

## FEATURES

- Maximum Offset Voltage:  $70\mu V$  ( $25^\circ C$ )
- Maximum Offset Drift:  $0.8\mu V/^{\circ}C$
- Maximum Input Bias:  $1\text{pA}$  ( $25^\circ C$ )  $40\text{pA}$  ( $T_A \leq 85^\circ C$ )
- Open Loop Voltage Gain:  $120\text{dB}$  Typ
- Gain Bandwidth Product:  $3.6\text{MHz}$
- CMRR:  $100\text{dB}$  Min
- PSRR:  $98\text{dB}$  Min
- $0.1\text{Hz}$  to  $10\text{Hz}$  Noise:  $1.3\mu V_{P-P}$
- Supply Current:  $330\mu A$
- Rail-to-Rail Inputs and Outputs
- Unity Gain Stable
- $2.7\text{V}$  to  $5.5\text{V}$  Operation Voltage
- Dual LTC6081 in 8-Lead MSOP and 10-Lead DFN10 Packages; Quad LTC6082 in 16-Lead SSOP and DFN Packages

## APPLICATIONS

- Photodiode Amplifier
- Strain Gauge
- High Impedance Sensor Amplifier
- Microvolt Accuracy Threshold Detection
- Instrumentation Amplifiers
- Thermocouple Amplifiers

## TYPICAL APPLICATION

Shock Sensor Amplifier (Accelerometer)

## DESCRIPTION

The LTC®6081/LTC6082 are dual/quad low offset, low drift, low noise CMOS operational amplifiers with rail-to-rail input/output swing.

The  $70\mu V$  maximum offset,  $1\text{pA}$  input bias current,  $120\text{dB}$  open loop gain and  $1.3\mu V_{P-P}$   $0.1\text{Hz}$  to  $10\text{Hz}$  noise make it perfect for precision signal conditioning. The LTC6081/LTC6082 features  $100\text{dB}$  CMRR and  $98\text{dB}$  PSRR.

Each amplifier consumes only  $330\mu A$  of current on a  $3\text{V}$  supply. The 10-lead DFN has an independent shutdown function that reduces each amplifier's supply current to  $1\mu A$ .

LTC6081/LTC6082 is specified for power supply voltages of  $3\text{V}$  and  $5\text{V}$  from  $-40^\circ C$  to  $125^\circ C$ . The dual LTC6081 is available in 8-lead MSOP and 10-lead DFN10 packages. The quad LTC6082 is available in 16-lead SSOP and DFN packages.

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted.

**Note 3:** The LTC6081C/LTC6082C and LTC6081I/LTC6082I are guaranteed functional over the operating temperature range of  $-40^\circ\text{C}$  to  $85^\circ\text{C}$ . The LTC6081H/LTC6082H are guaranteed functional over the operating temperature range of  $-40^\circ\text{C}$  to  $125^\circ\text{C}$ .

**Note 4:** The LTC6081C/LTC6082C are guaranteed to meet specified performance from  $0^\circ\text{C}$  to  $70^\circ\text{C}$ . The LTC6081C/LTC6082C are designed,

characterized and expected to meet specified performance from  $-40^\circ\text{C}$  to  $85^\circ\text{C}$  but are not tested or QA sampled at these temperatures. The LTC6081I/LTC6082I are guaranteed to meet specified performance from  $-40^\circ\text{C}$  to  $85^\circ\text{C}$ . The LTC6081H/LTC6082H are guaranteed to meet specified performance from  $-40^\circ\text{C}$  to  $125^\circ\text{C}$ .

**Note 5:** Input offset drift is computed from the limits of the  $V_{OS}$  test divided by the temperature range. This is a conservative estimate of worst case drift. Consult the Typical Performance Characteristics section for more information on input offset drift.

**Note 6:**  $I_B$  guaranteed by the  $V_S = 5\text{V}$  test.

**Note 7:** Current noise is calculated from  $I_n = \sqrt{2qI_B}$ , where  $q = 1.6 \cdot 10^{-19}$  coulomb.

**Note 8:**  $V_{OS}$  drift is guaranteed by the  $V_S = 3\text{V}$  test.

## APPLICATIONS INFORMATION

### Preserving Input Precision

Preserving input accuracy of the LTC6081/LTC6082 requires that the application circuit and PC board layout do not introduce errors comparable or greater than the 5 $\mu$ V typical offset of the amplifiers. Temperature differentials across the input connections can generate thermocouple voltages of 10's of microvolts so the connections to the input leads should be short, close together and away from heat dissipating components. Air current across the board can also generate temperature differentials.

The extremely low input bias currents (0.1pA typical) allow high accuracy to be maintained with high impedance sources and feedback resistors. Leakage currents on the PC board can be higher than the input bias current. For example, 10G $\Omega$  of leakage between a 5V supply lead and an input lead will generate 500pA! Surround the input leads with a guard ring driven to the same potential as the input common mode voltage to avoid excessive leakage in high impedance applications.

