- Notes:**
- The max ET is calculated to limit the core loss and temperature rise at 100kHz based on a bipolar flux swing of 2100Ga Peak. This value needs to be derated for higher frequencies using the temperature rise calculation.
 - The temperature rise of the component is calculated based on the total core loss and copper loss:
 - To calculate total copper loss (W), use the following formula:
Copper Loss (W) = $I_{rms}^2 * (DCR_Drive + (\# \text{ of Gates}) * DCR_Gates)$
 - To calculate total core loss (W), use the following formula:
Copper Loss (W) = $5.1E-10 * (\text{Frequency in kHz})^{1.42} * (K1 * ET)^{2.5}$
Where $ET = (V * \text{Duty Cycle}) / \text{Frequency}$
 - To calculate temperature rise, use the following formula:
Temperature Rise (C) = $71 * (\text{Core Loss(W)} + \text{Copper Loss (W)})$
 - Continuous isolation voltage confirmed by 125°C/1000hrs accelerated aging with the bias voltage applied between gate and drive windings.
 - ANL versions, which use triple insulated wire on both the drive and gate windings, are compliant with IEC 60950, IEC 61558, IEC 61010 & IEC 60601 for reinforced insulation. NL versions, which use triple insulated wire on just the drive winding, comply with basic insulation requirements.
 - 12mm package creepage distance satisfies IEC60950-1 & IEC61558-1/-2-16 reinforced insulation requirements for working voltage to 600Vrms max, OVC II, Pollution Degree 2 and altitude up to 2000m.
 - Unless otherwise specified, all testing is made at 100kHz, 0.1V_{AC}.
 - Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PH9400.111NL becomes PH9400.111NLT). Pulse complies to industry standard tape and reel specification EIA481.
