NOTE: The connector products in this brochure were formerly known as Bendix® products. These products are now manufactured and sold under the Amphenol® brand name. The name "Amphenol" will replace the name "Bendix" on products and literature in the future.

Due to space limitations, metric equivalents of dimensional data in this catalog have not been included. All dimensions given may be converted to the metric system by the standard formula: dimension (inches) x 25.40 = dimension (millimeters).

Amphenol has the following and other patents which relate to the products described in this catalog:  
 U.S. Patent 3,764,943, U.S. Patent 3,840,841, U.S. Patent 4,029,386, U.S. Patent 4,264,116, U.S. Patent 4,275,945, U.S. Patent 4,431,251, U.S. Patent 4,440,463, U.S. Patent 4,583,810, U.S. Patent 4,707,048, U.S. Patent 4,707,049, U.S. Patent 4,741,710, U.S. Patent 4,746,310, U.S. Patent 4,747,789, U.S. Patent 4,768,977, U.S. Patent 4,789,360, U.S. Patent 4,932,900, U.S. Patent 5,163,853, U.S. Patent 5,164,873, U.S. Patent 5,167,537, U.S. Patent 5,195,014, U.S. Patent 5,198,958, U.S. Patent 5,211,582  
 Amphenol has additional patents pending, as well as patents and applications in other countries.

Amphenol Aerospace operates quality systems that are certified to ISO9001: 2000 by third party registrars.

# Amphenol® EMI/EMP Filter Protection Connectors

## for protection of sensitive circuits

Amphenol® EMI/EMP Protection Connectors offer the versatility of standard connectors with EMI/EMP protection for sensitive circuits. Internal housing of the EMI/EMP devices eliminates costly and bulky exterior discrete protection devices.

Virtually all major MIL-Spec cylindricals can be incorporated with filter devices:

- MIL-DTL-38999
- MIL-DTL-5015
- MIL-C-26482
- MIL-C-27599
- MIL-C-83723
- MIL-C-26500

Amphenol offers filter connectors that include:

- EMP protection using diodes
- EMP protection utilizing metal oxide varistors (MOV's)
- Filtered plug connectors
- Filtered hermetic connectors
- Filter connectors with ESD protection
- Combinations of filtering devices within one connector package

This catalog focuses on the cylindrical connector offerings from Amphenol with EMI/EMP filter transient protection. There are also many rectangular filter connectors that are offered by Amphenol which include:

- MIL-DTL-24308 D-Sub
- MIL-DTL-83513 Micro D
- ARINC 404/600
- DOD-83527 Rack and Panel
- MIL-DTL-83733 Rack and Panel

Rectangular filter interconnects are manufactured and supplied by Amphenol Canada. See further information at the end of the catalog.

### Advantages of Filter Connectors:

- Reduction in overall weight and space with the elimination of external filter circuits
- Reduction of solder junctions
- Increase in reliability due to fewer connections
- Fragile filter elements protected from handling and environmental damage
- Pre-testing from factory and ready for installation

**FTV**  
Subminiature Tri-Start, MIL-DTL-38999 Series III, Metal or Composite shells with Filter Protection.

**FJT**  
Subminiature JT, MIL-DTL-38999 Series II with Filter Protection.

**Filter Contacts Combined with High Speed Contacts**  
Filter Connectors can incorporate high frequency coax, twinax, triax, quadax and differential twinax contacts.

**FLJT**  
Subminiature LJJT, MIL-DTL-38999 Series I with Filter Protection.

**FCTV with Stand-off Flange**  
Filtered Tri-Start connectors with composite shells for attachment to printed circuit boards.

**MOV Connectors**  
MOV's act as a variable resistor to efficiently dissipate energy. MOV can be packaged singularly or in combinations with other EMI Filtering.

**Filter AN Connectors**  
MIL-DTL-5015 Type Connectors with Filter Protection.

**FPT**  
Miniature MIL-C-26482 Series 1 with Filter Protection.

**Header Assemblies**  
Allow for easy separation and easy termination of connectors when attaching to flex or printed circuit boards. Allow for electrical testing that would adversely affect sensitive diodes, MOV's or filter capacitors.

# EMI Capabilities for maximum design flexibility

The Amphenol® EMI filter connector utilizes two manufacturing technologies to provide the user with the most cost effective performance across the frequency range. (For EMP performance data, see pages 58-61).

The tubular design offers over 40 years of proven field reliability. All filter contacts within the connector share a common ground plane, which is connected to the connector shell. The pin to pin isolation is 85 dB minimum at 100 MHz. The planar design joins pins to a multi-layered ceramic forming an array sub-assembly, with a peripheral ground which is connected to the connector shell via a ground spring. Pin to pin capacitance is less than 50 pf with a pin to pin isolation of 85 dB minimum at 100 MHz.

Filter contacts for both designs contain either a pi passive ele-

ment network comprised of a ferrite inductor and ceramic capacitor, or a single capacitor.

For planar designs other filter networks are available, ie. T Type, L-C Type, C-L Type and C Type. An encapsulant of oven-cured epoxy in the rear provides:

- Mechanical and thermal insulation of the ceramic elements – mechanical loading can be accomplished without capacitor damage. Pins can be bent 90° and straightened with no damage to the filter.
- Hermeticity ( $4.6 \times 10^{-3}$ cc/sec) – prevents water from entering through the rear of the connector in high humidity environments. Amphenol recommends using metal protection caps during cleaning operations.