### Capacitive Load

LTC6081/LTC6082 can drive capacitive load up to 200pF in unity gain. The capacitive load driving capability increases as the amplifier is used in higher gain configurations. A small series resistance between the output and the load further increases the amount of capacitance the amplifier can drive.

### SHDN Pins

Pins 5 and 6 are used for power shutdown on the LTC6081 in the DD package. If they are floating, internal current sources pull Pins 5 and 6 to V<sup>+</sup> and the amplifiers operate normally. In shutdown, the amplifier output is high impedance, and each amplifier draws less than 2 $\mu$ A current.

### Rail-to-Rail Input

The input stage of LTC6081/LTC6082 combines both PMOS and NMOS differential pairs, extending its input common mode voltage range to both positive and negative supply voltages. At high input common mode range, the NMOS pair is on. At low common mode range, the PMOS pair is on. The transition happens when the common voltage is between 1.3V and 0.9V below the positive supply. LTC6081 has better low frequency noise performance with PMOS input on due to its lower flicker noise (see Voltage Noise vs Frequency and 0.1Hz to 10Hz Input Voltage Noise in Typical Performance Characteristics).

### Thermal Hysteresis

Figure 1 shows the input offset voltage hysteresis of the LTC6081IMS8 for 3 thermal cycles from -45°C to 90°C. The typical offset shift is  $\pm 4\mu$ V. The data was taken with the ICs in stress free sockets. Mounting to PC boards may cause additional hysteresis due to mechanical stress. The LTC6081 will meet offset voltage specifications in the electrical characteristics table even after 15 $\mu$ V of additional error from thermal hysteresis.

Figure 1. V<sub>OS</sub> Thermal Hysteresis of LTC6081MS8

## APPLICATIONS INFORMATION

### PC Board Layout

Mechanical stress on a PC board and soldering-induced stress can cause the  $V_{OS}$  and  $V_{OS}$  drift to shift. The DD and DHC packages are more sensitive to stress. A simple way to reduce the stress-related shifts is to mount the IC near the short edge of the PC board, or in a corner. The board edge acts as a stress boundary, or a region where the flexure of the board is minimum. The package should always be mounted so that the leads absorb the stress

and not the package. The package is generally aligned with the leads perpendicular to the long side of the PC board (see Figure 2).

The most effective technique to relieve the PC board stress is to cut slots in the board around the op amp. These slots can be cut on three sides of the IC and the leads can exit on the fourth side. Figure 2 shows the layout of a LTC6081DD with slots at three sides.

Figure 2. Vertical Orientation of LTC6081DD with Slots

**10-Lead Plastic DFN (3mm × 3mm)**  
(Reference LTC DWG # 05-08-1699 Rev B)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS

## NOTE:

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE MO-229 VARIATION OF (WEED-2).  
CHECK THE LTC WEBSITE DATA SHEET FOR CURRENT STATUS OF VARIATION ASSIGNMENT
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADeD AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE

## PACKAGE DESCRIPTION

**DHC Package**  
**16-Lead Plastic DFN (5mm × 3mm)**  
(Reference LTC DWG # 05-08-1706)

**RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS**

**NOTE:**

1. DRAWING PROPOSED TO BE MADE VARIATION OF VERSION (WJED-1) IN JEDEC PACKAGE OUTLINE MO-229
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE

## PACKAGE DESCRIPTION

**GN Package**  
**16-Lead Plastic SSOP (Narrow .150 Inch)**  
(Reference LTC DWG # 05-08-1641)

## PACKAGE DESCRIPTION

### MS8 Package 8-Lead Plastic MSOP

(Reference LTC DWG # 05-08-1660 Rev F)

NOTE:

1. DIMENSIONS IN MILLIMETER/(INCH)
2. DRAWING NOT TO SCALE
3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.  
MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.  
INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX

**REVISION HISTORY** (Revision history begins at Rev B)

REV	DATE	DESCRIPTION	PAGE NUMBER
B	3/10	Change LT to LTC on all part numbers in Order Information Section.	3
C	07/10	Update to Simplified Schematic	12

# LTC6081/LTC6082

## TYPICAL APPLICATION

Single Supply Strain Gauge Amplifier

60812 TA02

## RELATED PARTS

PART NUMBER	DESCRIPTION	COMMENTS
LTC1678/LT1679	Dual/Quad Precision Op Amps	Low Noise, 2.7V to 36V Operation
LTC2050	Zero-Drift Op Amp	2.7V Operation, SOT-23 Package
LTC2051/LTC2052	Dual/Quad Zero-Drift Op Amps	MS8/GN16 Packages
LTC2054/LTC2055	Single/Dual Zero-Drift Op Amp	Micropower, SOT-23 and DFN Packages
LTC6078/LTC6079	Dual/Quad Low Noise Precision CMOS Op Amps	Micropower 0.7µV/°C $V_{OS}$ Drift
LTC6241/LTC6242	Dual/Quad Low Noise CMOS Op Amps	18MHz Bandwidth, 10V/µs Slew Rate
LTC6244	Dual 50MHz CMOS Op Amp	Low Noise, Rail-to-Rail Out, MS8 and DFN Packages

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
