

# 851 Greenback Printed Circuit Board Tape

---

## Product Data Sheet

---

Updated : March 1996  
Supersedes : October 1993

---

**Product Description**      A green polyester film tape with a special conformable adhesive which resists plating bath chemicals.

---

**Physical Properties**  
Not for specification purposes

|                                |                                                                                                                  |  |
|--------------------------------|------------------------------------------------------------------------------------------------------------------|--|
| <b>Adhesive Type</b>           | Special blend of Silicone and Rubber                                                                             |  |
| <b>Backing</b>                 | Transparent polyester                                                                                            |  |
| <b>Thickness</b> (ASTM D-3652) | 100 µm                                                                                                           |  |
| <b>Tape Colour</b>             | Translucent green                                                                                                |  |
| <b>Shelf Life</b>              | 12 months from date of despatch by 3M when stored in the original carton at 21°C (70°F) & 50 % Relative Humidity |  |

---

**Performance Characteristics**  
Not for specification purposes

|                                                               |             |  |
|---------------------------------------------------------------|-------------|--|
| <b>Adhesion to Stainless Steel</b> <small>ASTM D-3330</small> | 2.7 N/10mm  |  |
| <b>Tensile Strength</b> <small>ASTM D-3759</small>            | 36.8 N/10mm |  |
| <b>Elongation at Break</b> <small>ASTM D-3759</small>         | 56 %        |  |
| <b>Temperature Range</b><br>Maximum                           | 90 °C       |  |

Board Tape

|                                       |                                                                                                                                                                     |                                                                                                                                                                                                                                                      |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Additional Product Information</b> | Shelf life - important to rotate inventory.                                                                                                                         |                                                                                                                                                                                                                                                      |
| <b>Application Techniques</b>         | <p>Low stretch polyester film for machine, as well as hand application.</p> <p>Solvent clean-up of the board is recommended to facilitate subsequent soldering.</p> | <p>Tape must be firmly pressed down by equipment with rubber covered rollers or a rubber covered platen press. Hand rolling usually does not provide enough pressure. A vivid outline of the circuit leads indicates adequate pressure was used.</p> |
| <b>Applications</b>                   | For masking printed circuit boards during solder stripping and precious metal plating of fingers.                                                                   | Splicing of silicone coated papers.                                                                                                                                                                                                                  |

| FEATURES                     | ADVANTAGES                                                                                                                                       | BENEFITS                                                                            |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Polyester backing.           | Reduces stretch and recovery of tape and associated uneven stop-off line.                                                                        | Saves money by reducing number of reject boards.                                    |
| Thick adhesive coating.      | Reduces undercutting because adhesive blocks out solutions between fingers.                                                                      | Saves money by reducing reject boards.                                              |
| Specially designed adhesive. | <p>Tape generally performs better when no ovens are used to heat tape and boards.</p> <p>Reduces adhesive transfer to printed circuit board.</p> | <p>Saves energy and labour costs.</p> <p>Saves money by reducing clean-up time.</p> |

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