\* More in-depth information on attenuation is available in: L-1146, General Design Guideline for EMI Filters and/or TVS (Transient Voltage Suppression) Connectors. Also for further information ask for: L-1145, How to Specify Filter Connectors.

# EMI Capabilities, cont.

Amphenol provides a wide range of filtering solutions. You can select your options for your particular interference threats - VHF, UHF, HF or other filter ranges, then couple with a connector package of your choice. Or give Amphenol your custom shell design requirements for assistance in designing your unique filter solution.

EMI Filter connectors are intended for use in temperatures from  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . Attenuation will change with feed-through current and temperature.\*

To assure reliability, connectors may be subjected to an attenuation performance test verifying proper assembly and grounding of the filters. Attenuation data on filter performance is stated in reference to a 50 ohm impedance system in order to allow filter performance to be more easily translated into real world impedances.

Those interested in determining the expected filter performance in an impedance system other than 50 ohms may refer to page 7 of this catalog or may contact Amphenol Aerospace for further assistance.

It is suggested that the user analyze his system requirements for EMI protection in the following areas:

- Working voltage (DC or AC and Frequency)
- Peak voltage
- Desired attenuation at a given frequency level
- Any special capacitance limitations

## Definition of Filter Contacts:

MF	Medium Frequency 50 dB performance between 300 - 2999 KHz
HF	High Frequency 50 dB performance between 3 - 29 MHz
VHF	Very High Frequency 50 dB performance between 30 - 2999 MHz
UHF	Ultra High Frequency 50 dB performance between 300 - 2999 MHz

Filter contacts can be provided in most frequencies in contact sizes 22 or larger. Consult Amphenol Aerospace for availability.

Tubular connector designs will meet 3 amps RF current from  $-55^{\circ}\text{C}$  through  $+125^{\circ}\text{C}$ . Planar connector designs will meet 5 amps.

## Planars, MOV's, Tubular and Diode Contacts

**Planar Array Assembly**

**Capacitor and MOV Planars**

**Tubular Filters and Diode Contacts**

## Contact Options

- Coaxial, concentric twinax, triax and quadax contacts can be included in arrangements of filtered contacts for signal or power circuits (See Amphenol catalog 12-130, High Frequency Contacts for Multi-pin Connectors).
- Filter contacts with differing cutoff frequencies can be mixed in any given insert arrangement. (ratio 20:1 typical)
- Ground, insulated or filter contacts can be combined within the same connector to meet unique or changing frequency protection requirements.
- Thermocouple contacts
- Diodes for EMP

## Methods of Wire Termination

- Solder cup - wire termination
- PCB termination (Pre-tinning is available)
- Solderless wrap
- Amphenol® UTS (Universal Termination System) allows crimp termination. It uses crimp insertable socket contacts on conductor wires. Sockets mate with filter pins within the connector body. (Socket type M39029/57). (For further contact information, see catalog 12-090, MIL-DTL-38999 Series I & II).
- Weld terminal for thermocouple contacts

# Filter Connector Options

## Other Filter Connector Options include:

- Filter adapters eliminate replacement of either existing mated pair. The adapter provides the circuit protection at the MF, VHF and UHF levels, and is an effective and economical method of introducing EMI/EMP protection to an installed system. Adapters are to be placed between mating faces. (See pages 56, 57).
- Receptacle shell modifications that allow mounting directly to a PC board or flex header. Stand-off shells are available in different configurations. These offer improved reliability by eliminating external spacers and washers. (See pages 12, 13, 19, 20 and 33).
- The hermetic filter connector, while only approximately 1/2 inch longer than standard series connectors, provides all the benefits of a hermetic connector, plus EMI protection for sensitive circuits. The filter assembly is protected by a fused glass insert within a unique steel housing. This design provides the capability to tolerate high level static pressure while maintaining a low level leakage rate. Consult Amphenol Aerospace for more information.
- Composite shell filter connectors meet the MIL-DTL-38999, Series III dimensional length, and offer a light-weight, corrosion resistant, durable connector with the same high performance features as its metal counterpart. The composite filter connector utilizes planar technology to accommodate VHF-1 or better electrical performance characteristics. (See pages 9-13).
- Filter connectors with ESD (Electrostatic Discharge) protection are available. These MIL-DTL-38999 Series III connectors have an added feature of a Faraday Cage to shunt electrostatic discharge events to the conductive enclosure on which the connector is mounted. (See page 65).
- Filtered Plugs are designed for applications where EMI protection is essential, but access to the receptacle is denied. Designed with the same components as a standard filter receptacle, the filtered plug offers the option of being mounted on the cable harness. It is a cost effective method of achieving EMI protection when length restrictions prohibit inclusion of an adapter to the system. Consult Amphenol Aerospace for availability.
- Diode Connectors offers versatility with transient protection for sensitive circuits, such as TTL lines. Diodes can stand alone or be combined with other filters. (Pages 60, 61).
- Receptacles with EMP protection are available for MIL-DTL-38999 Series IV. (Pages 44-46).
- Amphenol's Energy Shunting Assembly is a simple, compact unit which provides lightning and electromagnetic pulse protection of systems in which many signal lines enter sensitive electronic equipment. (Page 62).

**Cylindrical Filter Protection Connectors are offered in a wide range of styles, with custom designs for special applications.**

**Filter Adapters can be attached to connectors to provide EMI/EMP protection.**

**Hermetic filter connector**

**Composite shell stand-off Filter 38999 connector**

**Filtered plug**

**Diode Connectors**

**ESA - Energy Shunting Assembly**

# Filter Selection Data

Amphenol® EMI Connectors are produced with several types of filters. They are all low band pass filters with the following configurations:

## Pi -

Typical of the VHF, UHF and MF filter

## Cascaded Pi -

Typical of the HF filter. It consists of two VHF Pi filters on a common pin and is available in tubular designs only.

