

## FEATURES

- **On-Chip ESD Protection:**
  - ±15kV Human Body Model
  - ±15kV IEC-1000-4-2 Air Gap Test\*\*
  - ±8kV IEC-1000-4-2 Contact Test
- **125kBd Operation with 3kΩ/2500pF Load**
- **250kBd Operation with 3kΩ/1000pF Load**
- **Outputs Can Be Driven ±30V Without Damage**
- **No Supply Current in Shutdown**
- Operates from ±5V to ±15V Supplies
- Fully Protected Against Overload
- Three-State Outputs; Outputs Open When Off
- Bipolar Circuit—No Latchup
- ±30V Input Range
- Triple Driver/Receiver
- 30kΩ Input Impedance
- Meets All RS232 Specifications
- 16-Pin Version—Pin Compatible with MC145406
- Available in SO Package

## APPLICATIONS

- RS232 Interface
- Terminals
- Modems

## TYPICAL APPLICATION

## DESCRIPTION

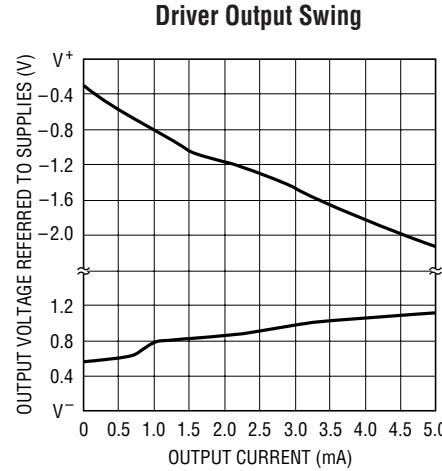

The LT®1039A is a triple RS232 driver/receiver that includes shutdown. Each receiver will accept up to ±30V input and can drive either TTL or CMOS logic. The RS232 drivers accept TTL logic inputs and output RS232 voltage levels. The outputs are fully protected against overload and can be shorted to ground or up to ±30V without damage to the drivers. Additionally, when the system is shut down or power is off, the outputs are in a high impedance state allowing data line sharing. On-chip ESD protection eliminates the need for external protection devices.

A bias pin allows one receiver to be kept on while the rest of the part is shut down.

The LT1039A is also available in the 16-pin version, without shutdown or bias pin functions.

For applications requiring operation from a single 5V supply, see the LT1180A/LT1181A and LT1130A data sheets.

## PIN FUNCTIONS (Pin numbers listed are for 18-pin device)

**V<sup>+</sup>, V<sup>-</sup> (Pins 1, 9):** Driver Supply Pins. Supply current drops to zero in shutdown mode. Driver outputs are in a high impedance state when V<sup>+</sup> and V<sup>-</sup> = 0V.

**BIAS (Pin 2):** Keeps receiver 1 on while the LT1039A is in the shutdown mode. Leave BIAS pin open when not in use. See Applications Information for proper use.

**REC IN (Pins 3, 5, 7):** Receiver Input Pins. Accepts RS232 voltage levels ( $\pm 30V$ ) and has 0.4V of hysteresis to provide noise immunity. Input impedance is nominally 30k $\Omega$ . Receiver input pins are internally protected from ESD transients. In order to insure proper functioning of the ESD protection devices, the V<sub>CC</sub> and V<sup>-</sup> supply pins must be bypassed with low ESR capacitors located close to the pins. A 0.1 $\mu$ F ceramic capacitor works well.

**TR OUT (Pins 4, 6, 8):** Driver Outputs with RS232 Voltage Levels. Outputs are in a high impedance state when in the shutdown mode or when power is off (V<sup>+</sup> and V<sup>-</sup> = 0V) to allow data line sharing. Outputs are fully short-circuit protected from V<sup>-</sup> + 30V to V<sup>+</sup> - 30V with power on, off or in the shutdown mode. Typical output breakdowns are greater than  $\pm 45V$  and higher applied voltages will not damage the device if moderately current limited. Driver

output pins are internally protected from ESD transients. In order to insure proper functioning of the ESD protection devices, the V<sup>+</sup> and V<sup>-</sup> supply pins must be bypassed with low ESR capacitors located close to the pins. 0.1 $\mu$ F ceramic capacitors work well.

