

DATA SHEET

CLA Series: Silicon Limiter Diodes, Packaged and Bondable Chips

Applications

- Limiters

Features

- Established Skyworks limiter diode process
- High power, mid-range, and cleanup designs
- Low insertion loss: 0.1 dB @ 10 GHz
- Power handling to +66 dBm
- Tight control of I layer base width
- Mesa and planar chip designs

NEW

Skyworks Green™ products are RoHS (Restriction of Hazardous Substances)-compliant, conform to the EIA/EICTA/JEITA Joint Industry Guide (JIG) Level A guidelines, are halogen free according to IEC-61249-2-21, and contain <1,000 ppm antimony trioxide in polymeric materials.

Description

Skyworks CLA series of silicon limiter diodes provides passive receiver protection over a wide range of frequencies from 100 MHz to over 30 GHz. These devices use Skyworks well-established silicon technology resulting in high resistivity and tightly controlled base width PIN limiter diodes. Limiter circuits using these devices perform with strong limiting action and low loss.

The CLA series consists of nine individual chip designs of different intrinsic region base widths and capacitances designed to accommodate multi-stage limiter applications. The mesa-constructed, thin base width, low capacitance CLA4601-000, CLA4602-000, CLA4604-000, and CLA4605-000 are designed for low-level and cleanup applications. The CLA4603-000 and CLA4606-000 through CLA4608-000 are planar designs designated for high-power and mid-range applications.

The CLA4609-000 thick base width mesa diode is designed for coarse limiter-stage applications.

The absolute maximum ratings of the CLA diode series are provided in Table 1. Electrical specifications are specified in Table 2. Typical performance characteristics are provided in Table 3 and Figures 1 through 5. Table 4 identifies the die part numbers with their corresponding top contact diameters and die outline drawings. Table 5 identifies the hermetic part numbers together with their thermal resistance specifications and hermetic outline drawings.

Table 1. CLA Series Absolute Maximum Ratings

| Parameter | Symbol | Minimum | Typical | Maximum | Units |
|----------------------|-----------|---------|---------|--|-------|
| Power dissipation | P_{DIS} | | | $\frac{\text{Maximum } T_J - \text{Case Temp}}{\text{Thermal Resistance}_{\text{junction-to-case}}}$ | W |
| Reverse voltage | V_R | | | Minimum rated breakdown voltage | V |
| Forward current | I_F | | | 200 | mA |
| Junction temperature | T_J | -65 | | +175 | °C |
| Storage temperature | T_{STG} | -65 | | +200 | °C |

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Table 2. CLA Series Electrical Specifications (Note 1)

($T_{OP} = +25\text{ °C}$, C_J Measured at 1 MHz, R_S Measured at 500 MHz, CW Thermal Resistance for Infinite Heat Sink, Pulse Thermal Resistance for Single 1 μs Pulse, Unless Otherwise Noted)

| Part Number | Breakdown Voltage (V) | I Region (μm) | Junction Capacitance (C_J) @ 0 V (pF) | Junction Capacitance (C_J) @ 6 V (pF) | Series Resistance (R_S) @ 10 mA (Ω) | Minority Carrier Lifetime (T_L) @ 10 mA (ns) | Thermal Impedance (θ) | |
|-------------|-----------------------|----------------------------|---|---|--|--|--------------------------------|------------------------------|
| | | | | | | | Average (°C/W) | 1 μs Pulse (°C/W) |
| | Min – Max | Nominal | Typical | Maximum | Maximum | Typical | Maximum | Typical |
| CLA4601-000 | 15 – 30 | 1 | 0.12 | 0.10 | 2.5 | 5 | 120 | 15 |
| CLA4602-000 | 15 – 30 | 1 | 0.20 | 0.15 | 2.0 | 5 | 80 | 10 |
| CLA4603-000 | 20 – 45 | 1.5 | 0.20 | 0.15 | 2.0 | 5 | 100 | 10 |
| CLA4604-000 | 30 – 60 | 2.0 | 0.12 | 0.10 | 2.5 | 7 | 100 | 10 |
| CLA4605-000 | 30 – 60 | 2.0 | 0.20 | 0.15 | 2.0 | 7 | 70 | 7.0 |
| CLA4606-000 | 45 – 75 | 2.5 | 0.20 | 0.15 | 2.0 | 10 | 80 | 7.0 |
| CLA4607-000 | 120 – 180 | 7.0 | 0.20 | 0.15 @ 50 V | 2.0 | 50 | 40 | 1.2 |
| CLA4608-000 | 120 – 180 | 7.0 | 0.80 | 0.50 @ 50 V | 1.2 | 100 | 15 | 0.3 |
| CLA4609-000 | 250 (Min.) | 28 | 0.26 | 0.14 | 1.5 | 1175 | 15 | 0.3 |

Note 1: Performance is guaranteed only under the conditions listed in this Table and is not guaranteed over the full operating or storage temperature ranges. Operation at elevated temperatures may reduce reliability of the device.