## Capacitor \*-

Consists of a feed-through capacitor without any ferrite. It can be 50pf to 1µf and carry the MF, HF and VHF designation depending on its typical 50dB performance.

## L-C \*-

Typical of HF, VHF and UHF filter. Low source / high load impedance.

## C-L \*-

Typical of HF, VHF and UHF filter. High load impedance / low source.

## T \*-

Typical of HF, VHF and UHF filter. Low source / low load impedance.

\* Consult factory for attenuation performance values.

Parameters		Medium Frequency Filter†	High Frequency Filter†	Very High Frequency Filter		Ultra High Frequency Filter	
		MF1 (Pi)	HF1 (Cascaded Pi)	VHF1 (Pi)	VHF2† (Pi)	UHF1† (Pi)	UHF2† (Pi)

# Impedance Matching Formula (your system to a 50 ohm system)

The following formula and example are offered in order to determine the expected filter performance in an impedance system other than 50 ohms.

With the attenuation expressed in 50 ohms and the transfer impedance curve shown in Figure 1 below, a designer can relate the expressed attenuation to the input and output impedance of his circuit.

Example:

- (1) Noise is 40dB above specification level at 100 MHz
- (2) Input and output impedance are 10 and 100 ohms respectively
- (3) Amphenol® VHF 7000 pf filter has a 65 dB minimum attenuation at 100 MHz and +25°C

Formula (Taken from Figure 1):

$1.4 \times 10^2 \Omega$  = transfer impedance  
for 65 dB in a 50 ohm system

$$\text{Atten (dB)} = 20 \log_{10} \left[ 1 + \frac{Z_S Z_L}{Z_{12}(Z_S + Z_L)} \right]$$

$Z_S$  = source impedance

$Z_L$  = load impedance

$Z_{12}$  = transfer impedance

Atten = filter performance in a system other than 50 ohms

$$\text{Atten (dB)} = 20 \log_{10} \left[ 1 + \frac{10(100)}{1.4 \times 10^2 (10 + 100)} \right]$$

Attenuation = 56.3dB

In this case, the 7000 pf VHF filter will give 56.3 dB which is 16.3dB below the desired reduction in noise (40dB) as stated in the above problem.

**Attenuation vs Transfer Impedance in 50 Ohm System**

Figure 1

# Quality Assurance Testing

## ACCEPTANCE TESTING

All filter connectors undergo extensive acceptance testing to assure product quality. An outline of standard acceptance testing performed is as follows:

### Mechanical Inspection

- Dimensional inspection of shells, keys, keyways and mounting surfaces by either in-process inspection of components or inspection of final assemblies.
- Visual inspection of contacts, inserts and seals, gaskets and surface finish of shells and hardware.

### Electrical Tests

- Insulation resistance of filter contacts is checked 100% at the working voltage and to the test limit listed for each filter in the filter selection data table.
- Dielectric withstanding voltage is tested on 100% of filter contacts at the voltage listed in the filter selection data table.
- Capacitance is tested 100% at 1KHz.

### Special Tests/Processes

In addition to the standard acceptance testing and processes, the following additional production testing and processing can be provided upon request:

- Attenuation testing (through 100 MHz)
- Leakage inspection
- Thermal cycling/shock
- Burn-in
- De-gassing

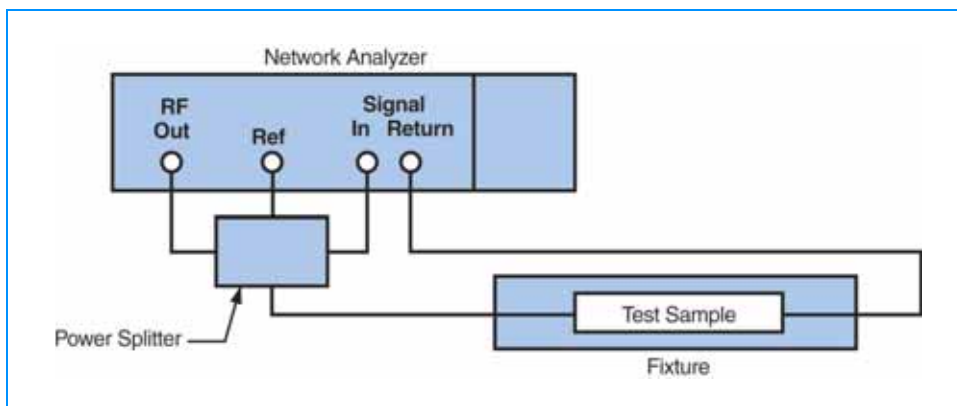

Consult Amphenol Aerospace for further information.

### Qualifications

Amphenol® filter connectors have been qualified and are on periodic requalification to specification BSF-1 (available from your Amphenol representative). This is patterned after MIL-DTL-38999, modified to include mechanical and environmental testing and electrical parameters important to filter connector performance.

These acceptance tests, along with exhaustive in-process inspection and testing, give Amphenol® filter connectors their reputation for reliability.

## ATTENUATION TEST CIRCUIT

There are multiple test stations located on the Amphenol production floor that support all in-process, final electric and qualification testing as necessary.

