

Low Noise Single-Ended to Differential Amplifier
 SAR ADC Driver

DESCRIPTION

Demonstration Circuit 1538A supports the LT6350, a Low Noise Single Ended to Differential Amplifier / SAR ADC Driver. The LT6350 contains an un-dedicated open-loop “Opamp1”, and a dedicated inverting “Opamp2” in a gain of -1. Opamp1 has Rail to Rail inputs and output. Opamp2 has a Rail to Rail output. See Figure 1.

Design files for this circuit board are available. Call the LTC factory.

PERFORMANCE SUMMARY

 Specifications are typical at $T_A = 25^\circ\text{C}$, $V_S = \pm 5\text{V}$

SYMBOL	PARAMETER	CONDITIONS, COMMENTS	TYP	UNITS
V_S	Supply Voltage Range	Single Supply	2.7V to 12V	V
		Split Supply	+/-1.35V to +/-6V	V
V_{cm}	Input Voltage Range	Op Amp 1	Rail to Rail	V
		Op Amp 2	$V_{S-} + 1.5\text{V}$ to $V_{S+} - 0.1\text{V}$	V
BW	-3dB Bandwidth	Small signal, differential output	33	MHz
V_{out}	Output Voltage Swing	Each output, to either rail, no load	55	mV
I_{CC}	Supply Current	$V_S = \pm 5\text{V}$	4.8	mA

Figure 1. LT6350 Block Diagram . Opamp1 is an undedicated low noise opamp. Opamp2 is a dedicated inverter.

OPERATING PRINCIPLES

Conversion of single ended signals to differential is a basic function. It may be desired for improved transmission characteristics over twisted pair, or for driving SAR ADCs which prefer differential inputs. The LT6350 makes the single-ended to conversion easy by providing

an already connected internal inverter, Opamp2. In the simplest configuration, with Opamp1 in a gain of 1, the conversion to differential causes an effective gain of 2 overall.

QUICK START PROCEDURE

Demonstration circuit 1538 is shipped with the jumpers set for Single Supply, DC coupled operation, with Opamp1 configured in a gain of 1 (OUT1 shorted to -IN1). As the intended application is for single ended inputs, only one input BNC connector is installed (J1) and this is the excitation path for Opamp1's non-inverting input +IN1. To support Opamp1 in inverting or other applications, a footprint for another BNC was included (J3) for user installation.

Figure 2. Proper Connections for Single Supply Operation (DMMs optional). The function generator should be set up to operate around a positive 2V DC offset. For split supply operation, set JP6 to “Split Supply” and connect a negative supply to the V- turret.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
