5.5 kV time-current curves — minimum melting

5.5 kV time-current curves — total clearing

5.5 kV cut-off curves

- Notes:**
1. Curves show extreme maximum values which will not be exceeded under conditions stated in notes 2 and 3 below.
 2. For high values of prospective current, a symmetrical fault gives the highest cut-off current. For low values of prospective current, where there is little or no current limitation, an asymmetrical fault passes the highest peak current. The curves are therefore based upon the degree of asymmetry which gives the maximum cut-off current at any particular value of prospective current.
 3. Curves related to frequency of 60 Hz and a recovery voltage equal to the fuse's rated voltage.
