

IDC Sockets for Discrete Wires XG5

Trouble-free discrete-wire termination with IDC Sockets that mate with XG4 and XG8 Plugs.

- Two-row, IDC construction and insulation barrel offers high reliability and large-current (3 A) discrete wiring capability.
- Adaptable to a variety of covers for space-saving and discrete wire termination.
- By using the simple, unique top lock-lever system, these Connectors can be locked to either the XG8W Unshrouded Plugs (with right-angle terminals) or XG4C Box-type Plugs.
- Conforms to UL standards (file no. E 103202) and CSA standards (file no. LR 62678).

Note: The contact numbers are marked on the contact insulation barrels.

Assembled Configuration

Insulation Displacement (IDC) versus Crimp Termination

IDC termination provides the following advantages over crimp style termination, when using discrete wires;

- Overall cost is lower, because less manhours are required. Wire stripping is eliminated and inspection is easier.
- IDC termination provides consistent quality, improving yield.
- XG5 terminals are installed in the socket housing at the factory, simplifying the Bill of Material and parts control.
- Optional replacement IDC terminals facilitates re-configuration of wiring.

Applicable Plugs

- XG4A, XG4C, XG4E and XG8 are recommended.
- XG4C and XG8 Plugs do not have locks. To prevent accidental removal, use a Lock Lever (XG4Z-0002, XG5Z-0002). (Lock Levers cannot be used with XG8W Straight Terminal Connectors.)
- When mounting the XG8 Original Plug (with right-angle terminals) to a circuit board, be sure that the cover is positioned off the board as shown below.

XG5 Accessories

Top Lock Levers

XG5Z-0002 - "Lock Lever"

Use to lock unshrouded right-angle Plugs (XG8B and XG8W) to XG5 or XG4 mating sockets.

XG4Z-0002 - "Lock Lever II"

Use to lock XG4C Box-type Plugs.

Mounting the Lock Lever

For Sockets with polarity guides, mount the Lock Lever to the tab to lock the Socket to the Unshrouded Plug as shown in the diagram on the right.

Note: 1. These Contacts can be used as replacements if a wrong connection is made.

2. The applicable wire for size No. 1 is AWG24 (UL-1061). The applicable wire for size No. 2 is AWG26 to AWG28 (UL-1007).

Contact Removal Tool

XY2E-0001

Used to remove contacts, which need to be replaced or reconfigured, from the housing.

Replacing Contacts

Use only this tool to remove incorrect IDC contacts.

1. Remove the cover.
2. Insert the tool into the housing lance holes and push the lance into the housing.
3. Pull out the contact while holding the lance down.
4. Insert a new contact.

XG5 IDC Assembly Tools

See the "XG□ - Assembly Tooling and Accessories" datasheet for details regarding manual and automated IDC Termination tools (part numbers XY2B-7006 and XY2B-2104-N)

Precautions

Correct Use

IDC Connectors

- For best results, use only the XG5 IDC Tool. (See the “XG□ - Assembly Tooling and Accessories” datasheet.)
- Contact your OMRON representative for details on the XG5 IDC Tool.
- Check the Contact size (No. 1 or No 2) and wire size before connecting.
- OMRON has a IDC Tool Reference Manual. Contact your OMRON representative to request a copy.

Mounting the Cover

- The cover is used to protect the connection position and prevent shorting out.

Mounting the Semi-cover

- See the above diagram.
1. Insert part A of the Semi-cover into part B of the Socket.
 2. Push the claws on both sides of the Semi-cover onto the Socket.
 3. Make sure the claws are firmly inserted in the slots.
 4. To protect the wires, use cable ties to bind wires that may be subject to tension even when a Semi-cover is used.

Mounting the Hood Cover

Vertical Hood Cover

- See the above diagram.
1. Insert the claws of part A of the Hood Cover into the slots.
 2. Insert claws B on the Hood cover into part C on the other part of the Hood Cover.
 3. Wrap the wires with a cable tie.

Horizontal Hood Cover

- Follow the mounting procedure for the vertical cover.
- The left and right parts of the cover are different. Assemble carefully.

XG5M-N Double-row Socket Contact Numbers

- The Contact numbers on the Double-row Assembled Socket match the numbers on the XG4M Flat Cable MIL Socket. (See the above diagrams.)

XG4M Terminal Numbers

- When making IDC connections on the Double-row Assembled Connector, use the polarity guide to distinguish the front and back. (Note: The 10-contact Connector does not have a guide.)
