MC74LCX06

Low-Voltage CMOS Hex Inverter with Open Drain Outputs

With 5 V – Tolerant Inputs

The MC74LCX06 is a high performance hex inverter operating from a 2.3 V to 3.6 V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers. These LCX devices have open drain outputs which provide the ability to set output levels, or do active−HIGH AND or active−LOW OR functions. A V_I specification of 5.5 V allows MC74LCX06 inputs to be safely driven from 5.0 V devices.

Features

- Designed for 2.3 V to 3.6 V V_{CC} Operation
- 5.0 V Tolerant Inputs/Outputs
- LVTTL Compatible
- LVCMOS Compatible
- 24 mA Output Sink Capability
- Near Zero Static Supply Current (10 μA) Substantially Reduces System Power Requirements

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.
1. I_O absolute maximum rating must be observed.
