

AIMB-552

Socket 479 Intel® Pentium® M/Celeron® M
MicroATX, VGA/LVDS, 10 COM, & Dual LAN

CE FCC

Features

- Intel® 910GMLE/915GME chipset supporting 400/533 MHz FSB processor
- Dual channel DDR2 400/533 SDRAM up to 2 GB
- Supports dual display for VGA, LVDS, and DVI (optional)
- Supports 10 serial ports, 8 USB, 2 SATA ports, 2 LAN and CF
- Supports embedded software APIs and utilities

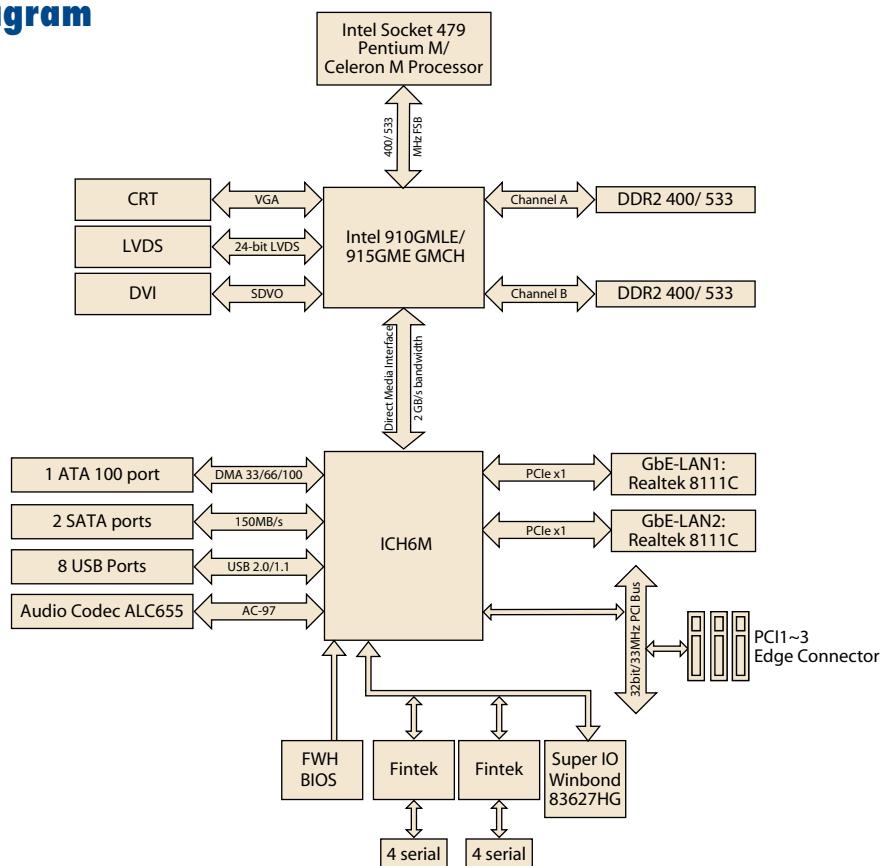

Specifications

Processor System	CPU (90 nm/130 nm)	Intel Pentium M	Intel Celeron M	Intel ULV Celeron M	
	Max. Speed	760 2.0 GHz	370 1.5 GHz	1 GHz on board	
	Front Side Bus	533 MHz	400 MHz	400 MHz	
	L2 Cache	2 MB	1 MB	0 KB	
	Chipset	Intel 915GME/910GMLE + ICH6M			
	BIOS	Award 4 Mbit, FWH			
Expansion Slot	PCI	32-bit/33 MHz, 3 slots			
Memory	Technology	Dual channel DDR2 400/533 SDRAM			
	Max. Capacity	2 GB			
	Socket	2 x 240-pin DIMM			
Graphics	Embedded	Intel GMA 900 sharing 128 MB system memory			
	LVDS	Single channel 24-bit/dual channel 48-bit LVDS			
	DVI	Chrontel 7307C SDVO Transmitter (optional)			
	Dual display	CRT + LVDS, CRT + DVI, LVDS + DVI			
Ethernet	Interface	10/100/1000 Mbps			
	Controller	GbE LAN1: Realtek RTL8111C, GbE LAN2: Realtek RTL8111C			
	Connector	RJ-45 x 2			
SATA	Max. Data Transfer Rate	150 MB/s			
	Channel	2			
EIDE	Mode	ATA 100/66/33			
	Channels	1 (max. two devices)			
I/O Interface	SSD	CompactFlash	CompactFlash Type I/II		
	VGA	1			
	LVDS	1			
	DVI	1 (optional)			
	LAN	2			
	USB	8			
	Audio	2 (Line-out, Mic-in)			
	Serial	10 (2 of RS-232/422/485)			
	Parallel	1 (SPP/EPP/ECP)			
	FDD	1			
Watchdog Timer	PS/2	2 (1 x keyboard and 1 x mouse)			
	Output	System reset			
Power Requirements	Interval	Programmable 1 ~ 255 sec/min			
	Power On	Pentium 2.0 GHz PGA (FSB 533), 1GB DDR2 667	Celeron M 1.0 GHz BGA (FSB 400), 1 GB DDR2 533		
	+5 V	+3.3 V	+12 V	+5 V	+3.3 V
	2.62 A	0.55 A	1.84 A	3.17 A	0.403 A
					0.527 A
Environment	Operating		Non-Operating		
	Temperature	0 ~ 60°C (32 ~ 140°F)	-20 ~ 70°C (-4~150°F)		
Physical Characteristics	Dimensions (W x D)	244 mm x 244 mm (9.6" x 9.6")			

