

ADG711/ADG712/ADG713

FEATURES

- 1.8 V to 5.5 V single supply**
- Low on resistance (2.5 Ω Typ)**
- Low on resistance flatness**
- 3 dB bandwidth > 200 MHz**
- Rail-to-rail operation**
- 16-lead TSSOP and SOIC packages**
- Fast switching times: $t_{ON} = 16$ ns, $t_{OFF} = 10$ ns**
- Typical power consumption (< 0.01 μ W)**
- TTL/CMOS compatible**
- Qualified for automotive applications**

APPLICATIONS

- USB 1.1 signal switching circuits**
- Cell phones**
- PDAs**
- Battery-powered systems**
- Communication systems**
- Sample hold systems**
- Audio signal routing**
- Video switching**
- Mechanical reed relay replacement**

GENERAL DESCRIPTION

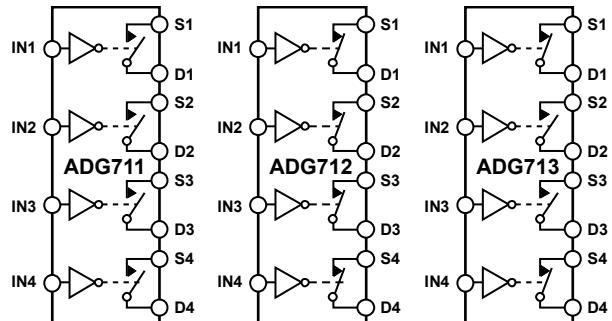

The ADG711, ADG712, and ADG713 are monolithic CMOS devices containing four independently selectable switches. These switches are designed on an advanced submicron process that provides low power dissipation yet gives high switching speed, low on resistance, low leakage currents, and high bandwidth.

They are designed to operate from a single 1.8 V to 5.5 V supply, making them ideal for use in battery-powered instruments and with the new generation of DACs and ADCs from Analog Devices, Inc. Fast switching times and high bandwidth make the parts suitable for switching USB 1.1 data signals and video signals.

The ADG711, ADG712, and ADG713 contain four independent single-pole/single-throw (SPST) switches. The ADG711 and ADG712 differ only in that the digital control logic is inverted. The ADG711 switches are turned on with a logic low on the appropriate control input, while a logic high is required to turn on the switches of the ADG712. The ADG713 contains two switches whose digital control logic is similar to the ADG711, while the logic is inverted on the other two switches.

Each switch conducts equally well in both directions when On. The ADG713 exhibits break-before-make switching action.

FUNCTIONAL BLOCK DIAGRAM

SWITCHES SHOWN FOR A LOGIC "1" INPUT

Figure 1.

00042-001

The ADG711/ADG712/ADG713 are available in 16-lead TSSOP and 16-lead SOIC packages.

PRODUCT HIGHLIGHTS

1. 1.8 V to 5.5 V Single-Supply Operation.
The ADG711, ADG712, and ADG713 offer high performance and are fully specified and guaranteed with 3 V and 5 V supply rails.
2. Very Low R_{ON} (4.5 Ω maximum at 5 V, 8 Ω maximum at 3 V). At supply voltage of 1.8 V, R_{ON} is typically 35 Ω over the temperature range.
3. Low On Resistance Flatness.
4. -3 dB Bandwidth >200 MHz.
5. Low Power Dissipation. CMOS construction ensures low power dissipation.
6. Fast t_{ON}/t_{OFF} .
7. Break-Before-Make Switching.
This prevents channel shorting when the switches are configured as a multiplexer (ADG713 only).
8. 16-Lead TSSOP and 16-Lead SOIC Packages.

ABSOLUTE MAXIMUM RATINGS

$T_A = +25^\circ\text{C}$, unless otherwise noted.

Table 3.

Parameter	Rating
V_{DD} to GND	-0.3 V to +6 V
Analog, Digital Inputs ¹	-0.3 V to $V_{DD} + 0.3$ V or 30 mA, whichever occurs first
Continuous Current, S or D	30 mA
Peak Current, S or D	100 mA (Pulsed at 1 ms, 10% duty cycle maximum)
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	150°C
TSSOP Package, Power Dissipation	430 mW
θ_{JA} Thermal Impedance	150°C/W
θ_{JC} Thermal Impedance	27°C/W
SOIC Package, Power Dissipation	520 mW
θ_{JA} Thermal Impedance	125°C/W
θ_{JC} Thermal Impedance	42°C/W
Lead Temperature, Soldering	
Vapor Phase (60 sec)	215°C
Infrared (15 sec)	220°C
Soldering(Pb-Free)	
Reflow, Peak Temperature	260(+0/-5)°C
Time at Peak Temperature	20 sec to 40 sec
ESD	2 kV

¹ Overvoltages at IN, S or D will be clamped by internal diodes. Currents should be limited to the maximum ratings given.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating may be applied at any one time.

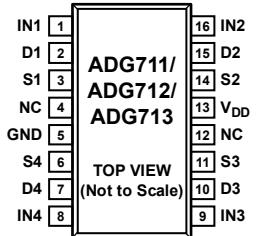

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Figure 2. Pin Configuration

Table 4.

