

## 1.5A High-Speed 30V MOSFET Drivers

### Features

- High Peak Output Current – 1.5 A
- Wide Input Supply Operating Range:
  - 4.5V to 30V
- High Capacitive Load Drive Capability:
  - 1000 pF in 25 nsec
- Short Delay Times – <78 nsec Typ.
- Low Supply Current:
  - With Logic '1' Input – 2.5 mA
  - With Logic '0' Input – 300  $\mu$ A
- Low Output Impedance – 7  $\Omega$
- Latch-Up Protected: Will Withstand >300 mA Reverse Current
- ESD Protected – 4 kV

### Applications

- Small Motor Drive
- Power MOSFET Driver
- Driving Bipolar Transistors

### General Description

The TC4431/TC4432 are 30V CMOS buffer/drivers suitable for use in high-side driver applications. They will not latch up under any conditions within their power and voltage ratings. They can accept, without damage or logic upset, up to 300 mA of reverse current (of either polarity) being forced back into their outputs. All terminals are fully protected against up to 4 kV of electrostatic discharge.

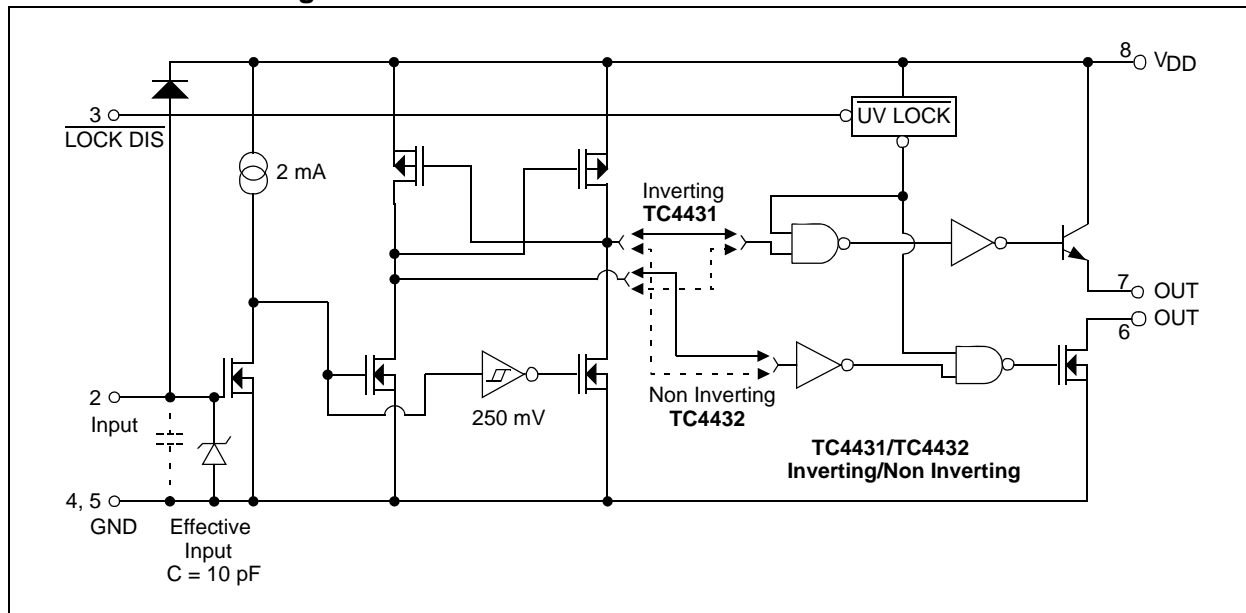

Under-voltage lockout circuitry forces the output to a 'low' state when the input supply voltage drops below 7V. For operation at lower voltages, disable the lockout and start-up circuit by grounding pin 3 (LOCK DIS); for all other situations, pin 3 (LOCK DIS) should be left floating. The under-voltage lockout and start-up circuit gives brown out protection when driving MOSFETS.

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings†

Supply Voltage .....	36V
Input Voltage ( <b>Note 1</b> ) .....	$V_{DD} + 0.3V$ to GND
Package Power Dissipation ( $T_A \leq 70^\circ\text{C}$ )	
PDIP .....	730 mW
CERDIP .....	800 mW
SOIC .....	470 mW
Maximum Junction Temperature, $T_J$ .....	+150°C
Storage Temperature Range .....	-65°C to +150°C

† Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

## 3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

**TABLE 3-1: PIN FUNCTION TABLE**

Pin No.	Symbol	Description
1	$V_{DD}$	Supply Input, 4.5V to 30V
2	IN	TTL/CMOS Compatible Input
3	LOCK DIS	Input Pin, Enable/Disable for UV Lockout
4	GND	Ground
5	GND	Ground
6	OUT	Drive Output, Pull Down
7	OUT	Drive Output, Pull Up
8	$V_{DD}$	Supply Input, 4.5V to 30V

### 3.1 Supply Input ( $V_{DD}$ )

The  $V_{DD}$  input is the bias supply input for the MOSFET driver and is rated for 4.5V to 30V with respect to the ground pins. The  $V_{DD}$  input should be bypassed to ground with a local ceramic capacitor. The value of this capacitor should be chosen based on the capacitive load that is being driven.