# Amphenol® FCTV Series Composite Tri-Start™ Subminiature Cylindrical Filters

The Amphenol® FCTV Series is the Composite Tri-Start with filtering for EMI/EMP protection. It offers the same high performance as its metal counterpart, the FTV, but with a lightweight, corrosion resistance shell.

- Intermateable with MIL-DTL-38999 Series III connectors (See Catalog 12-092)
- Quick Mating - completely mates in a 360° turn of the coupling nut
- Lockwiring Eliminated - incorporates anti-decoupling device
- Contact Protection - 100% "scoop-proof"
- Improved Moisture Resistance - prevents electrolytic erosion of contacts
- Lightweight Composite shell - 17% – 70% weight savings over metal
- Corrosion Resistant - available in standard MIL-DTL-38999 olive drab cadmium (175°C) and electroless nickel plating (200°C), both withstanding 2000 hours of salt spray exposure. The base material is able to withstand an indefinite exposure to salt spray.
- Durability - 1500 couplings minimum (in reference to connector couplings, not contacts)

**Composite FCTV Connector for PCB board mounting. Amphenol is currently the only supplier of one-piece composite PCB stand-off shells.**

# Amphenol® FTV Series Tri-Start™ Subminiature Cylindrical Filters

The Amphenol® FTV Series demonstrates unsurpassed technical leadership. With the added feature of the filter, this high performance general duty threaded connector is designed to withstand the pressures of severe environment applications.

- Intermateable with MIL-DTL-38999 Series III connectors (see Catalog 12-092)
- Quick Mating – completely mates in a 360° turn of the coupling nut
- Lockwiring Eliminated – incorporates anti-decoupling device
- Contact Protection – 100% “scoop-proof”
- Improved Moisture Resistance – prevents electrolytic erosion of contacts
- Corrosion Resistant – 500 hour salt spray olive drab cadmium over nickel plating, class RW, or stainless steel shells

**FTV Master Key/Keyway Rotation**

# Amphenol® FJT Series Subminiature Cylindrical Filters

The Amphenol® FJT Series space and weight saving design, coupled with a filter, gives high reliability.

- Intermateable with MIL-DTL-38999/27599 Series II connectors (see Catalog 12-090)
- Quick Positive Coupling – 3 point bayonet locking
- Error-proof alternate positioning of shell keyways
- Higher reliability and greater durability with permanently encapsulated contacts
- Environmental Resistant
- Aluminum shells with several finish options

## FJT Master Key/Keyway Rotation

Shell Size	AB Angle of Rotation (Degrees)				
	Normal	A	B	C	D
8	100	82	–	–	118
10	100	86	72	128	114
12	100	80	68	132	120
14	100	79	66	134	121
16	100	82	70	130	118
18	100	82	70	130	118
20	100	82	70	130	118
22	100	85	74	126	115
24	100	85	74	126	115

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The AB angle for a given connector is the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

AB angles shown are viewed from the front face of the connector. A receptacle is shown at right. The angles for the plug are exactly the same, except the direction of rotation is opposite of that shown for the receptacle.

# Amphenol® FLJT Series Subminiature Cylindrical Filters

The Amphenol® FLJT Series offers all the design features of the FJT plus a 100% “scoop-proof” contact protection design.

- Intermountable with MIL-DTL-38999/27599 Series I connectors (see Catalog 12-090)
- Contact Protection - shell design prevents contact damage
- Quick Positive Coupling – 3 point bayonet locking
- Higher reliability and greater durability with permanently encapsulated contacts
- Environmental Resistant
- Aluminum shells with several finish options
- Error-proof alternate positioning of shell keyways
- Corrosion Resistant - 500 hour salt spray olive drab cadmium over nickel plating, class T (aluminum), or stainless steel shells

**FLJT Master Key/Keyway Rotation**

Shell Size	AB Angle of Rotation (Degrees)

# Amphenol® FSJT Series Subminiature Cylindrical Filters

The Amphenol® FSJT Series combines the unique design features of the scoop-proof FLJT Series with the standard mounting dimensions of JT types. (See SJT Catalog 12-091)

- 100% scoop-proof design
- Standard mounting dimensions
- Compliance with European Specifications PAN6433-2, LN29729, BS9522 F0012, VG96912
- Uses proven filter technology with available components from other series
- EMP protection versions available

## FSJT Master Key/Keyway Rotation

Shell Size	AB Angle of Rotation (Degrees)				
	Normal	A	B	C	D
8	95	—	—	—	—
10	95	81	67	123	109
12	95	75	63	127	115
14	95	74	61	129	116
16	95	77	65	125	113
18	95	77	65	125	113
20	95	77	65	125	113
22	95	80	69	121	110
24	95	80	69	121	110

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The AB angle for a given connector is the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

AB angles shown are viewed from the front face of the connector. A receptacle is shown at right. The angles for the plug are exactly the same, except the direction of rotation is opposite of that shown for the receptacle.

# Amphenol® FBL Series IV Subminiature Cylindrical Filters

Components designed to meet the severe mechanical and environmental requirements of MIL-DTL-38999 Series III are now available to Series IV users. Modifications of the connector are available with EMP protection, incorporating MOV's, diodes or a combination of both.

- Intermateable with MIL-DTL-38999 Series IV plugs
- Maintains all the features of standard MIL-DTL-38999 Series IV receptacles
- Scoop-proof pins provide contact protection
- Uses insert patterns from MIL-DTL-38999 Series III

# Amphenol® FPT Series Miniature Cylindrical Filters

The Amphenol® FPT Series combines the unique design features of the miniature PT Series with an EMI filter.

