Description

This Cypress series of network circuits are produced using advanced 0.35-micron CMOS technology, achieving the industry's fastest logic.

The Cypress CY2DP818 fanout buffer features a single LVDS or a single-ended LVTTL-compatible input and eight LVPECL output pairs.

Designed for data-communications clock-management applications, the large fanout from a single input reduces loading on the input clock.

The CY2DP818 is ideal for both level translations from single-ended to LVPECL and/or for the distribution of LVPECL-based clock signals.

The Cypress CY2DP818 has configurable input functions. The input is user configurable via the Inconfig pin for single ended or differential input.
