

SIGNAL LEVEL SENSOR SYSTEM

■ GENERAL DESCRIPTION

The **NJU7181** is a signal level sensor system IC. It sends a High flag to the microprocessor or other equipments whenever it detects the existence of the audio signal.

The **NJU7181** includes a delay circuit which allows the IC continue to hold the flag after the absence of the audio signal. This holding time can be adjusted with external capacitor.

Together with its adjustable Input Sensitivity (*by external resistor*) & its characteristic of low current consumption and low operating voltage, **NJU7181** is suitable for Eco-Design of Energy-using Products and for battery operated applications.

■ PACKAGE OUTLINE

NJU7181RB1
MSOP8 (TVSP8)

NJU7181KU1

■ FEATURES

- Operating Voltage 0.9 to 5.5V
 - Low Operating Current 55µA typ.
 - Delay circuit for long Recovery time
 - Adjustable Recovery time by external capacitor
 - Adjustable Input Sensitivity by external resistance
 - C-MOS Technology
 - Package Outline MSOP8 (TVSP8)*
ESON8
- *MEET JEDEC MO-187-DA / THIN TYPE

■ APPLICATIONS

- Power Saving for battery operated devices
- Muting Application
- Memory saving for recording devices
- Half- duplex transmission application

■ APPLICATION NOTE

- **DC Output Waveform Scenario**

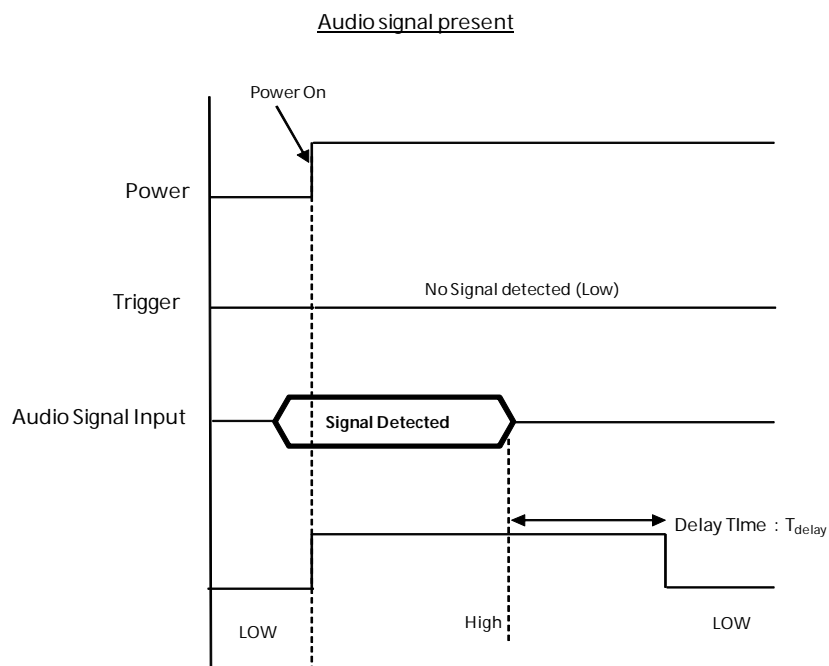

Scenario 1: Power-ON

– Output will be high initially when NJU7181 is first powered up even if there is no input signal detected.

Scenario 2: Only Audio Signal detected

– Output will be or maintain high when **either an input signal or trigger signal is detected**. The delay circuit will only be activated **when both signals is not present**. NJU7181 will then hold the output level for a delay time which can be adjusted by the Capacitor value @ pin 5.

Scenario 3: Trigger Signal detected (Case 1)

– Output will be or maintain high when **either an input signal or trigger signal is detected**. The delay circuit will only be activated **when both signals is not present**. Output is set to Low state when a delay time passes. Output is set to High state when either an input signal or trigger signal is detected again.

Case 1: Trigger signal present (After output LOW)

Scenario 4: Trigger Signal detected (Case 2)

– Output will be or maintain high when **either an input signal or trigger signal is detected**. When hold time is shorter than a delay time, output maintains High state (Counter RESET). NJU7181 will then hold the output level for a delay time which can be adjusted by the Capacitor value @ pin 5.

Case 2: Trigger signal present (During output HIGH)

When hold time is shorter than T_{delay} , DC_Output maintains High state. (Counter RESET)

◆ Input Sensitivity [Ta =25°C]

The input sensitivity is defined as follows.

$$V_{INS}=20*\log(R1/R2) - 21.5 \text{ [dBV]} \text{ ---- (1)}$$

Note) The input sensitivity recommends the setting of -60dBV (1mVrms) or more.

Note) The R2 value should be 100kΩ or more.

◆ Frequency Response

The input capacitor “Ci” forms HPF with “R1”. The cut-off frequency is defined as follows. Please decide C1 value in consideration of the frequency response necessary for the signal-detecting.

$$f_c=1/(2\pi\times C_i\times R_1) \text{ [Hz]} \text{ ---- (2)}$$

◆ Delay time [With R_D = 220Kohm]

The Recovery time is defined as follows.

$$T_{\text{delay}}=1.5*10^8*C_R \text{ [sec]} \text{ ---- (3)}$$

■ TERMINAL DESCRIPTION

Terminal	SYMBOL	FUNCTION	EQUIVALENT CIRCUIT	VOLTAGE
1	IN	AC Input		0.3V
2	AMP_OUT	Amplifier Output		0.3V
3	TRIN	External Trigger Input		-
5	CAP_D	Delay Time Capacitor		0V

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
