

30MHz, High Output Current Operational Transconductance Amplifier (OTA)

The CA3094 is a differential input power control switch/amplifier with auxiliary circuit features for ease of programmability. For example, an error or unbalance signal can be amplified by the CA3094 to provide an on-off signal or proportional control output signal up to 100mA. This signal is sufficient to directly drive high current thyristors, relays, DC loads, or power transistors. The CA3094 has the generic characteristics of the CA3080 operational amplifier directly coupled to an integral Darlington power transistor capable of sinking or driving currents up to 100mA.

The gain of the differential input stage is proportional to the amplifier bias current (I_{ABC}), permitting programmable variation of the integrated circuit sensitivity with either digital and/or analog programming signals. For example, at an I_{ABC} of 100 μ A, a 1mV change at the input will change the output from 0 to 100 μ A (typical).

The CA3094 is intended for operation up to 24V and is especially useful for timing circuits, in automotive equipment, and in other applications where operation up to 24V is a primary design requirement (see Figures 28, 29 and 30 in Typical Applications text). The CA3094A and CA3094B are like the CA3094 but are intended for operation up to 36V and 44V, respectively (single or dual supply).

Ordering Information

PART NUMBER (BRAND)	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
CA3094AT, BT	-55 to 125	8 Pin Metal Can	T8.C
CA3094E, AE	-55 to 125	8 Ld PDIP	E8.3
CA3094M, BM	-55 to 125	8 Ld SOIC	M8.15

Features

- CA3094E, M for Operation Up to 24V
- CA3094AT, E, M for Operation Up to 36V
- CA3094BT, M for Operation Up to 44V
- Designed for Single or Dual Power Supply
- Programmable: Strobing, Gating, Squelching, AGC Capabilities
- Can Deliver 3W (Average) or 10W (Peak) to External Load (in Switching Mode)
- High Power, Single Ended Class A Amplifier will Deliver Power Output of 0.6W (1.6W Device Dissipation)
- Total Harmonic Distortion (THD) at 0.6W in Class A Operation 1.4% (Typ)

Applications

- Error Signal Detector: Temperature Control with Thermistor Sensor; Speed Control for Shunt Wound DC Motor
- Over Current, Over Voltage, Over Temperature Protectors
- Dual Tracking Power Supply with CA3085
- Wide Frequency Range Oscillator
- Analog Timer
- Level Detector
- Alarm Systems
- Voltage Follower
- Ramp Voltage Generator
- High Power Comparator
- Ground Fault Interrupter (GFI) Circuits

Absolute Maximum Ratings

Supply Voltage (Between V+ and V- Terminals)	
CA3094	24V
CA3094A	36V
CA3094B	44V
Differential Input Voltage (Terminals 2 and 3, Note 1)	
DC Input Voltage	V+ to V-
Input Current (Terminals 2 and 3)	±1mA
Amplifier Bias Current (Terminal 5)	2mA
Average Output Current	100mA
Peak Output Current	300mA

Thermal Information

Thermal Resistance (Typical, Note 2)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
PDIP Package	130	N/A
SOIC Package	170	N/A
Metal Can Package	175	100
Maximum Junction Temperature (Metal Can Package)		
Maximum Junction Temperature (Plastic Package)		
Maximum Storage Temperature Range		
Maximum Lead Temperature (Soldering 10s)		
(SOIC - Lead Tips Only)		

Operating Conditions

Temperature Range -55°C to 125°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- Exceeding this voltage rating will not damage the device unless the peak input signal current (1mA) is also exceeded.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications $T_A = 25^\circ\text{C}$ for Equipment Design. Single Supply $V_+ = 30\text{V}$, Dual Supply $V_{\text{SUPPLY}} = \pm 15\text{V}$, $I_{ABC} = 100\mu\text{A}$ Unless Otherwise Specified

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNITS

"Sink"	8	3	2

Operating Considerations

The "Sink" Output (Terminal 8) and the "Drive" Output (Terminal 6) of the CA3094 are not inherently current (or power) limited. Therefore, if a load is connected between Terminal 6 and Terminal 4 (V- or Ground), it is important to connect a current limiting resistor between Terminal 8 and Terminal 7 (V+) to protect transistor Q13 under shorted load conditions. Similarly, if a load is connected between Terminal 8 and Terminal 7 (V+), the current limiting resistor should be connected between Terminal 6 and Terminal 4 or ground. In circuit applications where the emitter of the output transistor is not connected to the most negative potential in the system, it is recommended that a 100Ω current limiting resistor be inserted between Terminal 7 and the V+ supply.

1/f Noise Measurement Circuit

When using the CA3094, A, or B audio amplifier circuits, it is frequently necessary to consider the noise performance of the device. Noise measurements are made in the circuit shown in Figure 20. This circuit is a 30dB, non-inverting amplifier with emitter follower output and phase compensation from Terminal 2 to ground. Source resistors (R_S) are set to 0Ω or 1MΩ for E noise and I noise measurements, respectively. These measurements are made at frequencies of 10Hz, 100Hz and 1kHz with a 1Hz measurement bandwidth. Typical values for 1/f noise at 10Hz and 50μA I_{ABC} are:

$$E_N = 18\text{nV}/\sqrt{\text{Hz}} \quad \text{and} \quad I_N = 1.8\text{pA}/\sqrt{\text{Hz}}.$$

Test Circuits

FIGURE 1. INPUT OFFSET VOLTAGE AND POWER SUPPLY REJECTION TEST CIRCUIT

NOTES:

3. Input Offset Voltage: $V_{IO} = \frac{E_{OUT}}{100}$.
4. For Power Supply Rejection Test: (1) vary V+ by -2V; then (2) vary V- by +2V.

5. Equations:

$$(1) \text{ V+ Rejection} = \frac{E_{0OUT} - E_{1OUT}}{200}$$

$$(2) \text{ V- Rejection} = \frac{E_{0OUT} - E_{2OUT}}{200}$$

$$6. \text{ Power Supply Rejection: (dB)} = 20 \log \frac{1}{\text{REJECTION}^\dagger}$$

† Maximum Reading of Step 1 or Step 2

NOTES:

7. $P_{DISSIPATION} = (V+)(I)$
8. $I_{OS} = \frac{E_{OUT}}{10^6 \frac{\text{VOLTS}}{\text{AMPS}}}$

Application Information

For additional application information, refer to Application Note AN6048, "Some Applications of a Programmable Power/Switch Amplifier IC" and AN6077 "An IC Operational Transconductance Amplifier (OTA) with Power Capability".

Design Considerations

The selection of the optimum amplifier bias current (I_{ABC}) depends on:

1. The Desired Sensitivity - The higher the I_{ABC} , the higher the sensitivity, i.e., a greater drive current capability at the output for a specific voltage change at the input.
2. Required Input Resistance - The lower the I_{ABC} , the higher the input resistance.

If the desired sensitivity and required input resistance are not known and are to be experimentally determined, or the anticipated equipment design is sufficiently flexible to tolerate a wide range of these parameters, it is recommended that the equipment designer begin his calculations with an I_{ABC} of 100μA, since the CA3094 is characterized at this value of amplifier bias current.

The CA3094 is extremely versatile and can be used in a wide variety of applications.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
