

### SUMMARY DATASHEET

#### Description

Based on the ARM926EJ-S™ processor, the Atmel® SAM9N12/CN11/CN12 devices offer the frequently-requested combination of user interface functionality and high data rate connectivity, with LCD Controller, resistive touch-screen, multiple UARTs, SPI, I2C, full-speed USB Host and Device and SDIO.

The SAM9N12/CN11/CN12 support the latest generation of LPDDR/DDR2 and NAND Flash memory interfaces for program and data storage. An internal 133 MHz multi-layer bus architecture associated with eight DMA channels and distributed memory – including a 32-Kbyte SRAM – sustains the high bandwidth required by the processor and the high-speed peripherals.

The SAM9CN12/CN11 offers on-chip hardware accelerators with DMA support that enable high-speed data encryption and authentication of transferred data or applications. Supported standards are up to 256-bit AES, and FIPS Publication 180-2 compliant SHA1 and SHA256. A True Random Number Generator is embedded for key generation and exchange protocols. The devices also feature fuse bits for crypto key (SAM9CN12), user configuration (SAM9N12 and SAM9CN11) and device configuration (all). The SAM9CN12 includes a secured Boot ROM; the SAM9N12 and SAM9CN11 include a standard Boot ROM.

The I/Os support 1.8V or 3.3V operation and are independently configurable for the memory interface and peripheral I/Os. This feature eliminates the need for any external level shifters, while 0.8 ball pitch packages lower PCB cost and complexity.

The SAM9N12/CN11/CN12 power management controllers feature efficient clock gating and a battery backup section that minimizes power consumption in active and standby modes. There are several devices. The table that follows presents the embedded features of each device.

| Device                 | SAM9N12 | SAM9CN11 | SAM9CN12 |
|------------------------|---------|----------|----------|
| Standard Boot with BSC | X       | X        | –        |
| Secured Boot           | –       | –        | X        |
| TRNG                   | X       | X        | X        |
| AES                    | –       | X        | X        |
| SHA                    | –       | X        | X        |

This is a summary document.

# 1. Features

- Core
  - ARM926EJ-S™ ARM® Thumb® Processor running up to 400 MHz
  - 16 Kbytes Data Cache, 16 Kbytes Instruction Cache, Memory Management Unit
- Memories
  - One 128-Kbyte internal ROM embedding standard or secure bootstrap routine.
  - One 32-Kbyte internal SRAM, single-cycle access at system speed
  - 32-bit External Bus Interface supporting 8-bank DDR2/LPDDR, SDR/LPDDR, Static Memories
  - MLC/SLC NAND Controller, with up to 24-bit Programmable Multi-bit Error Correcting Code (PMECC)
  - System running up to 133 MHz
  - Power-on Reset, Reset Controller, Shut Down Controller, Periodic Interval Timer, Watchdog Timer and Real Time Clock
  - Boot Mode Select Option, Remap Command
  - Internal Low Power 32 kHz RC and Fast 12 MHz RC Oscillators
  - Selectable 32768 Hz Low-power Oscillator, 16 MHz Oscillator, one PLL for the system and one PLL optimized for USB
  - Six 32-bit-layer AHB Bus Matrix
  - Dual Peripheral Bridge with dedicated programmable clock
  - One dual port 8-channel DMA Controller
  - Advanced Interrupt Controller and Debug Unit
  - Two Programmable External Clock Signals
- Low-power Mode
  - Shut Down Controller with four 32-bit battery backup registers
  - Clock Generator and Power Management Controller
  - Very Slow Clock Operating Mode, Software Programmable Power Optimization Capabilities
- Peripherals
  - LCD Controller
  - USB Device Full Speed with dedicated On-Chip Transceiver
  - USB Host Full Speed with dedicated On-Chip Transceiver
  - One High speed SD card and SDIO Host Controller
  - Two Master/Slave Serial Peripheral Interfaces
  - Two Three-channel 32-bit Timer/Counters
  - One Synchronous Serial Controller
  - One Four-channel 16-bit PWM Controller
  - Two Two-wire Interfaces
  - Four USARTs, two UARTs, one DBGU
  - One 12-channel 10-bit Analog-to-Digital Converter with up to 5-wire resistive Touch screen support
- Safety
  - Crystal Failure Detection
  - Independent Watchdog
  - Power-on Reset Cells
  - Write Protection Registers
  - SHA (SHA1 and SHA256) Compliant with FIPS Publication 180-2, see the device configuration table in ["Description"](#)

- Cryptography
  - TRNG True Random Number Generator compliant with NIST Special Publication 800-22
  - AES 256-, 192-, 128-bit Key Algorithm compliant with FIPS Publication 197 (except for SAM9N12)
  - 256 Fuse bits for crypto key and 64 Fuse bits for device configuration, including JTAG disable and forced boot from the on-chip ROM
- I/O
  - Four 32-bit Parallel Input/Output Controllers
  - 105 Programmable I/O Lines Multiplexed with up to Three Peripheral I/Os
  - Input Change Interrupt Capability on Each I/O Line, optional Schmitt Trigger input
  - Individually Programmable Open-drain, Pull-up and Pull-down Resistor, Synchronous Output
- Packages
  - 217-ball BGA, pitch 0.8 mm
  - 247-ball BGA, pitch 0.5 mm

### 3. Signal Description

Table 3-1 gives details on the signal names classified by peripheral.