- Intermateable with MIL-C-26482 Series connectors (see Catalog 12-070), and MIL-C-83723 Series I connectors (see Catalog MS-102)
- Quick positive coupling with visual confirmation of mating
- Higher reliability and greater durability with permanently encapsulated contacts
- Aluminum shells with several finish options

# Amphenol FAN Connectors

## filtered “AN”

The “AN” Filter Connector is designed in configurations intermateable and intermountable with MIL-DTL-5015\* connectors and provides electromagnetic interference protection for critical circuits.

- Same dimensions as the non-filtered standard MIL-spec connectors with the exception of back shell length. (See Catalog 12-020).
- Uses non-removable solder cup terminated contacts.
- Shells are impact extruded or machined bar stock aluminum and are available in several conductive platings.
- Applications include power transmission, medical communications, and ground support equipment.

The following insert arrangements within the 5015 family have the same alternate insert rotations for W, X, Y and Z, which are:

Degrees			
W	X	Y	Z
80	110	250	280

16-7	20-22	22-29	24-17	28-16	32-13

# Amphenol® Filter Adapters

effective circuit protection for existing applications

Filter adapters present an effective and economical method of introducing EMI/EMP protection to an installed system. The adapter series of filter connectors from Amphenol are available to intermate with all the popular MIL-Specs.

Features of the Amphenol® adapter include:

- Planar technology from the industry's leader in cylindrical filter products
- MOV or diode capability for transient protection
- Wide range of tooled patterns
- Space qualified components

Installation of the adapter is quick and efficient, requiring no tools, fixtures or extended downtime. Simply unmate the existing cable harness from the receptacle; attach the coupling nut to the receptacle on the unit; then mate the cable harness to the receptacle side of the adapter.

Several design alternatives are available that will help ensure that the adapter remains permanently attached to either the cable harness or the unit receptacle.

# Amphenol® Transient Protection

## MOV – Metal Oxide Varistor Connectors

- Filter connector size package
- Protection for 14, 31, 38 DC voltage circuits
- Radiation hardened
- No additional circuits required
- Low impedance
- Increased reliability
- Nanosecond response time
- Elimination of costly external suppression assemblies

The Amphenol® MOV Connector offers the versatility of a standard connector, with transient protection for sensitive circuits.

Transients in electrical circuits caused by a sudden release of stored energy can originate within or outside of the circuit and may be repeatable or random.

Regardless of frequency or origin, transient caused failures generated by load switching, lightning, electrostatic discharge (ESD) and electromagnetic pulse (EMP) can destroy unprotected IC components.

Compatible with present filter connector assembly procedures, MOVs can be combined with existing filters. Internal housing of the MOV sleeve offers weight and space savings over other protection methods available today, and eliminates costly and bulky exterior suppression mechanisms in appropriate situations. MOVs are presently available in contact sizes 22, 20 and 16.

Transient protection can be provided in receptacle, plug or adapter configuration. These connectors are intermateable and intermountable with the following MIL-Specs:

- MIL-DTL-5015
- MIL-C-26482
- MIL-C-26500
- MIL-C-27599
- MIL-DTL-38999
- MIL-C-83723

NOTE: Continuous voltage ratings are based on 1000 hour reliability assurance tests at 125 °C rated ambient temperature per MIL-STD-202 Method 108. Contact Amphenol Sidney for options not listed in chart.

The following charts show the typical MOV response to an input pulse open circuit of 1000V and 10A peak square wave with a 5 nanosecond rise time in a 50 Ohm system.

The following chart shows response time and output voltage of a typical MOV with 1000V, 5 nanosecond, 2.5A input pulse mounted in an LJT 13-35P connector. Test was performed without load.

# Amphenol® Transient Protection Diode Connectors

- Clamping voltage as low as 11.9 volts
- Low capacitance – suitable for high frequency applications
- Unipolar or bipolar – using existing proven diode technology
- Protection for 5.8 to 60 VDC circuits
- No additional circuits required
- Low impedance – high frequency response
- Increased reliability
- Nanosecond response time
- Elimination of costly external suppression assemblies
- Screening to applicable requirements of MIL-S-19500TX/ TXV available
- Keeps transients outside of the box
- Minimizes fast transient voltage overshoot

The Amphenol® Diode Connector offers the versatility of a standard connector, with transient protection for sensitive circuits, such as TTL Lines.

Transients in electrical circuits caused by a sudden release of stored energy can originate within or outside of the circuit and may be repeatable or random.

Regardless of frequency or origin, transient caused failures generated by load switching, lightning, electrostatic discharge (ESD) and electromagnetic pulse (EMP) can destroy unprotected IC components.

Compatible with present filter connector assembly procedures, diodes can stand alone or can be combined in series with filters. Internal housing of the diode offers weight and space savings over other protection methods available today, and eliminates costly and bulky exterior suppression mechanisms in appropriate situations. Diodes are presently available in contact sizes 22 and 20.

Transient protection can be provided in receptacle, plug or adapter configurations. These connectors are intermateable and intermountable with the following MIL-Specs:

- MIL-DTL-5015
- MIL-DTL-27599
- MIL-C-26482
- MIL-DTL-38999
- MIL-C-26500
- MIL-C-83723

# Amphenol® Transient Protection

## ESA – Energy Shunting Assembly

The Amphenol® Energy Shunting Assembly (ESA) is a simple, compact unit which provides lightning and electromagnetic pulse (EMP) protection of systems in which many signal lines enter sensitive electronic equipment. The efficient packaging of the ESA circumvents the concept of one protective device per line. It provides a surge arrester which has the advantage of space saving and simplified assembly when compared to current protective devices which range from diodes to large spark gaps.