**GND (Pin 10):** Ground Pin.

**TR IN (Pins 11, 13, 15):** RS232 Driver Input Pins. Inputs are TTL/CMOS compatible. Inputs should not be allowed to float. Tie unused inputs to V<sub>CC</sub>.

**REC OUT (Pins 12, 14, 16):** Receiver Outputs with TTL/CMOS Voltage Levels. Outputs are in a high impedance state when in the shutdown mode to allow data line sharing. Outputs are fully short-circuit protected to ground or V<sub>CC</sub> with power on, off or in the shutdown mode.

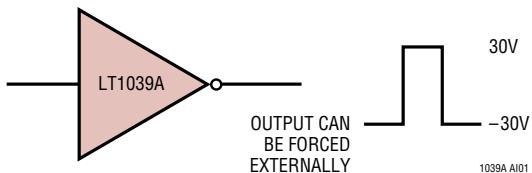

**ON/OFF (Pin 17):** Controls the operation mode of the LT1039A and is TTL/CMOS compatible. A logic low puts the device in the shutdown mode which reduces input supply current to zero and places both driver and receiver outputs in a high impedance state.

**V<sub>CC</sub> (Pin 18):** 5V Power for Receivers.

## APPLICATIONS INFORMATION

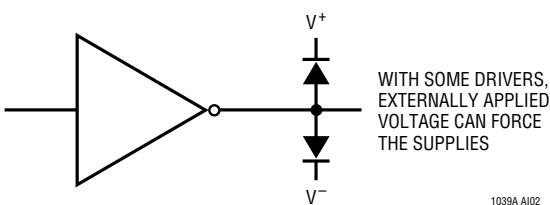

The driver output stage of the LT1039A offers significantly improved protection over older bipolar and CMOS designs. In addition to current limiting, the driver output can be externally forced to  $\pm 30V$  with no damage or excessive current flow.

**LT1039A Driver**

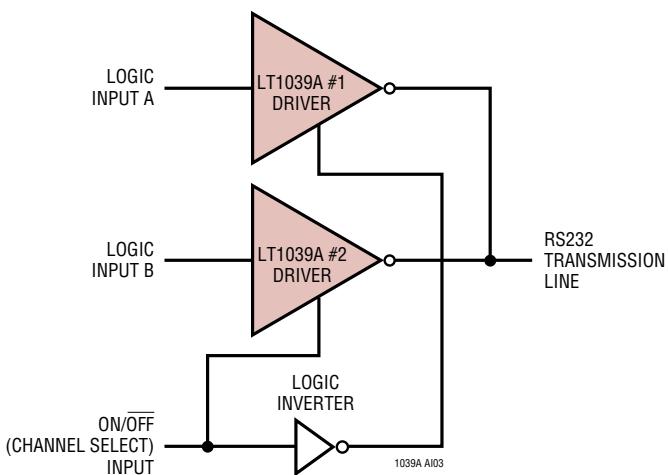

The driver outputs utilize high impedance overvoltage protection, eliminating the flow of fault currents into supplies, as will happen with conventional diode clamp configurations.

**Older RS232 Drivers and Other CMOS Drivers**

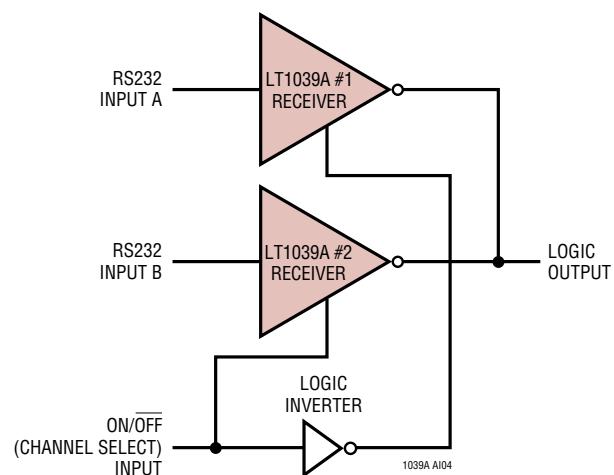

Placing the LT1039A in the shutdown mode (Pin 17 low) puts both the driver and receiver outputs in a high impedance state. This allows data line sharing and transceiver applications.

