

CORCOM High Current AC Power Line Filters

Broad line of single and three phase products

Our commitment. Your advantage.

Key Features

30 - 400A current rating

Delta or WYE configuration for three phase products

Safety agency approvals - see chart

Voltage Ratings up to 250 V (single phase)

Voltage Ratings 277/480 V and 250/440 V (three phase)

DESCRIPTION

Tyco Electronics Corcom brand products has added to our offering of high current (over 30 amps) power line filters. These filters are designed to meet demanding performance requirements of high current applications by providing high insertion loss over a wide frequency range. Low leakage current models are available.

APPLICATIONS

- Factory Automation
- HVAC Systems
- Heavy Equipment
- Packaging Equipment
- Motors
- Food Processing Equipment
- Elevators
- General Purpose and Clean Up Applications
- Motor Controllers
- Frequency Converters

PRODUCT OFFERING & PART NUMBERS

				Insertion Loss						
				Line to Ground (dB)			Line to Line (dB)			
Part Number	Wiring	Current Rating	Rated Voltage (max.) Phase-Neutral/Phase-Phase	MHz			MHz			Safety Agency Approvals
				0.1	1	30	0.1	1	30	
SINGLE PHASE FILTERS

CORCOM High Current AC Power Line Filters

Broad line of single and three phase products

SERIES SUMMARY:

Single Phase High Current AC Power Line Filters

EMC Series:

Designed to address the need for more differential mode attenuation in the lower frequency range while still maintaining high common mode performance. This type of performance is typically needed for motor drives and switch mode power supplies with increased operating frequencies.

FC Series:

The FC filters provide filtering for frequency inverters and variable speed motor drives. Suited for field wiring applications, these filters are ideal for EMC troubleshooting and field refurbishing.

K Series:

General purpose common-mode and differential mode filters particularly suited in applications where pulsed, continuous and/or intermittent RFI interference is present.

SK Series:

The SK series filters use significantly higher element values than general purpose filters, making them better suited for equipment with line-to-ground and line-to-line conducted emissions, including switch mode power supplies.

S Series:

Filters designed for use when equipment impedance at RF frequencies is high. These filters will better protect equipment from malfunctions due to conducted interference coming into equipment from the line, especially line-to-line noise and transients.

Three Phase High Current AC Power Line Filters

A Series:

Mid- and high-level differential and common mode filtering for balanced or unbalanced three phase loads. Effective filtering for each of the three lines plus the neutral and ground lines.

AYA Series:

Cost effective filters that help protect electronics equipment in industrial applications such as uninterruptible power supplies and industrial control systems.

ADT Series:

Designed with very high insertion loss for Delta applications, these three phase filters work well in industrial applications to bring high current motor drives into compliance with the European EMC directives. It is available with common or differential mode coils for the correct protection to fit the application.

AYC Series:

The AYC series filters are designed for 3-phase, four-wire, WYE wiring applications. Filtering up to 180 amps for use in 3-phase, noisy industrial applications such as frequency converters.

BCF Series:

Compact, lightweight "bookform" filters ideal for applications requiring very high attenuation in the frequency range between 100 kHz and 30 MHz.

CFN Series:

Universal, 3-phase power line filter for high current applications. The CFN series is ideal for electrical equipment in factory automation systems, HVAC systems, heavy industrial machinery, packaging machinery, motors and other three-phase power applications.

FCD Series:

Designed for very noisy Delta applications, they attenuate conducted interference at low and high frequency ranges and better protect programmable logic controllers from RF noise on the AC power line. The FCD filters better prevent noise from returning to the line, enabling equipment to meet strict European RFI regulations.

Note: Customized solutions designed to meet specific application requirements are also available.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
