MAX2633's SHDN pin makes bypassing this pin unnecessary except in very noisy applications. When RF filtering is needed, use a bypass capacitor similar to the one used on  $V_{CC}$ . Since negligible current flows into this pin, additional RF filtering may be done with a series resistor.

To set the MAX2632/MAX2633's supply current, connect a resistor from the BIAS pin to ground. To estimate the value of this resistor, refer to the graph Supply Current vs.  $R_{\text{BIAS}}$  in the *Typical Operating Characteristics*.

## PC Board Layout Example

Example PC board layouts are given in Figures 4 to 7. They use FR-4 with a 31mil layer thickness between the RF lines and the ground plane. The boards satisfy all of the above recommendations.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
