

# MAX6803/MAX6804/ MAX6805

# 4-Pin, Low-Power µP Reset Circuits with Manual Reset

## General Description

The MAX6803/MAX6804/MAX6805 microprocessor (µP) supervisory circuits monitor the power supplies in 2.85V to 5.0V µP and digital systems. They increase circuit reliability and reduce cost by eliminating external components and adjustments. They also feature a debounced manual-reset input.

These devices perform a single function: they assert a reset signal whenever the  $V_{CC}$  supply voltage declines below a preset threshold or whenever manual reset is asserted. Reset remains asserted for a preset timeout period after  $V_{CC}$  has risen above the reset threshold or after manual reset is deasserted. The only difference among the three devices is their output. The MAX6804 (push/pull) and MAX6805 (open-drain) have an active-low  $\overline{\text{RESET}}$  output, while the MAX6803 (push/pull) has an active-high RESET output. The MAX6803/MAX6804 are guaranteed to be in the correct state for  $V_{CC}$  down to 0.7V. The MAX6805 is guaranteed to be in the correct state for  $V_{CC}$  down to 1.0V.

The reset comparator in these ICs is designed to ignore fast transients on  $V_{CC}$ . Reset thresholds are factory-trimmable between 2.63V and 4.80V, in approximately 100mV increments. These devices are available with a 1ms min, 20ms min, or 100ms min reset timeout period. Ideal for space-critical applications, the MAX6803/MAX6804/MAX6805 come packaged in a 4-pin SOT143. For a lower threshold voltage version, see the MAX6335/MAX6336/MAX6337.

## Applications

- Computers
- Controllers
- Intelligent Instruments
- Critical µP/µC Power Monitoring
- Portable/Battery-Powered Equipment

**Typical Operating Circuit and Pin Configuration appear at end of data sheet.**

**Selector Guide appears at end of data sheet.**

## Features

- Ultra-Low 0.7V Operating Supply Voltage
- Low 4.0µA Supply Current
- Precision Monitoring of 2.85V to 5.0V Power-Supply Voltages
- Reset Thresholds Available from 2.63V to 4.80V, in Approximately 100mV Increments
- Debounced Manual-Reset Input
- Fully Specified over Temperature
- Three Power-On Reset Timeout Periods Available (1ms min, 20ms min, 100ms min)
- Low Cost
- Three Available Output Structures: Push/Pull  $\overline{\text{RESET}}$ , Push/Pull RESET, Open-Drain  $\overline{\text{RESET}}$
- Guaranteed RESET/ $\overline{\text{RESET}}$  Valid to  $V_{CC} = 0.7V$  (MAX6803/MAX6804)
- Power-Supply Transient Immunity
- No External Components Required
- 4-Pin SOT143 Package
- Pin Compatible with MAX811/MAX812 and MAX6314/MAX6315

## Ordering Information

| PART*           | TEMP RANGE      | PIN-PACKAGE |
|-----------------|-----------------|-------------|
| MAX6803US__D__T | -40°C to +125°C | 4 SOT143    |
| MAX6804US__D__T | -40°C to +125°C | 4 SOT143    |
| MAX6805US__D__T | -40°C to +125°C | 4 SOT143    |

\*These devices are available in factory-set  $V_{CC}$  reset thresholds from 2.63V to 4.80V, in approximately 0.1V increments. Choose the desired reset threshold suffix from Table 1 and insert it in the blanks following "US" in the part number. Factory-programmed reset timeout periods are also available. Insert the number corresponding to the desired nominal reset timeout period (1 = 1ms min, 2 = 20ms min, 3 = 100ms min) in the blank following "D" in the part number. There are 15 standard versions with a required order increment of 2500 pieces. Sample stock is generally held on the standard versions only (see Selector Guide). Contact the factory for availability of non-standard versions (required order increment is 10,000 pieces). All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

### Absolute Maximum Ratings

Terminal Voltage (with respect to GND)

|                                                 |                              |
|-------------------------------------------------|------------------------------|
| $V_{CC}$ .....                                  | -0.3V to +6V                 |
| Push/Pull RESET or RESET, $\overline{MR}$ ..... | -0.3V to ( $V_{CC} + 0.3V$ ) |
| Open-Drain RESET .....                          | -0.3V to +6V                 |
| Input Current ( $V_{CC}$ ).....                 | 20mA                         |
| Output Current (RESET, RESET) .....             | 20mA                         |

Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ )

|                                                |                 |
|------------------------------------------------|-----------------|
| 4-Pin SOT143 (derate 4mW/°C above +70°C) ..... | 320mW           |
| Operating Temperature Range .....              | -40°C to +125°C |
| Junction Temperature .....                     | +150°C          |
| Storage Temperature Range .....                | -65°C to +150°C |
| Lead Temperature (soldering, 10s) .....        | +300°C          |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Electrical Characteristics