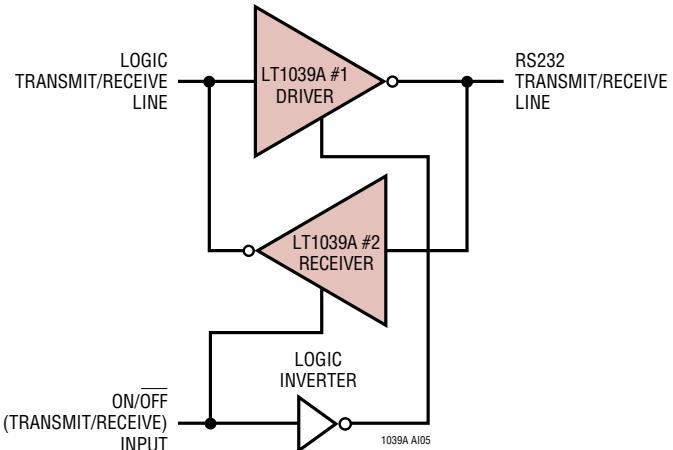

**Sharing a Transmitter Line**

**Sharing a Receiver Line**

**Transceiver**

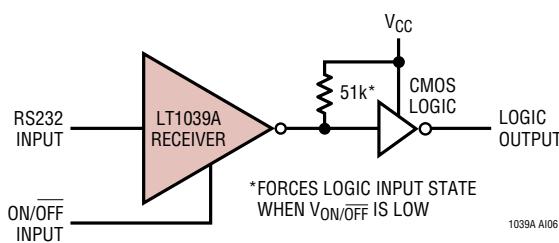

The shutdown mode also drops all supply currents ( $V_{CC}$ ,  $V^+$ ,  $V^-$ ) to zero for power conscious systems.

## APPLICATIONS INFORMATION

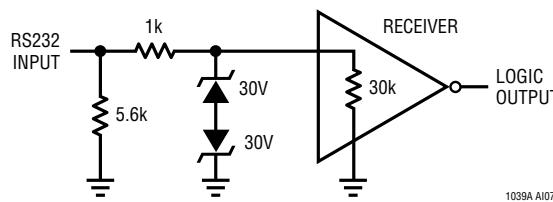

When driving CMOS logic from a receiver that will be used in the shutdown mode and there is no other active receiver on the line, a 51k resistor can be placed from the logic input to V<sub>CC</sub> to force a definite logic level when the receiver output is in a high impedance state.

### Driving CMOS Logic from a Receiver

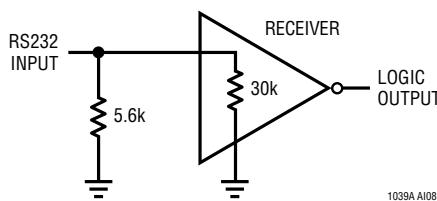

To protect against receiver input overloads in excess of  $\pm 30V$ , a voltage clamp can be placed on the data line and still maintain RS232 compatibility.

### Input Overvoltage Protection

The receiver input impedance of the LT1039A is nominally  $30k\Omega$ . For applications requiring a  $5k\Omega$  input impedance, a 5.6k resistor can be connected from the receiver input to ground.

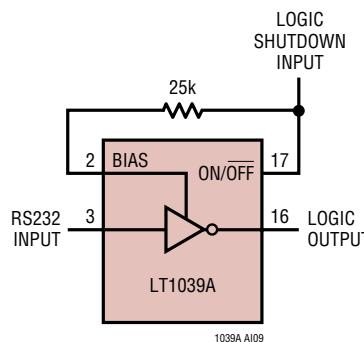

### 5kΩ Impedance Matching

Driver inputs should not be allowed to float. Any unused inputs should be tied to V<sub>CC</sub>.

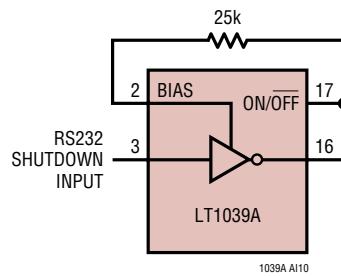

The BIAS pin is used to “keep alive” one receiver while in the shutdown mode (all other circuitry being inactive). This allows a system to be in shutdown and still have one active receiver for transferring data.

