## Product Information

### General notes

The Series 14 illuminated pushbuttons combine the robust actuators of the Series 04 with choice of either snap-action switching elements with gold plated silver contacts for one changeover only.

These pushbuttons have an IP 67 proof front (temporary emersion) and can be immersed to a depth of one metre.

The range includes pushbuttons, keylock switches and selector switches.

Anodized aluminium parts can have visible variations due production-technical reasons.

### Mounting

Mounted from the front through either 22.5 mm dia cut out for raised or 30.5 mm dia for flush.

The pushbuttons are secured to the panel by means of a fixing ring/ nut and prevented from twisting by two screws.

To ensure correct positioning of the pushbuttons we can provide a positioning insert if required.

The Low Level switching elements with universal terminals allow them to PCB mounted. These terminals are also suitable for dip soldering. A plug-in base is available, which when soldered to the board allows the switch to be easily plugged-in.

### Lenses

Lenses of transparent plastic or aluminium are available in various standard colours.

### Marking

For further information about engraving, hot stamping and film inserts see part Marking.

### Illumination

The T5.5 incandescent (filament) lamp (6, 12, 24, 28, 30, 36, 48 V) ensures perfect illumination of the lenses, which are supplied in various colours.

T5.5 Single-Chip LED (6, 12, 24, 28, 48 V) are also available in blue, green, red, white or yellow.

Do not solder the terminals directly, because of the high surface temperature.

Luminosity and wave length scattering caused by the technology used in the LED manufacturing processes may lead to visual differences in our products.

### Position indication

The status of a maintained action switch can be determined by the position of the lens.

### Keylock switch

Single locks (2 positions).

There are 10 different locks with standard numbers 1001 ... 1010. If the lock number is not specified, we will supply standard number 1001.

Additional lock numbers are available on request.

Two keys are supplied with each keylock switch.

Spare keys for standard locks may be ordered by quoting Typ-Nr.

14-987 (please state the lock number).

## Specimen order

### Illuminated pushbutton :

- Illuminated pushbutton actuator, 29 mm dia., snap-action switching element, 1NC + 1 NO, momentary action, soldering terminal 14-131.0252

### Essential accessories :

- Lens plastic red 704.602.2
- Marking plate white translucent 704.609.9
- Front ring aluminium natural 704.600.1
- Single-LED, T5.5, 12 VAC/DC, white 10-2109.1069

*We reserve the right to modify technical data  
All dimensions in mm*

## Illuminated pushbutton, raised mounting

- 1 Front ring
- 2 Lens
- 3 Marking plate
- 4 LED
- 5 Actuator housing with switching element
- 6 Front plate
- 7 Fixing nut

## Illuminated pushbutton, flush mounting

- 1 Front bezel set, flush mounting
- 2 Lens
- 3 Marking plate
- 4 LED
- 5 Actuator housing with switching element
- 6 Front panel
- 7 Pressure ring
- 8 Fixing nut

## Keylock switch, raised mounting

- 1 Front ring
- 2 Actuator housing with switching element
- 3 Front plate
- 4 Fixing nut

## Selector switch, flush mounting

- 1 Front ring
- 2 Actuator housing with switching element
- 3 Front plate
- 4 Anti-twist ring
- 5 Pressure ring
- 6 Fixing nut

## Actuator with snap-action switching element

### Switching system

Self-cleaning, double-break, snap action switching system (with contact gap 2 x 0.5 mm).  
 1 normally closed or 1 normally open contact per element.  
 Snap-action switching elements with soldering terminals at the sides: up to 4 switching element can be on a pushbutton (max. 4 normally closed and 4 normally open contacts).  
 Snap-action switching element with axial plug-in terminals 2.8 mm stackable, only 1 switching element can be on a pushbutton.

## Actuator with low level switching element

## Switching system

This low level switching element was designed for switching low powers in electronic circuits. The mechanism assures reliable switching of loads ranging from a few  $\mu$ A/ $\mu$ V up to 100 mA/42 VAC/DC.

Single-break momentary contact, as normally open or normally closed with 4 independent points of contact. 2 momentary contacts per switching element; combination of normally open and normally closed is possible.

Special features are the long life, extremely short rebound time and stable contact resistance.

### Terminals

The universal terminals permit these units to be mounted on printed circuit boards (PCB). These terminals can also be used as soldering or plug-in terminals.

For these terminals we can also supply a plug-in base which, when soldered on to the board, enables the switch to be plugged in.

Soldering terminal:

Max. wire diameter 2 wires of 1 mm

Max. wire cross-section of stranded cable 2 x 0.75 mm<sup>2</sup>

Plug-in terminal: 2.0 x 0.5 mm.

## Diode element

When indicators and illuminated pushbuttons equipped with diodes, the user is able to perform a lamp check or wire an alarm circuit simply with a considerable saving of space.

## Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e.g. 12 VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

**To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!**

## General notes

### 1. Engraving

In addition to the most commonly used world languages, in DIN 1451-3 close spacing, other typefaces are available as Scandinavian, Slavic, Greek, Russian and Polish.

The lenses are filled with black or white colour. Standard height of letters is 3 mm. If the height is not specified, we will supply 3 mm engraved letters.

### 2. Hot stamping

Standard legends and ISO symbols are hot stamped. For larger series it is worth considering markings by means of hot stamping. We will be pleased to advise you.