( $V_{CC}$  = full range,  $T_A = -40^\circ\text{C}$  to +125°C, unless otherwise noted. Typical values are at  $V_{CC} = +5.0V$  and  $T_A = +25^\circ\text{C}$ , reset not asserted.) (Note 1)

## Applications Information

### Manual-Reset Input

Many μP-based products require manual-reset capability, allowing the operator, a test technician, or external logic circuitry to initiate a reset. A logic low on  $\overline{\text{MR}}$  asserts reset. Reset remains asserted while  $\overline{\text{MR}}$  is low, and for the reset active timeout period after  $\overline{\text{MR}}$  returns high.  $\overline{\text{MR}}$  has an internal 20kΩ pullup resistor, so it can be left unconnected if not used. Connect a normally open momentary switch from  $\overline{\text{MR}}$  to GND to create a manual-reset function; external debounce circuitry is not required.

### Interfacing to μPs with Bidirectional Reset Pins

Since the  $\overline{\text{RESET}}$  output on the MAX6805 is open-drain, this device interfaces easily with μPs that have bidirectional reset pins, such as the Motorola 68HC11. Connecting the μP supervisor's  $\overline{\text{RESET}}$  output directly to the microcontroller's (μC's)  $\overline{\text{RESET}}$  pin with a single pullup resistor allows either device to assert reset (Figure 1).

### Negative-Going VCC Transients

In addition to issuing a reset to the μP during power-up, power-down, and brownout conditions, these devices are relatively immune to short-duration, negative-going VCC transients (glitches). The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Reset Comparator Overdrive graph. The graph

shows the maximum pulse width that a negative-going VCC transient may typically have without issuing a reset signal. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

### Ensuring a Valid Reset Output Down to VCC = 0

When VCC falls below 1V and approaches the minimum operating voltage of 0.7V, push/pull-structured reset sinking (or sourcing) capabilities decrease drastically. High-impedance CMOS-logic inputs connected to the RESET pin can drift to indeterminate voltages. This does not present a problem in most cases, since most

MAX6805

4-Pin, Low-Power  
 $\mu$ P Reset Circuits with Manual Reset

$\mu$ Ps and circuitry do not operate when  $V_{CC}$  drops below 1V. For the MAX6804 application where  $\overline{\text{RESET}}$  must be valid down to 0, adding a pulldown resistor between  $\overline{\text{RESET}}$  and GND removes stray leakage currents, holding  $\overline{\text{RESET}}$  low (Figure 2a). The pulldown resistor value is not critical;  $100\text{k}\Omega$  is large enough not to load  $\overline{\text{RESET}}$ , and small enough to pull it low. For the MAX6803, where RESET must be valid to  $V_{CC} = 0$ , a  $100\text{k}\Omega$  pullup resistor between RESET and  $V_{CC}$  will hold RESET high when  $V_{CC}$  falls below 0.7V (Figure 2b).

Since the MAX6805 has an open-drain, active-low out-put, it typically uses a pullup resistor. With this device,  $\overline{\text{RESET}}$  will most likely not maintain an active condition, but will drift to a non-active level due to the pullup resistor and the reduced sinking capability of the open-drain device. Therefore, this device is not recommended for applications where the  $\overline{\text{RESET}}$  pin is required to be valid down to  $V_{CC} = 0$ .

Figure 2. Ensuring Reset Valid down to  $V_{CC} = 0$

PROCESS: BiCMOS

### Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE<br>TYPE | PACKAGE<br>CODE | OUTLINE<br>NO.          | LAND<br>PATTERN NO.     |
|-----------------|-----------------|-------------------------|-------------------------|
| 4 SOT143        | U4-1            | <a href="#">21-0052</a> | <a href="#">90-0183</a> |

MAX6803/MAX6804/  
MAX6805

4-Pin, Low-Power  
μP Reset Circuits with Manual Reset

## Revision History

| REVISION<br>NUMBER | REVISION<br>DATE | DESCRIPTION                                                               | PAGES<br>CHANGED |
|--------------------|------------------|---------------------------------------------------------------------------|------------------|
| 3                  | 7/14             | No /V OPNs; removed Automotive reference from <i>Applications</i> section | 1                |

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at [www.maximintegrated.com](http://www.maximintegrated.com).

*Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.*

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.

#### Как с нами связаться

**Телефон:** 8 (812) 309 58 32 (многоканальный)

**Факс:** 8 (812) 320-02-42

**Электронная почта:** [org@eplast1.ru](mailto:org@eplast1.ru)

**Адрес:** 198099, г. Санкт-Петербург, ул. Калинина, дом 2, корпус 4, литера А.
