DESCRIPTION

The UPC2708TB is a Silicon RFIC manufactured using the NESAT III process. This device is suitable as buffer amplifier for DBS, PCS and other communication receivers. The UPC2708TB is pin compatible and has comparable performance as the larger UPC2708T, so it is suitable for use as a replacement to help reduce system size. The IC is housed in a 6 pin super minimold or SOT-363 package.

Stringent quality assurance and test procedures ensure the highest reliability and performance.

PIN DESCRIPTIONS

| Pin No. | Symbol | Applied Voltage (V) | Pin Voltage (V) | Description | Internal Equivalent Circuit |
|-------------|--------|---------------------|-----------------|---|-----------------------------|
| 1 | Input | – | 1.16 | Signal input pin. An internal matching circuit, configured with resistors, enables 50 Ω connection over a wide bandwidth. A multi-feedback circuit is designed to cancel the deviations of hFE and resistance. This pin must be coupled to the signal source with a blocking capacitor. | |
| 4 | Output | – | – | Signal output pin. Connect an inductor between this pin and Vcc to supply current to the internal output transistors. | |
| 6 | Vcc | 4.5 to 5.5 | – | Power supply pin. This pin should be externally equipped with a bypass capacitor to minimize ground impedance. | |
| 2 3 5 | GND | 0 | – | Ground pins. These pins should be connected to system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible. All the ground pins must be connected together with wide ground pattern to minimize impedance difference. | |