### Keeping Alive One Receiver While in Shutdown

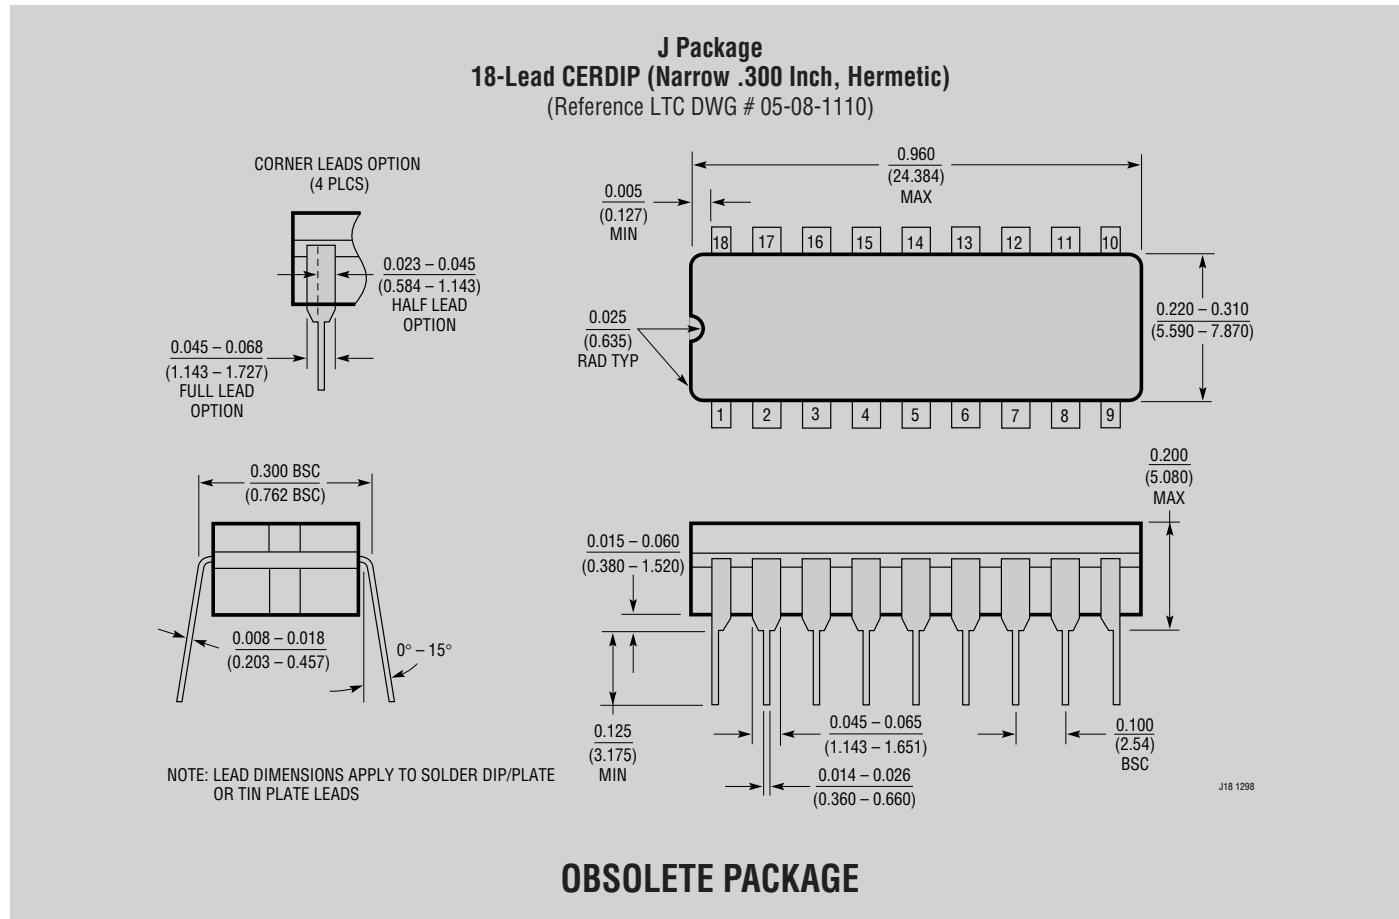

It can also be used to make an RS232 compatible shutdown control line. Driving the BIAS pin low through a resistance of 24k to 30k keeps the receiver active. Do not drive the BIAS pin directly from a logic output without the series resistor. An unused BIAS pin should be left open.