Table 3-1. Signal Description List

| Signal Name                                       | Function                     | Type   | Active Level |
|---------------------------------------------------|------------------------------|--------|--------------|
| <b>Clocks, Oscillators and PLLs</b>               |                              |        |              |
| XIN                                               | Main Oscillator Input        | Input  |              |
| XOUT                                              | Main Oscillator Output       | Output |              |
| XIN32                                             | Slow Clock Oscillator Input  | Input  |              |
| XOUT32                                            | Slow Clock Oscillator Output | Output |              |
| PCK0 - PCK1                                       | Programmable Clock Output    | Output |              |
| <b>Shutdown, Wakeup Logic</b>                     |                              |        |              |
| SHDN                                              | Shut-Down Control            | Output |              |
| WKUP                                              | Wake-Up Input                | Input  |              |
| <b>ICE and JTAG</b>                               |                              |        |              |
| TCK                                               | Test Clock                   | Input  |              |
| TDI                                               | Test Data In                 | Input  |              |
| TDO                                               | Test Data Out                | Output |              |
| TMS                                               | Test Mode Select             | Input  |              |
| JTAGSEL                                           | JTAG Selection               | Input  |              |
| RTCK                                              | Return Test Clock            | Output |              |
| <b>Reset/Test</b>                                 |                              |        |              |
| NRST                                              | Microcontroller Reset        | I/O    | Low          |
| NTRST                                             | Test Reset Signal            | Input  |              |
| BMS                                               | Boot Mode Select             | Input  |              |
| <b>Debug Unit - DBGU</b>                          |                              |        |              |
| DRXD                                              | Debug Receive Data           | Input  |              |
| DTXD                                              | Debug Transmit Data          | Output |              |
| <b>Advanced Interrupt Controller - AIC</b>        |                              |        |              |
| IRQ                                               | External Interrupt Input     | Input  |              |
| FIQ                                               | Fast Interrupt Input         | Input  |              |
| <b>PIO Controller - PIOA - PIOB - PIOC - PIOD</b> |                              |        |              |
| PA0 - PA31                                        | Parallel IO Controller A     | I/O    |              |
| PB0 - PB18                                        | Parallel IO Controller B     | I/O    |              |
| PC0 - PC31                                        | Parallel IO Controller C     | I/O    |              |
| PD0 - PD21                                        | Parallel IO Controller D     | I/O    |              |

Table 3-1. Signal Description List (Continued)

| Signal Name                                                            | Function                          | Type   | Active Level |
|------------------------------------------------------------------------|-----------------------------------|--------|--------------|
| <b>External Bus Interface - EBI</b>                                    |                                   |        |              |
| D0 -D15                                                                | Data Bus                          | I/O    |              |
| D16 -D31                                                               | Data Bus                          | I/O    |              |
| A0 - A25                                                               | Address Bus                       | Output |              |
| NWAIT                                                                  | External Wait Signal              | Input  | Low          |
| <b>Static Memory Controller - SMC</b>                                  |                                   |        |              |
| NCS0 - NCS5                                                            | Chip Select Lines                 | Output | Low          |
| NWR0 - NWR3                                                            | Write Signal                      | Output | Low          |
| NRD                                                                    | Read Signal                       | Output | Low          |
| NWE                                                                    | Write Enable                      | Output | Low          |
| NBS0 - NBS3                                                            | Byte Mask Signal                  | Output | Low          |
| <b>NAND Flash Support</b>                                              |                                   |        |              |
| NFD0-NFD15                                                             | NAND Flash I/O                    | I/O    |              |
| NANDCS                                                                 | NAND Flash Chip Select            | Output | Low          |
| NANDOE                                                                 | NAND Flash Output Enable          | Output | Low          |
| NANDWE                                                                 | NAND Flash Write Enable           | Output | Low          |
| <b>DDR2/SDRAM/LPDDR Controller</b>                                     |                                   |        |              |
| SDCK,#SDCK                                                             | DDR2/SDRAM differential clock     | Output |              |
| SDCKE                                                                  | DDR2/SDRAM Clock Enable           | Output | High         |
| SDCS                                                                   | DDR2/SDRAM Controller Chip Select | Output | Low          |
| BA[0..2]                                                               | Bank Select                       | Output | Low          |
| SDWE                                                                   | DDR2/SDRAM Write Enable           | Output | Low          |
| RAS - CAS                                                              | Row and Column Signal             | Output | Low          |
| SDA10                                                                  | SDRAM Address 10 Line             | Output |              |
| DQS[0..1]                                                              | Data Strobe                       | I/O    |              |
| DQM[0..3]                                                              | Write Data Mask                   | Output |              |
| <b>High Speed Multimedia Card Interface - HSMCI</b>                    |                                   |        |              |
| MCI_CK                                                                 | Multimedia Card Clock             | I/O    |              |
| MCI_CDA                                                                | Multimedia Card Slot Command      | I/O    |              |
| MCI_DA0 - MCI_DA7                                                      | Multimedia Card Slot Data         | I/O    |              |
| <b>Universal Synchronous Asynchronous Receiver Transmitter- USARTx</b> |                                   |        |              |
| SCKx                                                                   | USARTx Serial Clock               | I/O    |              |
| TXDx                                                                   | USARTx Transmit Data              | Output |              |
| RXDx                                                                   | USARTx Receive Data               | Input  |              |
| RTSx                                                                   | USARTx Request To Send            | Output |              |

When “Reset State” is stated, the configuration is defined by the “Reset State” column of the Pin Description table.

# 4. Package and Pinout

The SAM9CN12 is available in 217-ball and 247-ball BGA packages.

## 4.1 Mechanical Overview of the 217-ball BGA Package

Figure 4-1 shows the orientation of the 217-ball BGA Package

Figure 4-1. Orientation of the 217-ball BGA Package

## 4.2 Mechanical Overview of the 247-ball BGA Package

Figure 4-2 shows the orientation of the 247-ball BGA Package

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
