

Smart Quad Low-Side Switch

Features

- Shorted circuit protection
- Overtemperature protection
- Overvoltage protection
- Open Load Detection
- Direct parallel control of the inputs
- Inputs high or low active programmable
- General fault flag
- Very low standby quiescent current
- Compatible with 3V microcontrollers
- **Electrostatic discharge (ESD) protection**

Application

- μ C compatible power switch for 12 V applications
- Switch for automotive and industrial systems
- Line, relay or lamp driver

General description

Quad channel Low-Side Switch in Smart Power Technology (SPT) with four separate inputs and four open drain DMOS output stages. The TLE 6225 G is protected by embedded protection functions and designed for automotive and industrial applications, to drive lines, lamps and relays.

The TLE 6225 G is a quad channel low-side switch with four power DMOS stages. The power transistors are protected against short to V_{BB} , overload, overtemperature and against over-voltage by zenerclamp.

The diagnostic logic recognises a fault condition which is indicated by a fault flag.

Output Stage Control

Each output is independently controlled by an input pin and a common enable line, which enables/disables all four outputs. The parallel inputs are high or low active depending on the PRG pin. If the parallel input pins are not connected (independent of high or low activity) it is guaranteed that the outputs 1 to 4 are switched OFF. ENA - and PRG - pin itself are internally pulled down when they are not connected.

ENA - Enable pin.

ENA = High:	Active mode. Channels are enabled
ENA = Low (GND):	Sleep mode. Channels are switched off. Less than 1 μ A current consumption.

PRG - Program pin. PRG = High: Parallel inputs Channel 1 to 4 are high active
PRG = Low (GND): Parallel inputs Channel 1 to 4 are low active.

Power Transistors

Each of the four output stages has its own zenerclamp. This causes a voltage limitation at the power transistors when inductive loads are switched off. The outputs are provided with a current limitation set to a minimum of 500 mA.

Each output is protected by embedded protection functions. In the event of an overload or short to supply, the current is internally limited. If this operation leads to an overtemperature condition, a second protection level (about 170 °C) will turn the effected output into a PWM-mode (selective thermal shutdown with restart) to prevent critical chip temperatures. The temperature hysteresis is typically 10K.

Diagnostic

The $\overline{\text{FAULT}}$ pin is an open drain output. The logic status depends on the programming pin PRG.

FAULT - pin.

<u>FAULT</u> = High	no fault @ PRG = High
<u>FAULT</u> = Low	no fault @ PRG = Low

Diagnostic Table

Operating Condition	Enable Input	Program Input	Control Input	Power Output	Diagnostic Output
	ENA	PRG	IN	OUT	FAULT
Standby	L	X	X	OFF	H
Normal function	H	L	L	ON	L
	H	L	H	OFF	L
	H	H	L	OFF	H
	H	H	H	ON	H
Overtemperature	H	L	L	OFF *	H
	H	H	H	OFF *	L
Open load or short to ground	H	L	L	ON	L
	H	L	H	OFF	H
	H	H	L	OFF	L
	H	H	H	ON	H

X = not relevant

Fault Distinction

Open load/short to ground is recognised in OFF-state. Overtemperature as a result of an overload or short to battery can only arise in ON-state. If there is only one fault at a time, it is possible to distinguish which channel is affected with which fault.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