Table 3. Typical Performance @ 25 °C

| Part Number | Insertion Loss @ -10 dBm (dB) | Input Power for 1 dB Loss (dBm) | Maximum Pulsed Input Power (dBm) | Output @ Maximum Pulsed Input (dBm) | Maximum CW Input power (W) | Recovery Time (ns) |
|-------------|-------------------------------|---------------------------------|----------------------------------|-------------------------------------|----------------------------|--------------------|
| CLA4601-000 | 0.1 | 7 | 47 | 21 | 2 | 5 |
| CLA4602-000 | 0.1 | 7 | 50 | 24 | 3 | 5 |
| CLA4603-000 | 0.1 | 10 | 50 | 22 | 2 | 10 |
| CLA4604-000 | 0.1 | 12 | 47 | 24 | 3 | 10 |

Technical Description

The CLA4603 and CLA4606 limiter diodes are constructed in a passivated flat-chip configuration and are available in a basic chip form or encapsulated in several Skyworks hermetic ceramic packages.

Limiter diodes with lower capacitance values to 0.08 pF and constructed with a passivated mesa configuration are available in the CLA4601 and CLA4605 series. The mesa devices offer low capacitance and, therefore, broader bandwidth, lower loss, and faster response at reduced power. These diodes are also available in chip package form and represent the ultimate in limiter performance not approached by other manufacturers.

The CLA4607 diodes (highest power) are available in both planar and mesa construction.

Figures 6 and 7 illustrate the fundamental structures of diodes mounted in a 50 Ω microstrip circuit.

Additional bonding and handling methods are contained in the Skyworks Application Notes, *Waffle Pack Chip Carrier Handling/Opening Procedure* (document #200146) and *Diode Chips, Beam-Lead Diodes, Capacitors: Bonding Methods and Packaging* (document #200146).

Basic Applications

In microstrip limiters, the bonding wire length and diameter together with the chip capacitance, form a low-pass filter (see Figure 8). Line lengths (X1 and X2) are varied to provide broadband matching and flat leakage characteristics. Typically, X1 and X2 are on the order of 0.1 wavelength. In Figure 9, the CLA4607 chip provides about 20 dB attenuation, reducing a 1 kW input signal to a 10 W output signal. The CLA4606 reduces this to 100 mW and the CLA4603 to about 20 mW.

During the rise time of the incident pulse, the diodes behave in the following manner. The CLA4603, due to its thin I region, is the first to change to a low impedance. Experiments indicate that the CLA4603 reaches the 10 dB isolation point in about 1 ns and 20 dB in 1.5 ns with an incident power of 10 W.

The CLA4606 takes about 4 ns and the CLA4607 about 50 ns to achieve 10 dB isolation. Consequently, the CLA4603 provides protection during the initial stages of pulse rise time with the thicker diodes progressively “turning on” as the power increases. With proper spacing (X1 and X2), the “on” diodes reflect high impedances to the upstream diodes, reducing the turn-on time for those diodes and ensuring that essentially all of the incident power is reflected by the input diode, preventing burnout of the thinner diodes.

At the end of the pulse the process reverses and the diodes “recover” to their high impedance states; the free charge that was injected into their I regions by the high-incident power signal leaks off through the ground return and is also reduced by internal recombination. With a ground return, recovery time is on the order of 50 ns. With a high impedance return (for example, the circuit shown in Figure 10), the Schottky diode (such as the CDF7621-000) recovers or “opens” in practically zero time. Internal recombination on the order of several diode lifetimes is the only available mechanism for recovery of the limiter diodes. This recovery time can be long – on the order of 1 ms for the CLA4607 series. The shunt resistor (R_R) minimizes the problem. One hundred Ohms approximately doubles the recovery time compared to a short circuit.

When the Schottky diode is directly coupled to the transmission line in cascade after the coarse limiter, the leakage power is less than if a 0 Ω ground return were used. If the Schottky is decoupled too much, the leakage power increases due to the high DC impedance of a Schottky. Similarly, a 3 Ω ground return causes an increase of about 3 dB in leakage power compared to a 0 Ω return.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
