Product Description

The TriQuint TGA2522-SM is a three stage HPA MMIC design using TriQuint's proven 0.25 μm Power pHEMT process. The TGA2522-SM is designed to support a variety of millimeter wave applications including point-to-point digital radio and other K band linear gain applications.

The TGA2522-SM provides 26 dBm nominal output power at 1dB compression across 17-24 GHz. Typical small signal gain is 17 dB at 17 GHz and 18 dB at 24 GHz.

The TGA2522-SM requires minimum off-chip components. Each device is DC and RF tested for key parameters. The device is available in a 4 x 4 mm plastic QFN package.

RoHS and Lead-Free compliant. Evaluation boards available on request.

Assembly Notes

Recommended Surface Mount Package Assembly

- Proper ESD precautions must be followed while handling packages.
- Clean the board with acetone. Rinse with alcohol. Allow the circuit to fully dry.
- TriQuint recommends using a conductive solder paste for attachment. Follow solder paste and reflow oven vendors' recommendations when developing a solder reflow profile. Typical solder reflow profiles are listed in the table below.
- Hand soldering is not recommended. Solder paste can be applied using a stencil printer or dot placement. The volume of solder paste depends on PCB and component layout and should be well controlled to ensure consistent mechanical and electrical performance.
- Clean the assembly with alcohol.
