

Voltage Detector with Separated Sense Pin & Delay Capacitor Pin

■ GENERAL DESCRIPTION

The XC6118 series is a low power consumption voltage detector with high accuracy detection, manufactured using CMOS process and laser trimming technologies.

Since the sense pin is separated from the power supply pin, it allows the IC to monitor the other power supply.

The XC6118 can maintain the state of detection even when voltage of the monitored power supply drops to 0V.

Moreover, a release delay time can be adjusted by the external capacitor connected to the Cd pin.

The V_{OUT} pin is available in both CMOS and N-channel open drain output configurations.

■ APPLICATIONS

- Microprocessor reset circuitry
- Charge voltage monitors
- Memory battery back-up switch circuits
- Power failure detection circuits

■ FEATURES

High Accuracy	: ±2% (Detect Voltage ≥ 1.5V) ±30mV (Detect Voltage < 1.5V)
Low Power Consumption	: 0.4 μA TYP. (Detect, V _{IN} =1.0V) 0.8 μA TYP. (Release, V _{IN} =1.0V)
Detect Voltage Range	: 0.8V ~ 5.0V (0.1V increments)
Operating Voltage Range	: 1.0V ~ 6.0V
Temperature Characteristics	: ±100ppm/°C TYP.
Output Configuration	: CMOS, N-channel open drain
Pin Function	: Power supply separation Release delay time adjustable
Operating Ambient Temperature	: -40°C ~ +85°C
Packages	: USP-4, SOT-25
Environmentally Friendly	: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUIT

■ TYPICAL PERFORMANCE CHARACTERISTICS

- Output Voltage vs. Sense Voltage

PIN CONFIGURATION

USP-4
(BOTTOM VIEW)

SOT-25
(TOP VIEW)

- * In the XC6118xxxA/B series, the dissipation pad should not be short-circuited with other pins.
- * In the XC6118xxxC/D series, when the dissipation pad is short-circuited with other pins, connect it to the NC pin (No.2) pin before use.

PIN ASSIGNMENT

PIN NUMBER		PIN NAME	FUNCTION
USP-4	SOT-25		
1	1	V _{OUT}	Output (Detect "L")
2	5	Cd	Delay Capacitance ^(*)
2	5	NC	No Connection
3	4	V _{SEN}	Sense
4	3	V _{IN}	Input
5	2	V _{SS}	Ground ^(*)

NOTE:

- *1: With the VSS pin of the USP-4 package, a tab on the backside is used as the pin No.5.
- *2: In the case of selecting no built-in delay capacitance pin type, the delay capacitance (Cd) pin will be used as the NC.

PRODUCT CLASSIFICATION

Ordering Information

XC6118①②③④⑤⑥-⑦^(*)

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Output Configuration	C	CMOS output
		N	N-ch open drain output
②③	Detect Voltage	08~50	e.g. 18 → 1.8V
④	Options	A	Built-in delay capacitance pin, hysteresis 5% (TYP.)(Standard*)
		B	Built-in delay capacitance pin, hysteresis less than 1%(Standard*)
		C	No built-in delay capacitance pin, hysteresis 5% (TYP.) (Semi-custom)
		D	No built-in delay capacitance pin, hysteresis less than 1% (Semi-custom)
⑤⑥-⑦	Packages (Order Unit)	GR-G	USP-4 (3,000/Reel)
		MR-G	SOT-25 (3,000/Reel)

*When delay function isn't used, open the delay capacitance pin before use.

^(*)The "-G" suffix denotes Halogen and Antimony free as well as being fully RoHS compliant.

■ BLOCK DIAGRAMS

(1) XC6118CxxA

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118CxxC (semi-custom).

(2) XC6118CxxB

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118CxxD (semi-custom).

(3) XC6118NxxA

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118NxxC (semi-custom).

(4) XC6118NxxB

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118NxxD (semi-custom).

* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

NOTE:

*1: When $V_{DF(T)} \leq 1.4V$, the detection accuracy is $\pm 30mV$.

When $V_{DF(T)} \geq 1.5V$, the detection accuracy is $\pm 2\%$.

Circuit 7

Circuit 8

Circuit 9

*No delay capacitance pin available in the XC6118xxxC/D series.

OPERATIONAL EXPLANATION

A typical circuit example is shown in Figure 1, and the timing chart of Figure 1 is shown in Figure 2.

*The XC6118N series (N-ch open drain output) requires a pull-up resistor for pulling up output.

