

Description

The ZXRE250 and ZXRE252 are three-terminal adjustable shunt regulators that offer excellent temperature stability and output current handling capability up to 100mA. The output voltage may be set to any chosen voltage between 2.5V and 36V by selection of two external divider resistors.

ZXRE250 has the same electrical specifications as the industry standard '431 except it features a very-low minimum cathode current for regulation. The typical value of 40µA makes the parts ideal for very low-power applications.

The devices can be used as a replacement for zener diodes in many applications requiring an improvement in zener performance. The ZXRE250/2 is available in two grades with initial tolerances of 1% and 0.5% for the A and B grades respectively.

Electrical Characteristics (continued) (@T_A = +25°C, unless otherwise specified.)

The average temperature coefficient of the reference input voltage αV_{REF} is defined as:

$$|\alpha V_{REF}| = \frac{\left(\frac{V_{DEV}}{V_{REF @ 25^\circ C}} \right) \times 10^6}{T_2 - T_1} \text{ ppm/}^\circ\text{C}$$

Where:
 T₂ - T₁ = full temperature change.
 αV_{REF} can be positive or negative depending on whether the slope is positive or negative.

Note : 8. The dynamic output impedance, R_z, is defined as:

$$|Z_{KA}| = \frac{\Delta V_{KA}}{\Delta I_{KA}}$$

When the device is programmed with two external resistors R₁ and R₂, the dynamic output impedance of the overall circuit, is defined as:

$$|Z'| = \frac{\Delta V}{\Delta I} \approx |Z_{KA}| \left(1 + \frac{R_1}{R_2} \right)$$
