1 Open Circuit Inductance (OCL) Test Parameters: 100 kHz, 0.10 V_{rms}, 0.0 Adc

2 Full Load Inductance (FLL) Test Parameters: 100 kHz, 0.1 V_{rms}, I_{sat}1

3 I_{rms}: DC current for an approximate temperature rise of 40 °C without core loss. Derating

is necessary for AC currents. PCB pad layout, trace thickness and width, air-flow and proximity of other heat generating components will affect the temperature rise. It is recommended the part temperature not exceed +125 °C under worst case operating conditions verified in the end application.

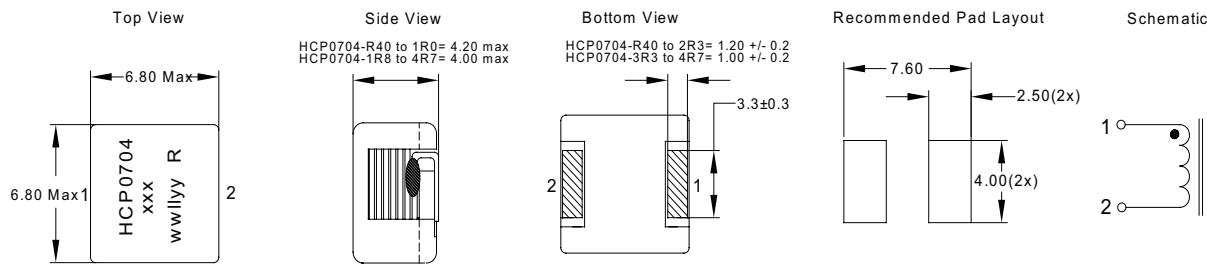

4 I_{sat}: Peak current for approximately 20% rolloff at +25 °C.

5 K-factor: Used to determine B_{p-p} for core loss (see graph). B_{p-p} = K * L * ΔI : (Gauss), K: (K-factor from table), L: (inductance in μH), ΔI (peak-to-peak ripple current in amps).

6 Part Number Definition: HCP0704-xxx-R

- HCP0704 = Product code and size
- xxx= Inductance value in μH, R = decimal point. If no "R" is present, then third character = # of zeros
- "-R" suffix = RoHS compliant

Dimensions (mm)

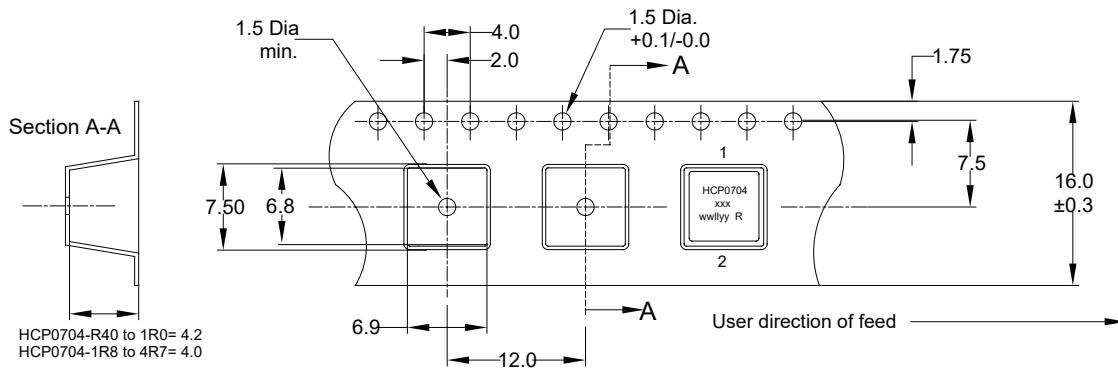

Part Marking: HCP0704 xxx = Inductance value in μH. (R = Decimal point). If no "R" is present, then last character is # of zeros wwlyy = Date code R = Revision level