Figure 1: Typical application circuit example

Figure 2: The timing chart of Figure 1

- ① As an early state, the sense pin is applied sufficiently high voltage (6.0V MAX.) and the delay capacitance (C_d) is charged to the power supply input voltage, (V_{IN} : 1.0V MIN., 6.0V MAX.). While the sense pin voltage (V_{SEN}) starts dropping to reach the detect voltage (V_{DF}) ($V_{SEN} > V_{DF}$), the output voltage (V_{OUT}) keeps the "High" level ($=V_{IN}$).
 * If a pull-up resistor of the XC6118N series (N-ch open drain) is connected to added power supply different from the input voltage pin, the "High" level will be a voltage value where the pull-up resistor is connected.
- ② When the sense pin voltage keeps dropping and becomes equal to the detect voltage ($V_{SEN} = V_{DF}$), an N-ch transistor (M_1) for the delay capacitance (C_d) discharge is turned ON, and starts to discharge the delay capacitance (C_d). An inverter (Inv.1) operates as a comparator of the reference voltage V_{IN} , and the output voltage changes into the "Low" level ($=V_{SS}$). The detect delay time [t_{DF}] is defined as time which ranges from $V_{SEN} = V_{DF}$ to the V_{OUT} of "Low" level (especially, when the C_d pin is not connected: t_{DF0}).
- ③ While the sense pin voltage keeps below the detect voltage, the delay capacitance (C_d) is discharged to the ground voltage ($=V_{SS}$) level. Then, the output voltage maintains the "Low" level while the sense pin voltage increases again to reach the release voltage ($V_{SEN} < V_{DF} + V_{HYS}$).

OPERATIONAL EXPLANATION (Continued)

- ④ When the sense pin voltage continues to increase up to the release voltage level ($V_{DF}+V_{HYS}$), the N-ch transistor (M1) for the delay capacitance (Cd) discharge will be turned OFF, and the delay capacitance (Cd) will start discharging via a delay resistor (R_{DELAY}). The inverter (Inv.1) will operate as a comparator (Rise Logic Threshold: $V_{TLH}=V_{TCD}$, Fall Logic Threshold: $V_{THL}=V_{SS}$) while the sense pin voltage keeps higher than the detect voltage ($V_{SEN} > V_{DF}$).
- ⑤ While the delay capacitance pin voltage (V_{CD}) rises to reach the delay capacitance pin threshold voltage (V_{TCD}) with the sense pin voltage equal to the release voltage or higher, the sense pin will be charged by the time constant of the RC series circuit. Assuming the time to the release delay time (t_{DR}), it can be given by the formula (1).

$$t_{DR} = -R_{DELAY} \times Cd \times \ln(1 - V_{TCD}/V_{IN}) \dots(1)$$

The release delay time can also be briefly calculated with the formula (2) because the delay resistance is $2.0M\Omega$ (TYP.) and the delay capacitance pin threshold voltage is $V_{IN}/2$ (TYP.)

$$t_{DR} = R_{DELAY} \times Cd \times 0.69 \dots(2)$$

* : R_{DELAY} is $2.0M\Omega$ (TYP.)

As an example, presuming that the delay capacitance is $0.68\mu F$, t_{DR} is :

$$2.0 \times 10^6 \times 0.68 \times 10^{-6} \times 0.69 = 938(ms)$$

* Note that the release delay time may remarkably be short when the delay capacitance (Cd) is not discharged to the ground (=VSS) level because time described in ③ is short.

- ⑥ When the delay capacitance pin voltage reaches to the delay capacitance pin threshold voltage ($V_{CD}=V_{TCD}$), the inverter (Inv.1) will be inverted. As a result, the output voltage changes into the "High" (=VIN) level. t_{DRO} is defined as time which ranges from $V_{SEN}=V_{DF}+V_{HYS}$ to the V_{OUT} of "High" level without connecting to the Cd.
- ⑦ While the sense voltage is higher than the detect voltage ($V_{SEN} > V_{DF}$), the delay capacitance pin is charged until the delay capacitance pin voltage becomes the input voltage level. Therefore, the output voltage maintains the "High"(=VIN) level.

Function Chart

V_{SEN}	Cd	TRANSITION OF V_{OUT} CONDITION *1		
		①		②
L	L	L	⇒	L
	H			
	L	H		
	H			
H	L	L	⇒	L
	H		⇒	H
	L	H	⇒	
	H			

*1: V_{OUT} transits from condition ① to ② because of the combination of V_{SEN} and V_{CD}, V_{IN} .

V_{IN} should be more than the lowest operation voltage.

Example

ex. 1) V_{OUT} ranges from 'L' to 'H' in case of $V_{SEN} = 'H'$ ($V_{DR} \geq V_{SEN}$), $Cd = 'H'$ ($V_{TCD} \geq Cd$) while V_{OUT} is 'L'.

ex. 2) V_{OUT} maintains 'H' when Cd ranges from 'H' to 'L', $V_{SEN} = 'H'$ and $Cd = 'L'$ when V_{OUT} becomes 'H' in ex.1.

Release Delay Time Chart

DELAY CAPACITANCE [Cd] (μF)	RELEASE DELAY TIME [t_{DR}] (TYP.) (ms)	RELEASE DELAY TIME [t_{DR}] *2 (MIN. ~ MAX.) (ms)
0.010	13.8	11.0 ~ 16.6
0.022	30.4	24.3 ~ 36.4
0.047	64.9	51.9 ~ 77.8
0.100	138	110 ~ 166
0.220	304	243 ~ 364
0.470	649	519 ~ 778
1.000	1380	1100 ~ 1660

* The release delay time values above are calculated by using the formula (2).

*2: The release delay time (t_{DR}) is influenced by the delay capacitance Cd.

TOREX SEMICONDUCTOR LTD.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