The current ESA design consists of two 53-pin contact, Mil-Standard, hermetic connectors assembled back to back, and encompassing a ground plate. A sealed chamber is formed within this thru-bulkhead unit, housing 53 in-line spark gaps. Introducing a controlled atmosphere enhances fast rise breakdown.

The ESA can be integrated with an EMI filter connector which can improve its performance. These two assemblies provide a method to help protect against lightning, EMP, EMI and TEM-PEST effects.

### Performance Characteristics

1. DC breakdown voltage	230 Volts	
2. Maximum rated surge discharge current (8 x 20 microsecond pulse)	5,000 Amperes per pin	
3. Insulation resistance	10 <sup>10</sup> ohms minimum	
4. Capacitance between each electrode and the ground plane	Less than 2 pf	
5. Rate-of-rise breakdown voltage	Maximum Breakdown Voltage (Volts)	Rate of Rise (Volts/microsecond)
	600	10
	800	1,000
	1,500	10,000
	2,000	100,000
6. Surge breakdown unbalance (at 100 Volts/microseconds)	180 Volts	
7. Surge life (500 Ampere – 10 x 1,000 microsecond)	400 Surges	
8. Hold-over voltage	100 Volts	
9. Arcing voltage	40 Volts	
10. Glow to arc transition point	1 Ampere	
11. Temperature range	-40°F to 150°F (233°K to 339°K)

## Universal “Header Assembly” for flex print or PC board connectors

### Mounts to all MIL-DTL-38999 and MIL-C-26482 Connectors

The use of connectors with printed circuit termination is rapidly gaining popularity due to the use of high volume, vapor phase or wave solder manufacturing processes. Termination of this style of connector to flex print or a printed circuit board represents a major cost in the manufacturing process for users. When adding flex or printed circuit board assemblies to an expensive filter or filter/transient protection connector, the total cost of a failed solder joint, a bent pin, or an unanticipated electrical failure becomes prohibitive. The universal header assembly from Amphenol will provide for easy separation of the connector from the board on these occasions.

### Header Assemblies Provide Cost Savings

Incorporation of the header assembly provides the user with time and cost saving potentials. These header assemblies can be vapor phase or wave soldered to flex or printed circuit boards prior to the receipt of the EMI/EMP connector. Headers can be installed to standard connectors, allowing for electrical testing that would adversely affect the sensitive diodes, MOV's or capacitors in the EMI/EMP connectors. Expensive connector assemblies can be easily removed from and reattached to the header assembly as the manufacturing process dictates.

### Mounting Applications

Shell modifications are recommended, but are not necessary. The header assembly can be attached to connectors with standard flange placement or directly to the circuit board. The ideal application would involve either a single flange moved all the way to the rear of the connector or a double flange. Cinch nuts can be installed in either flange to allow easier mounting to the panel or the header assembly. The forward flange would mount the connector to the panel; the rear flange would be used to mount the header assembly. Various types of captivated or loose attaching screws can be utilized for unique applications.

Amphenol universal headers are slotted to allow mounting to all series of MIL-DTL-38999 or MIL-C-26482 connectors without special alterations. They are of similar dimension as the flange of the mounting connector and would be approximately .185 inches (4.70 mm) thick.

### Incorporates a Shorter Pin/Socket Contact

The heart of the header assembly is a short pin/socket contact. The tall of the contact would accommodate standard through-hole diameter and thickness of the flex or printed circuit board materials. The socket is imbedded in the molded material, making electrical engagement with the printed circuit tail of the connector.

Headers provide easy separation of the connector from the PC board.

### Cylindrical Configuration

- 3 PCB stickout dimensions are available.
- Size 22D contacts use .175 thick headers
- Size 16 to 20 contacts use .195 thick headers
- Consult Amphenol, Sidney NY for additional configurations.
- Headers for cylindrical connectors accommodate up to 128 pins. Consult Amphenol catalogs for mating connector contact layouts (12-092 and 12-090 for MIL-DTL-38999 and 12-070 for MIL-C-26482).

### Mounting to Rectangular ARINC Connectors

- Headers for ARINC connector arrangements accommodate up to 150 pins.
- Consult Amphenol, Sidney NY for ARINC configurations and detailed dimensions.

### Materials

- Body is molded from Torlon or PPS (Polyphenylene Sulfide)
- Electrical engagement areas of the header contact are plated with .00003 inches minimum of gold over .00005 inches minimum of nickel.

\*\* Size 22 contacts available in all 3 stickout lengths. Size 16 and 20 contacts available only in .185 and .270 lengths.

\*\*\* Insert arrangement 14-97 and 15-97 are not available at this time. Consult Amphenol, Sidney, NY for information.

# Filter Accessories

## Amphenol Electrostatic Discharge (ESD) Protected Connectors

Amphenol has developed cylindrical and rectangular connectors which protect sensitive components from Electrostatic Discharge (ESD) without diodes, varistors, gas tubes, or “experimental” semiconductive materials.

These connectors utilize the Faraday Cage principal to shunt electrostatic discharge events to the conductive enclosure on which the connector is mounted, thus never allowing the high voltage, high current discharge event to reside on any contacts.

The ESD protected connectors have the same physical envelope as their standard counterparts, and do not require special mounting or terminating techniques. All of the contacts remain fully functional, and electrical characteristics such as capacitance are not effected.

