Contact Data (continued)	
Mechanical endurance	>1x10 <sup>6</sup> ops.
1) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10. 2) Current and time are compatible with circuit protection by a typical automotive fuse. Relay will make, carry and break the specified current. 3) See chapter Diagnostics of Relays in our Application Notes or consult the internet at <a href="http://relays.te.com/appnotes/">http://relays.te.com/appnotes/</a> 4) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.	

Coil Data					
Rated coil voltage	12/24VDC				
Coil versions, DC coil					
Coil code	Rated voltage VDC	Operate voltage VDC	Release voltage VDC	Coil resistance <sup>5)</sup> Ω±10%	Rated coil power <sup>5)</sup> W

5) Without components in parallel.  
All figures are given for coil without pre-energization, at ambient temperature +23°C.

Max. DC load breaking capacity

Load limit curve 1: arc extinguishes during transit time (changeover contact).  
Load limit curve 2: safe shutdown, no stationary arc (make contact).  
Load limit curves measured with low inductive resistors verified for 1000 switching events.

Coil operating range

Does not take into account the temperature rise due to the contact current  
E = pre-energization.