### 3.2 Control Input (IN)

The MOSFET driver input is a TTL/CMOS compatible input with 250 mV of hysteresis between the high and low threshold voltages. If an input signal level of greater than 12V is applied to the device, a series current limiting resistor is recommended.

### 3.3 Lockout Disable (LOCK DIS)

The lockout pin enables/disables the undervoltage lockout feature of the device. If undervoltage lockout is desired (output is not enabled until the bias voltage reaches 8.4V (typical) on the rising edge and is disabled when the bias voltage reaches 7.7V (typical) on the falling edge), the lockout pin should be left floating. If operation below 7V is desired, the lockout pin should be tied to ground.

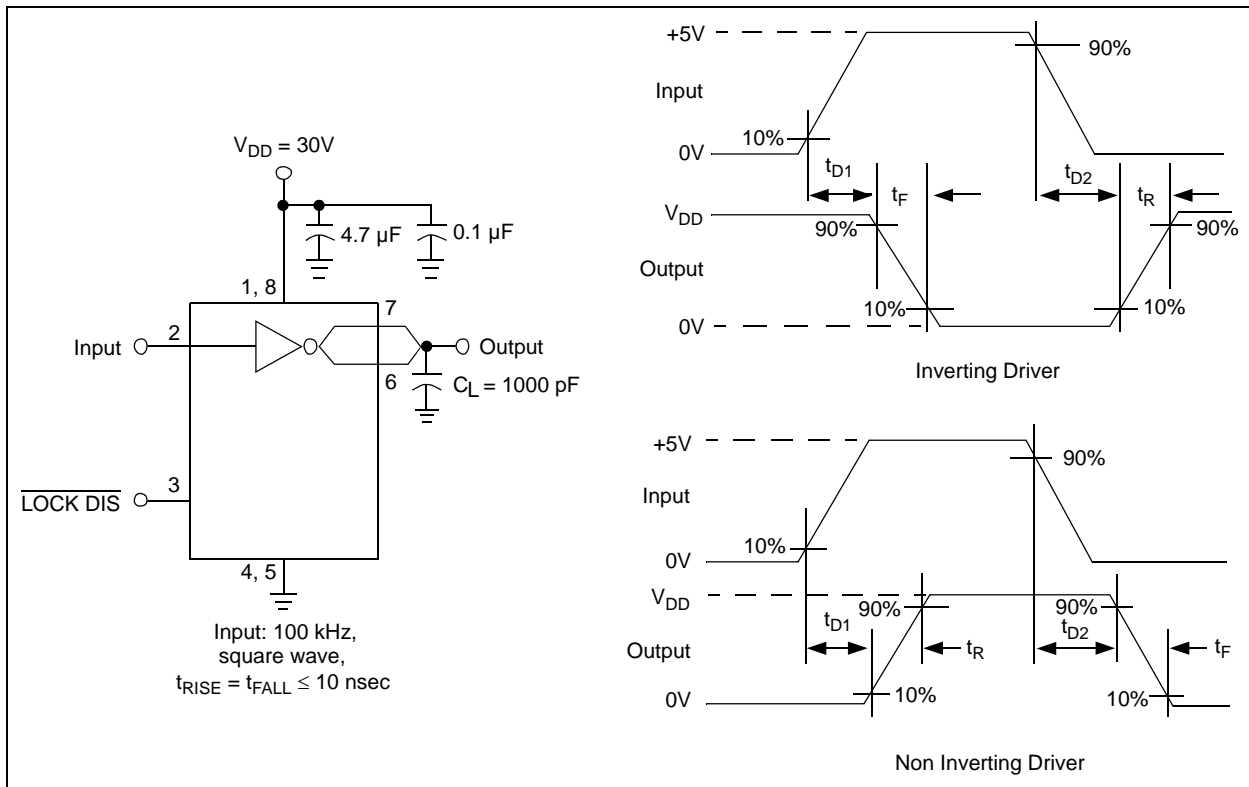

### 3.4 Ground (GND)

The ground pins are the return path for the bias current and for the high peak currents which discharge the load capacitor. Both ground pins should be used to ensure proper operation. The ground pins should be tied into a ground plane or have short traces to the bias supply source return.

### 3.5 Drive Output (OUT)

The TC4431/TC4432 devices have individual source and sink output pins. This feature can be used to adjust the rise and fall time independently by adding separate charge and discharge resistors external to the device. Pin 7 (source output) can source 3 A peak currents into capacitive loads and pin 6 (sink output) can sink 1.5 A peak currents from a capacitive load.

## APPENDIX A: REVISION HISTORY

### Revision D (December 2007)

The following is the list of modifications:

1. **Section 1.0 “Electrical Characteristics”:**  
Added V temperature information to Temperature Characteristics table.
2. Added Revision History.
3. Added V temperature range to Product identification System page.

### Revision C (May 2003)

The following is the list of modifications:

1. Undocumented changes

### Revision B (May 2002)

The following is the list of modifications:

1. Undocumented changes

### Revision A (April 2002)

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