### Product Features:

- Connector envelope identical to unprotected design for most applications
- Exceeds Protection Requirements of IEC 801-2 and MIL-STD-1686:
- Ensures that All Components within a Conductive Enclosure will be Subjected to a Maximum of 10V during Electrostatic Discharges between – 26 KV and +26 KV
- Voltage Observed on Contacts during ESD Events – <10V (at 1 megohm)
- Current Observed on Contacts during ESD Events – <100 milliamperes (at 2 ohms)
- Response Time – Instantaneous (Voltage and Current are Maximum Values)
- Maximum ESD Voltage – Tested to  $\pm 26KV$
- No Capacitive Loading
- Eliminates the Need for Discrete Components (such as diodes) and Maximizes Printed Circuit Board Real Estate for Equipment Housed in Conductive Enclosures which require ESD Protection as Free-standing Units
- Operating Voltage of Connectors not Effected for Most Designs
- Pulse Life – Infinite

### What is Electrostatic Discharge (ESD)?

**Electrostatic Discharge (ESD)** is the rapid transfer of a static electric charge from one body to another. A static electric charge consists of either a surplus or depletion of electrons on a body, which gives that body a potential or voltage relative to ground (or another body). The discharge is extremely fast (less than 1 nanosecond risetime) and the current flow may exceed 100 amps!

Static electricity is normally the result of two materials transferring charges when rubbed or separated, such as shoes scuffing across a dry carpet, or sheets of untreated plastic being separated. This phenomena is commonly referred to as the **triboelectric effect**.

The voltage developed due to the **triboelectric effect** depends on the materials involved, the quantity and type of contact, and relative humidity. In a dry environment a person can accumulate a charge of up to 25 KV! In a moist environment a person’s potential is reduced due to the effect of moisture on the insulating properties of materials.

For further information see:

Amphenol Product Data Sheet #171-1 Amphenol Electrostatic Discharge (ESD) Protected Connectors.

Amphenol Publication L-2075, “ESD Attenuation Test Procedure for Connectors with Faraday Cage Protective Structures”

\* For further information on Amphenol LRM connectors with ESD protection consult Amphenol Aerospace, Sidney, NY

ESD Testing on MIL-DTL-38999, Series III Filter Cylindrical Connector (Actual Photo)

### What is a Faraday Cage?

A **Faraday cage** is a conductive enclosure. It may be solid in form such as a sheet-metal enclosure, or it may be full of apertures, such as a wire cloth box. When a charge is placed on a faraday cage the electrons which make up the charge, having like polarity, try to position themselves as far as possible from each other. This places the electrons on the outer surface of the enclosure, leaving the inner surface uncharged. The charge on the outer surface does not induce a charge on any neutral object inside of the faraday cage, and therefore does not try to transfer itself onto the internal object. Neutral objects (such as IC’s) inside of a faraday cage are thereby protected from ESD activity external to the faraday cage.

The voltage and current observed on neutral objects within a faraday cage during ESD events are due to the secondary effects of ESD. These include Electromagnetic Interference (EMI), magnetic and electrical field coupling. The faraday cage of the Amphenol ESD Protected Connectors has been designed to minimize these effects.

### The Amphenol® ESD Protected Connectors

The Amphenol® ESD Protected Connectors have a faraday cage at the mating interface. The faraday cage has been specifically designed to intercept electrostatic discharges from the contacts in the unmated state, while maintaining each contact’s isolation when the connector is mated. When the ESD Protected Connectors have been mounted to a conductive enclosure, a faraday cage is created which will protect components located within the enclosure from electrostatic discharges. This eliminates the need for discrete components such as diodes and gas discharge tubes, and saves printed circuit board real estate. Amphenol ESD Protected Connectors have also been applied to Line Replaceable Modules (LRM).\*

# How to Order Filter Connectors

The following format is suggested when ordering Amphenol® EMI filter connectors:

- Fill out the EMI Filter Connector check list on the next page. This check list page can be copied, filled out and sent to an Amphenol technical support person. Fax it to 607-563-5157 and a filter connector specialist will help you. It is also available on-line at [www.amphenol-aerospace.com/products\\_filter.html](http://www.amphenol-aerospace.com/products_filter.html).
- Choose the contact and attenuation characteristics required. (see pages 5 and 6).
- Choose the contact size and insert arrangement. Refer to corresponding Mil-Spec or go to the applicable Amphenol detailed connector catalog as follows:
  - 12-092, MIL-DTL-38999, Series III Tri-Start Connectors
  - 12-090, MIL-DTL-38999, Series I & II, LJT & JT Connectors
  - 12-070, MIL-C-26482, Series 1 Connectors
  - 12-020, MIL-C-5015 Connectors
 These detailed catalogs are all available on-line at [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com).
- Choose the shell style that fits your application. Refer to each of the style sections in this catalog:

Filter Connector Type	Filter Connector Brief Description	Pages
FCTV	MIL-DTL-38999 Series III with Composite shell	9-13
FTV	MIL-DTL-38999 Series III with Metal shell	14-20
FJT	MIL-DTL-38999, Series II	21-27
FLJT	MIL-DTL-38999 Series I	28-37
FSJT	Proprietary 38999 type	38-43
FBL	MIL-DTL-38999 Series IV	44-46
FPT	MIL-C-26482	47-53
FAN	MIL-DTL-5015	54-55

- To arrive at part number, see pages 67, 68, How to Order.

