

## 32-Channel Vacuum Fluorescent Display Driver

### Features

- Thirty-two Output Lines
- 90V Output Swing
- Active Pull-down
- Latches on all Outputs
- Up to 6 MHz at  $V_{DD} = 5V$
- $-40^{\circ}C$  to  $+85^{\circ}C$  Operation

### Applications

- Vacuum Fluorescent Displays
- DC Plasma Displays

### General Description

The HV518 is designed for vacuum fluorescent or DC plasma applications where it can serve as a segment, digit or matrix display driver. Each device has 32 outputs, 32 latches and a 32-bit cascadable Shift register.

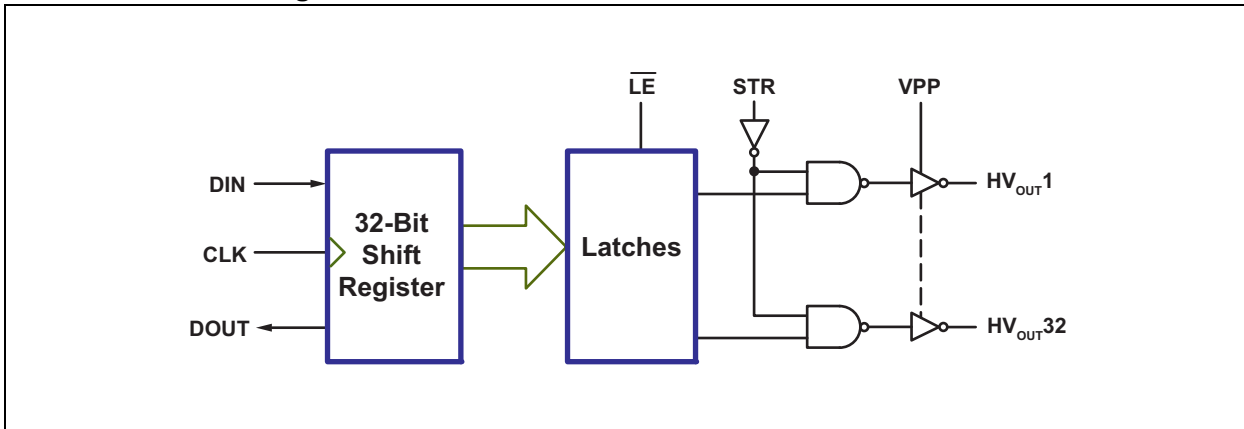

Serial data enters the Shift register on the low-to-high transition of the clock input. With latch enable ( $\overline{LE}$ ) high, parallel data is transferred to the output buffers through a 32-bit latch. When  $\overline{LE}$  is low, the data is stored in the latch. When strobe (STR) is low, all outputs are enabled. If the strobe is high, all outputs are low.

Low-voltage Supply Voltage, $V_{DD}$	.....	-0.5V to +6V
High-voltage Supply Voltage, $V_{PP}$	.....	-0.5V to +90V
Logic Input Levels	.....	-0.5V to $V_{DD}+0.5V$
Operating Ambient Temperature, $T_A$	.....	-40°C to +85°C
Storage Temperature, $T_S$	.....	-65°C to +150°C
Continuous Total Power Dissipation:		
40-lead PDIP ( <b>Note 1</b> , <b>Note 2</b> )	.....	1200 mW
44-lead PLCC ( <b>Note 1</b> , <b>Note 2</b> )	.....	1200 mW

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

- Note 1:** Duty cycle is limited by the total power dissipated in the package.  
**Note 2:** For operations above 25°C ambient, derate linearly to 85°C at 20 mW/°C.

Example

<b>Legend:</b>	XX...X	Product Code or Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC® designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