### RS232 Compatible Shutdown Control Line

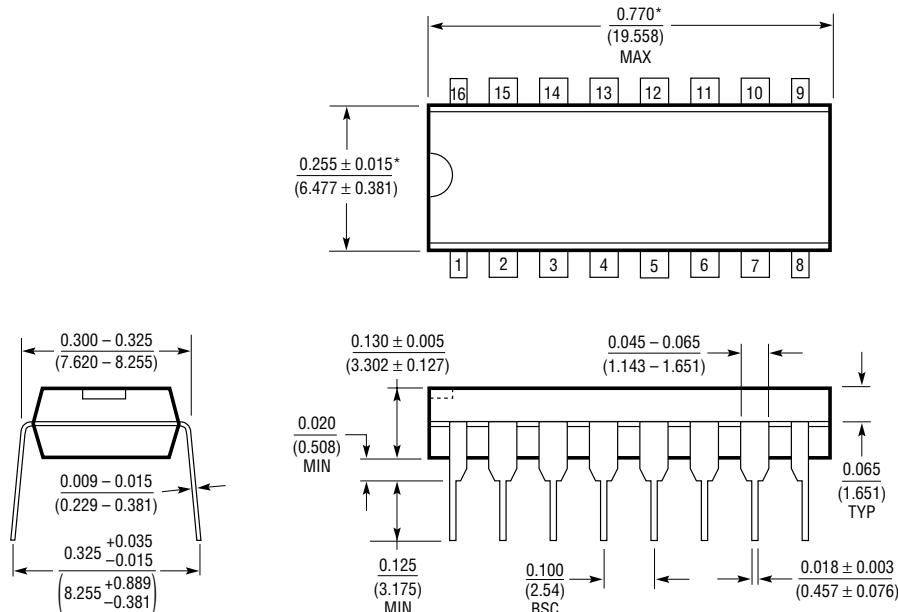

## PACKAGE DESCRIPTION

## PACKAGE DESCRIPTION

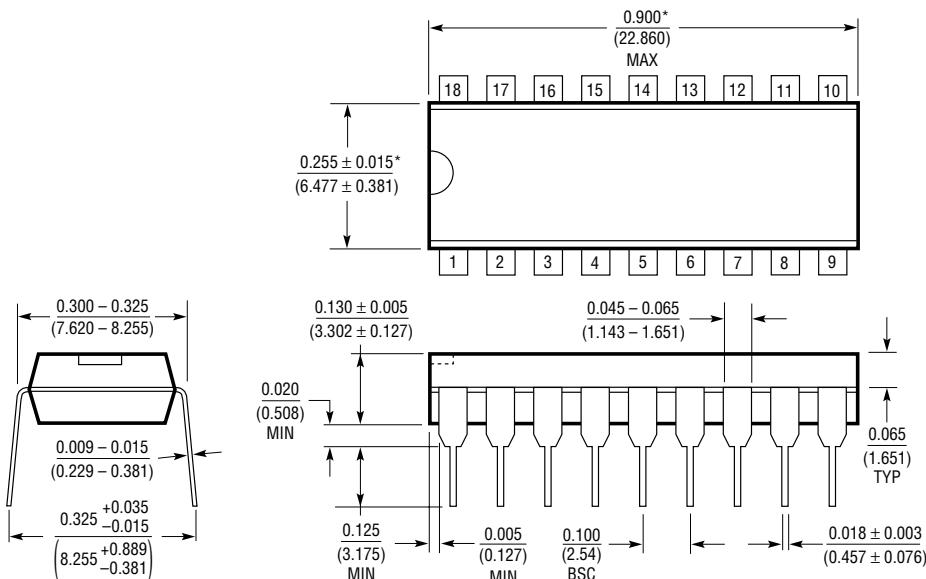

**N Package**  
**16-Lead PDIP (Narrow .300 Inch)**  
(Reference LTC DWG # 05-08-1510)

\*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.010 INCH (0.254mm)

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