# How to Order

Ordering procedure for example part number 21-209216-26P is shown below. If further assistance is needed to determine your filter connector requirements and order number(s), see the EMI Filter Check List on the next page and/or consult Amphenol Aerospace, Sidney, NY.

## -2XX

Any combination of filters, non-filters, grounds, and non-standard contact terminations will require -2XX suffix. Please consult Amphenol Aerospace for assistance in setting up these part numbers.

- Standard voltage for diode is  $\pm 8$  volts. Any deviation requires a -2XX suffix.
- Standard voltage for a MOV is 47 volts. Any deviation requires a -2XX suffix.
- Standard diode/filter combination is  $\pm 8$  volt/VHF-1 filter. Any deviation requires a -2XX suffix.
- Standard MOV/filter combination is 47 volt/VHF-1 filter. Any deviation requires a -2XX suffix.

T = T Style  
L = LRC

**Density**

H - High density  
Blank if medium density

**Deviation**

000 = Standard

**Shell Plating**

1 - Electroless nickel    4 - Gold  
2 - Tin    5 - Zinc nickel  
3 - Cadmium (clear)

**Mounting Style**

1 - .120" (3.04mm) mounting hole  
2 - 4-40 Threaded cinch nut  
3 - Right angle mounting bracket  
4 - Right angle mounting bracket with 4-40 threaded cinch nut

**Capacitance (PF) Pi, C, CRL, LRC, T**

A2 = 200 to 400    04 = 4000 to 8000  
A4 = 400 to 800    08 = 8000 to 16000  
02 = 1800 to 3600    16 = 16000 to 32000

### 458 Filtered (83733) & F39 Filtered (R39)

458 Series filter rack and panel connectors offer the cost advantages of planar ceramic technology in conjunction with stress isolation techniques. F39 filter connectors provide the same advantages in custom rectangular connectors using 38999 Series II contacts.

Example part number 458-A131P-TCA1-XXX is shown:

458 - A 131 P - T CA1 - XXX

**Amphenol Series**  
458 for Filtered 83733  
F39 for Filtered R39

**Shell Size**

**Insert**

**Pin/Socket**

**000**

XXX for specials

**Filter Style**

CA2, C01, C02,  
C10, PA4, P02,  
P04, P08, P1

**Termination Styles**

S = Solder Cup    B = PCB  
T = Crimp

### ARINC Filter (404 & 600)

Rack and panel ARINC 404 connectors meet or exceed MIL-C-81659 and ARINC Spec. 404. ARINC 600 connectors is the successor to the 404 for many new avionic designs.

Example part number F85-6RB2A150B121C13W2P02X is shown:

F85 - 6 R B 2 A150B121C13W2 P 02 X

**Amphenol Series**  
485 is Production part designation  
F85 is Catalog/Website description only

**ARINC Series**  
4 = ARINC 404 or MIL-C-81659  
6 = ARINC 600

**Style**  
A = Adapter    P = Plug    R = Receptacle

**Termination**  
B = PC Tails    S = Solder Cup

**Shell Size**  
A, B (ARINC 404) 1, 2, 3 or 4

**Deviation**

**Capacitance**  
Same as 308 Series

**Filter Circuit**

P = Pi  
C = Capacitance

**Layout Designator**

ARINC 600 Define inserts for each cavity  
Define inserts and gender (P or S)  
ARINC 404 for each cavity (e.g. 106P)

# Amphenol® EMI/Transient Protection specials

## The Hermetic Filter Connector

While only approximately 1/2 inch longer than standard series connectors, the hermetic filter connector provides all the benefits of a hermetic connector, as well as EMI protection for sensitive circuits. The filter assembly is protected by a fused glass insert within a unique steel housing. This design accounts for the connector's capability in tolerating high level static pressure, while maintaining a low level leakage rate. Applications include pressurized test equipment, environmental and toxic gas chambers, and moisture sealing on industrial equipment and missiles.

Filtered Plug

Hermetic Filter Connector

## Filtered Plug

This connector is designed for applications where EMI protection is essential, but access to the receptacle is denied. The filtered plug presents an alternative for the electrical engineer. The filter plug is designed with the same components as a standard filter receptacle, but offers the option of being mounted on the cable harness. This device is a cost effective method of achieving EMI protection when length restrictions prohibit inclusion of an adapter to the system.

## Filter Connectors can also incorporate high frequency coax, twinax, triax, quadax and differential twinax contacts.

Amphenol MIL-DTL-38999 Series III connectors are the most commonly used connectors for incorporation of shielded contacts along with traditional crimp contacts. High performance shielded coaxial, twinax and triax contacts are available to fit various RG and special cables. They eliminate discontinuities or impedance variations due to movement of parts under axial load. Size 8 quadax and differential twinax contacts provide high speed data transfers.

Filter Connectors with Coax Shielded Contacts

## Filter Connectors with Flex Termination

Flex circuits are available for MIL-DTL-38999, MIL-DTL-5015 and MIL-C-26482 filter connectors. They are offered in flat or sculptured styles and provide flexibility in assembling to printed circuit boards.

Through Amphenol's Advanced Circuit Technology division, these strong and rigid, yet highly flexible circuits eliminate the need to purchase and attach individual pins or connectors. Thus they promote system automation, reduce space requirements and lower installation costs.

Sculptured® Flexible Circuits have built-in terminations which eliminate the failure associated with crimped or soldered-on contacts, and geometrically fit the tight space requirements within a unit.

Flex Circuitry for Attachment to Printed Circuit Boards

MIL-DTL-38999 with Quadax Contacts

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