Pin Number	Mnemonic	Description
1	IN1	Digital Control Input. Its logic state controls the status of the Switch S1-D1.
2	D1	Drain Pin. Can be used as input or output.
3	S1	Source Pin. Can be used as input or output.
4	NC	Not internally connected.
5	GND	The most negative power supply pin.
6	S4	Source Pin. Can be used as input or output.
7	D4	Drain Pin. Can be used as input or output.
8	IN4	Digital Control Input. Its logic state controls the status of the Switch S4-D4.
9	IN3	Digital Control Input. Its logic state controls the status of the Switch S3-D3.
10	D3	Drain Pin. Can be used as input or output.
11	S3	Source Pin. Can be used as input or output.
12	NC	Not internally connected.
13	V _{DD}	The most positive power supply pin.
14	S2	Source Pin. Can be used as input or output.
15	D2	Drain Pin. Can be used as input or output.
16	IN2	Digital Control Input. Its logic state controls the status of the Switch S3-D3.

CHANNEL-TO-CHANNEL CROSSTALK = $20 \times \log |V_S/V_{OUT}|$

Figure 18. Channel-to-Channel Crosstalk

TERMINOLOGY

R_{ON}

Ohmic resistance between D and S.

ΔR_{ON}

On resistance match between any two channels, ie., R_{ONmax} – R_{ONmin}.

R_{FLAT(ON)}

Flatness is defined as the difference between the maximum and minimum value of on resistance as measured over the specified analog signal range.

I_{S (OFF)}

Source leakage current with the switch off.

I_{D (OFF)}

Drain leakage current with the switch off.

I_{D, I_{S (ON)}}

Channel leakage current with the switch on.

V_{D (Vs)}

Analog voltage on Terminals D, S.

C_{S (OFF)}

Off switch source capacitance.

C_{D (OFF)}

Off switch drain capacitance.

C_{D, C_{S (ON)}}

On switch capacitance.

t_{ON}

Delay between applying the digital control input and the output switching on.

t_{OFF}

Delay between applying the digital control input and the output switching off.

t_D

Off time or on time measured between the 90% points of both switches, when switching from one address state to another ([ADG713](#) only).

Crosstalk

A measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance.

Off Isolation

A measure of unwanted signal coupling through an off switch.

Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during switching.

Bandwidth

The frequency at which the output is attenuated by 3 dB.

On Response

The frequency response of the on switch.

ADG711/ADG712/ADG713

APPLICATIONS INFORMATION

Figure 20 illustrates a photodetector circuit with programmable gain. An AD820 is used as the output operational amplifier.

With the resistor values shown in the circuit, and using different combinations of the switches, gain in the range of 2 to 16 can be achieved.

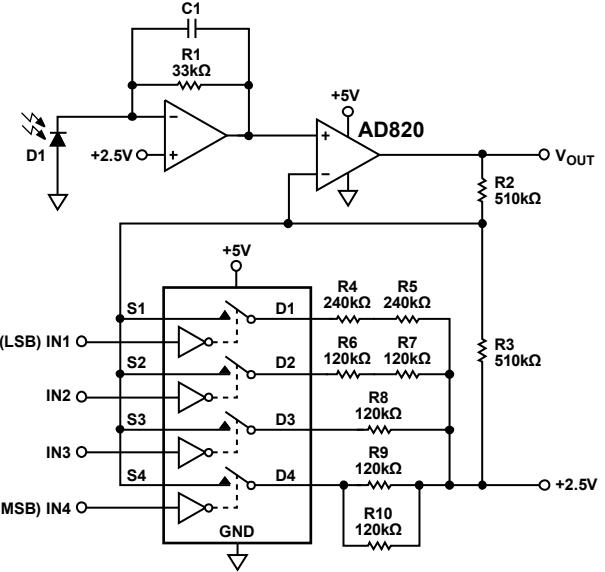

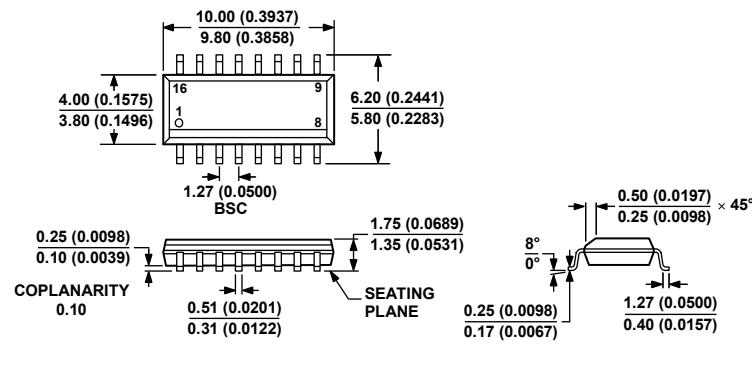

Figure 20. Photodetector Circuit with Programmable Gain

¹ Z = RoHS Compliant Part.

² W = Qualified for Automotive Applications.

AUTOMOTIVE PRODUCTS

The AD711W models are available with controlled manufacturing to support the quality and reliability requirements of automotive applications. Note that these automotive models may have specifications that differ from the commercial models; therefore, designers should review the Specifications section of this data sheet carefully. Only the automotive grade products shown are available for use in automotive applications. Contact your local Analog Devices account representative for specific product ordering information and to obtain the specific Automotive Reliability reports for these models.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