* Intel 910GMLE only supports FSB 400 processor and DDR2 400 SDRAM

Board Diagram

Ordering Information

Part Number	On board processor	Chipset	DDR2	Display	GbE
AIMB-552G2-S0A1E	Celeron 1 GHz	910GMLE	400	VGA/LVDS	2
AIMB-552G2-00A1E	-	915GME	400/533	VGA/LVDS/ DVI	2

*AIMB-552 cannot be installed in ACP-2000MB chassis

Riser Card

Part Number	Description
AIMB-RP10P-01A1E	1U riser card for 1 PCI expansion

Bracket View

AIMB-552G2-00A1E
AIMB-552G2-S0A1E

Packing List

Part Number	Description	Quantity
1700340640	FDD cable	1
1701400452	IDE HDD cable	1
170003194	Serial ATA HDD data cable	2
1703150102	Serial ATA HDD power cable	2
1701100300	COM port cable kit	5
9689000068	Jumper pack	1
1960012532T100	I/O bracket	1
-	Startup manual	1
-	Utility CD	1
1750000348	CPU cooler for AIMB-552G2-00A1E	1
1960017368T000	Passive heatsink for AIMB-552G2-S0A1E	1

Optional Accessories

Part Number	Description
1700008461	USB cable with four ports, 30.5cm
170002204	USB cable with dual ports, 27cm
170003195	USB cable with dual ports, 17.5cm
170000821	DVI cables

Embedded OS

OS	Part No.	Description
Win XPE	2070004038	XPE FP2007 AIMB-552 V3.1ENG

Value-Added Software Services

Software API: An interface that defines the ways by which an application program may request services from libraries and/or operating systems. Provides not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speeds development, enhances security and offers add-on value for Advantech platforms. It plays the role of catalyst between developer and solution, and makes Advantech embedded platforms easier and simpler to adopt and operate with customer applications.

Software APIs

Control

GPIO

General Purpose Input/Output is a flexible parallel interface that allows a variety of custom connections. It allows users to monitor the level of signal input or set the output status to switch on/off a device. Our API also provides Programmable GPIO, which allows developers to dynamically set the GPIO input or output status.

SMBus

SMBus is the System Management Bus defined by Intel® Corporation in 1995. It is used in personal computers and servers for low-speed system management communications. The SMBus API allows a developer to interface with an embedded system environment and transfer serial messages using the SMBus protocols, allowing multiple simultaneous device control.

I²C

I²C is a bi-directional two-wire bus that was developed by Philips for use in their televisions in the 1980s. The I²C API allows a developer to interface with an embedded system environment and transfer serial messages using the I²C protocols, allowing multiple simultaneous device control.

Display

Brightness Control

The Brightness Control API allows a developer to interface with an embedded device to easily control brightness.

Backlight

The Backlight API allows a developer to control the backlight (screen) on/off in an embedded device.

Monitor

Watchdog

A watchdog timer (WDT) is a device that performs a specific operation after a certain period of time if something goes wrong and the system does not recover on its own. A watchdog timer can be programmed to perform a warm boot (restarting the system) after a certain number of seconds.

Hardware Monitor

The Hardware Monitor (HWM) API is a system health supervision API that inspects certain condition indexes, such as fan speed, temperature and voltage.

Hardware Control

The Hardware Control API allows developers to set the PWM (Pulse Width Modulation) value to adjust fan speed or other devices; it can also be used to adjust the LCD brightness.

Power Saving

CPU Speed

Make use of Intel SpeedStep technology to reduce power consumption. The system will automatically adjust the CPU Speed depending on system loading.

System Throttling

Refers to a series of methods for reducing power consumption in computers by lowering the clock frequency. These APIs allow the user to lower the clock from 87.5% to 12.5%.

Software Utilities

BIOS Flash

The BIOS Flash utility allows customers to update the flash ROM BIOS version, or use it to back up current BIOS by copying it from the flash chip to a file on customers' disk. The BIOS Flash utility also provides a command line version and API for fast implementation into customized applications.

Embedded Security ID

The embedded application is the most important property of a system integrator. It contains valuable intellectual property, design knowledge and innovation, but it is easily copied! The Embedded Security ID utility provides reliable security functions for customers to secure their application data within embedded BIOS.

Monitoring

The Monitoring utility allows the customer to monitor system health, including voltage, CPU and system temperature and fan speed. These items are important to a device; if critical errors happen and are not solved immediately, permanent damage may be caused.

eSOS

The eSOS is a small OS stored in BIOS ROM. It will boot up in case of a main OS crash. It will diagnose the hardware status, and then send an e-mail to a designated administrator. The eSOS also provides remote connection: Telnet server and FTP server, allowing the administrator to rescue the system.

Flash Lock

Flash Lock is a mechanism that binds the board and CF card (SQFlash) together. The user can "Lock" SQFlash via the Flash Lock function and "Unlock" it via BIOS while booting. A locked SQFlash cannot be read by any card reader or boot from other platforms without a BIOS with the "Unlock" feature.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
