

CW Series LTE Band 14 Single-Band Connectorized Monopole Antenna

CW Series antennas are rugged, low-cost and easy to install. The single frequency band of CW antennas makes the job of antenna selection simple, with better performance in the target frequency band than in multiband antennas and rejection of signals from unwanted frequencies.

The CW LTE Band 14 antenna targets 750 MHz to 800 MHz with excellent VSWR, gain and efficiency for LTE Band 14 and FirstNet® Public Safety applications.

This rugged 1/4-wave monopole antenna may be used with plastic or metal enclosures and supports weather-resistant applications.

Features

- Outperforms similar multiband solutions
- Durable, flexible main shaft
- Weather resistant for IP-rated applications¹
- Wide bandwidth
- O-ring compatible base
- Compatible with plastic² and metal enclosures
- High gain (1.1 dBi at 750 MHz, 1.8 dBi at 778 MHz and 1.3 dBi at 800 MHz)
- High efficiency (70% at 750 MHz, 78% at 778 MHz and 72% at 800 MHz)

Applications

- LTE Band 14
- FirstNet® Public Safety
- LTE-M (Cat-M1) and NB-IoT devices
- Hand-held devices
- Internet of Things (IoT) devices

Ordering Information

| Part Number | Description |
|-------------------|--|
| ANT-B14-CW-QW-SMA | LTE Band 14 CW Series antenna with SMA connector |

Available from Linx Technologies and select distributors and representatives.

Notes

- ¹ Use of an O-ring is recommended, IP-ratings cannot be guaranteed
- ² With appropriate counterpoise

Electrical Specifications

| | ANT-B14-CW-QW-SMA |
|-----------------------|--------------------|
| Frequency Range | 750 MHz to 800 MHz |
| Center Frequency | 778 MHz |
| VSWR | ≤ 2.0 : 1 |
| Peak Gain | 1.9 dBi |
| Polarization | Linear |
| Radiation | Omnidirectional |
| Max Power | 10 W |
| Wavelength | 1/4-wave |
| Impedance | 50 Ω |
| Connection | SMA plug (male) |
| Height | 94.2 mm (3.71 in) |
| Weight | 13.6 g (0.48 oz) |
| Operating Temperature | -40 °C to +90 °C |

Electrical specifications and plots measured with a 102 mm x 102 mm (4 in x 4 in) reference ground plane.

VSWR

Figure 1 and Figure 2 provide the voltage standing wave ratio (VSWR) across the antenna bandwidth. VSWR describes the power reflected from the antenna back to the radio. A lower VSWR value indicates better antenna performance at a given frequency. Reflected power is also shown on the right-side vertical axis as a gauge of the percentage of transmitter power reflected back from the antenna.

