

## 3-line overvoltage protected AC switch array

Datasheet - production data

### Features

- 3-line AC switch array
- Overvoltage protection
- High static immunity and dynamic commutation
- $V_{DRM}, V_{RRM} = 600\text{ V}$
- $T_J = 125\text{ °C max.}$
- $I_{GT} < 5\text{ mA}$

### Application

Drive of low power highly inductive or resistive loads like:

- Relay, valve, solenoid
- Dispenser, door lock
- Pump, fan, micro-motor

**Table 1. Device summary**

Order code	Package	$V_{DRM}, V_{RRM}$	$I_{GT}$
ACS302-6T3	SO-20	600 V	5 mA

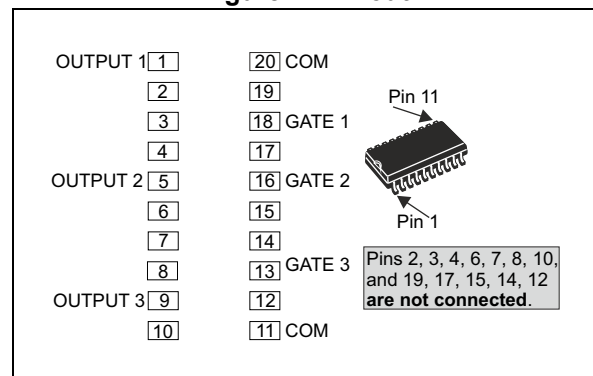

### Description

ACS302 offers 3 AC switches in one single package with 600 V blocking voltage, high commutation and noise immunity - all that is required for inductive load control.

Its high integration allows reduced space consumption of PCB.

ACS302 enables inductive application to be compliant with IEC 61000-4-4 and IEC 61000-4-5.

## 2 AC line switch basic application

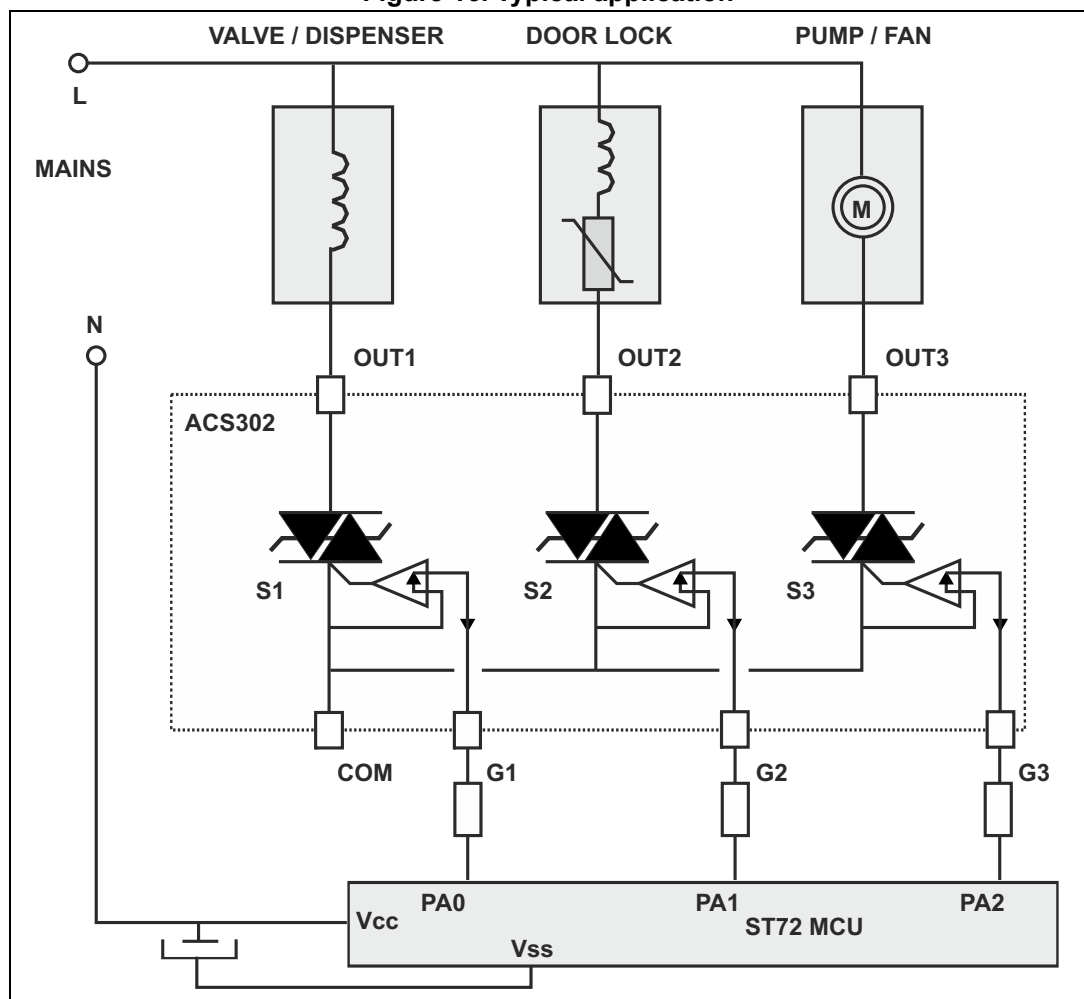

The ACS302 device is well adapted to washing machines, dishwashers, tumble driers, refrigerators, water heaters, and cooking products. It has been designed especially to switch ON and OFF low power loads such as solenoids, valves, relays, micro-motors, pumps, fans, door locks and low power lamps.

- **Pin COM:** Common drive reference, to connect to the power line neutral
- **Pin G:** Switch gate input to connect to the digital controller through a resistor
- **Pin OUT:** Switch output, to connect to the load

Each ACS<sup>®</sup> is triggered with a negative gate current flowing out of the gate pin G. It can be driven directly by the digital controller through a resistor as shown on the typical application diagram. No protection devices are required between the gates and common terminals.

In appliance systems, this ACS drives slow power loads in full cycle ON / OFF mode. Thanks to its thermal and turn off commutation performances, the ACS302 switch is able to drive three loads up to 0.2 A each such as two water valves and a door lock in a dishwasher, without any additional turn-off snubber.

Figure 16. Typical application

## 2.1 High Inductive switch-off operation

In [Figure 17](#), at the end of the last conduction half-cycle, the load current reaches the holding current level  $I_H$ , and the ACS turns off. Because of the inductance  $L$  of the load, the current flows through the avalanche diode  $D$  and decreases linearly to zero. During this time, the voltage across the switch is limited to the clamping voltage  $V_{CL}$ .

The energy stored in the inductance of the load depends on the holding current  $I_H$  ([Figure 18](#)) and the inductance (up to 10 H). The energy stored can reach about 20 mJ and is dissipated in the clamping diode section that is especially designed for that purpose.

**Figure 18. ACS302 switch static characteristic**

## 2.2 AC line transient voltage ruggedness

The ACS302 is able to withstand safely the AC line transient voltages either by clamping the low energy spikes or by breaking over under high energy shocks.

The test circuit shown in [Figure 19](#) is representative of the final ACS application and is also used to stress the ACS according to the IEC 61000-4-5 standard conditions. Thanks to the load, the ACS withstands the voltage spikes up to 2 kV above the peak line voltage. It will break over safely even on resistive load where the turn on current rise is high as shown in [Figure 20](#). Such non repetitive test can be done 10 times on each AC line voltage polarity.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