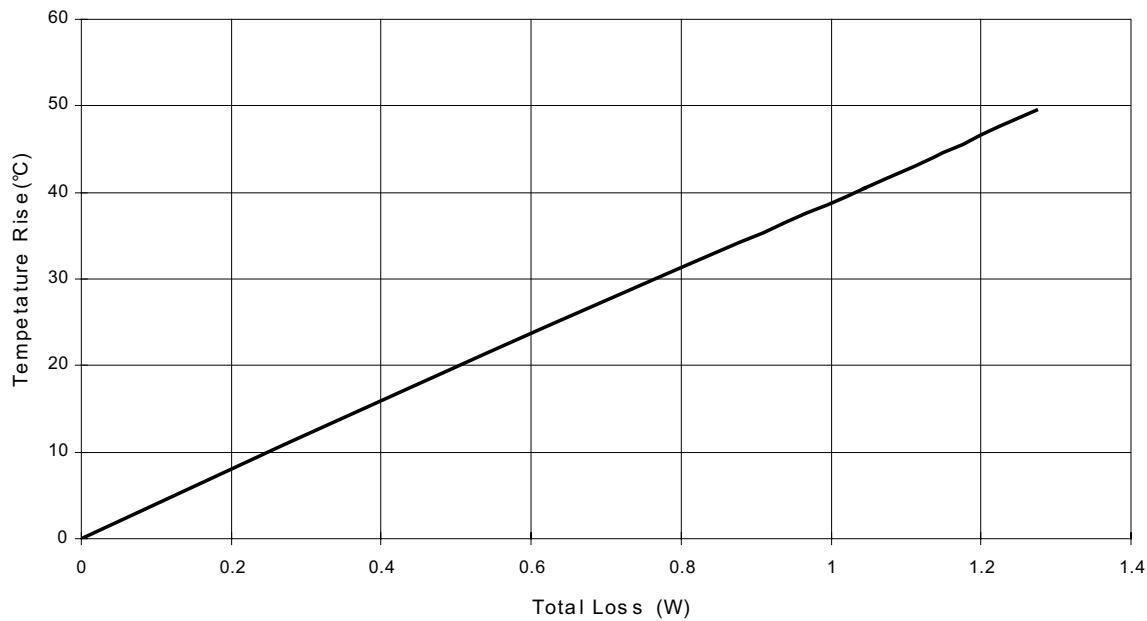

Do not route traces or vias underneath the inductor

Packaging information (mm)

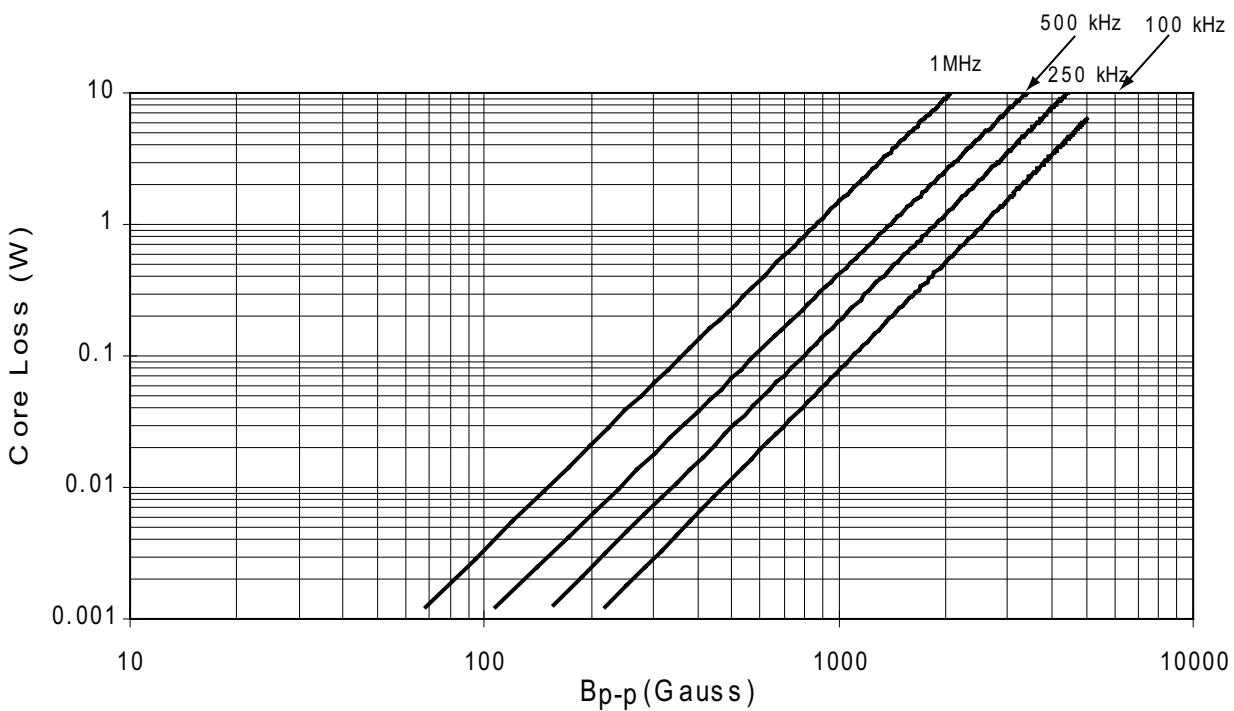

Supplied in tape and reel packaging, 1000 parts per 13" diameter reel.