Figure 1. CW LTE Band 14 Antenna VSWR with Band 14 Uplink/Downlink Highlights

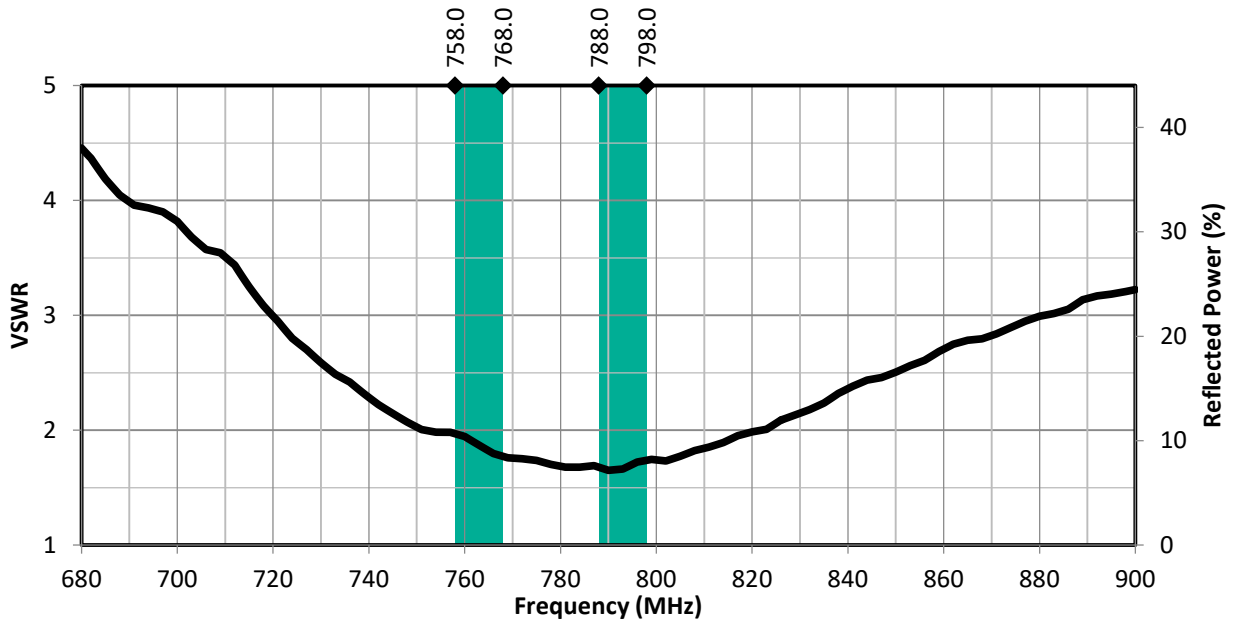

Figure2. CW LTE Band 14 Antenna Full Bandwidth VSWR

Return Loss

Return loss (Figure3), represents the loss in power at the antenna due to reflected signals. Like VSWR, a lower return loss value indicates better antenna performance at a given frequency.

Figure3. CW LTE Band 14 Antenna Return Loss with Band 14 Uplink/Downlink Highlights

Peak Gain

The peak gain across the antenna bandwidth is shown in Figure 4. Peak gain represents the maximum antenna input power concentration across 3-dimensional space, and therefore peak performance, at a given frequency, but does not consider any directionality in the gain pattern.

Figure 4. CW LTE Band 14 Antenna Peak Gain with Band 14 Uplink/Downlink Highlights

Average Gain

Average gain (Figure 5), is the average of all antenna gain in 3-dimensional space at each frequency, providing an indication of overall performance without expressing antenna directionality.

Figure 5. CW LTE Band 14 Antenna Average Gain with Band 14 Uplink/Downlink Highlights

Datasheet

Radiation Efficiency

Radiation efficiency (Figure 6), shows the ratio of power delivered to the antenna relative to the power radiated at the antenna, expressed as a percentage, where a higher percentage indicates better performance at a given frequency.

Figure 6. CW LTE Band 14 Antenna Radiation Efficiency with Band 14 Uplink/Downlink Highlights

Product Dimensions

Figure 7. CW LTE Band 14 Antenna Dimensions

Counterpoise

Quarter-wave or monopole antennas require an associated ground plane counterpoise for proper operation. The size and location of the ground plane relative to the antenna will affect the overall performance of the antenna in the final design. When used in conjunction with a ground plane smaller than that used to tune the antenna, the center frequency typically will shift higher in frequency and the bandwidth will decrease. The proximity of other circuit elements and packaging near the antenna will also affect the final performance.

For further discussion and guidance on the importance of the ground plane counterpoise, please refer to Linx Application Note AN-00501: Understanding Antenna Specifications and Operation.

Datasheet

Radiation Patterns

Radiation patterns provide information about the directionality and 3-dimensional gain performance of the antenna by plotting gain at specific frequencies in three orthogonal planes. Antenna radiation patterns (Figure9), are shown using polar plots covering 360 degrees. The antenna graphic above the plots provides reference to the plane of the column of plots below it. Note: when viewed with typical PDF viewing software, zooming into radiation patterns is possible to reveal fine detail.

758 MHz to 798 MHz (778 MHz)

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
