

## Description

Microsemi's PD69008 Power over Ethernet (PoE) Manager chip integrates power, analog and state of the art embedded core logic into a single 80-pin, plastic QFP package. The device is used in Ethernet switches and Midspans to enable network devices to share power and data over the same cable.

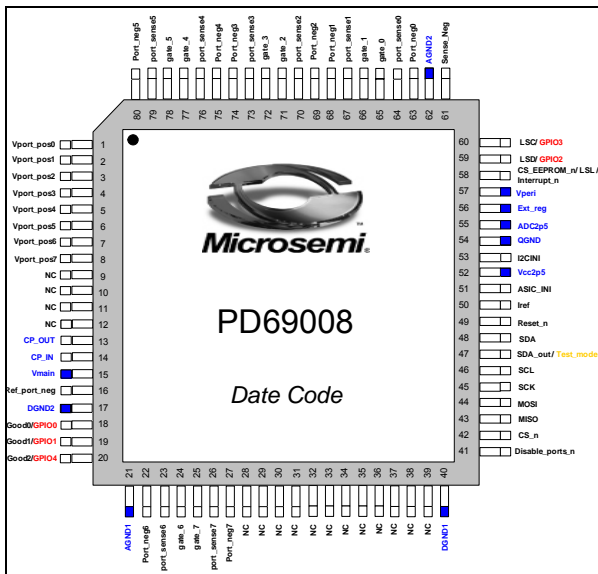

PD69008 device is an 8-port, mixed-signal, high-voltage Power over Ethernet driver. It enables detection of IEEE802.3af-2003 compliant PDs (Powered Devices) and IEEE802.3AT High Power Devices, thus, ensuring safe power feeding and disconnection of ports. With full digital control via a serial communication interface and a minimum of external components, the device integrates into multi-port and highly populated Ethernet switches and routers.

The PD69008 executes all real time functions as specified in the IEEE802.3af-2003 ("AF") standard and IEEE802.3at High Power ("AT") functionality, including load detection, "AF" and "AT" classification and port status monitoring. In addition it performs system level activities such as power management and MIB support for system management. The PoE device is designed to detect and disable disconnected ports, utilizing both DC and AC disconnection methods, as specified in the IEEE 802.3af-2003 standard.

The PD69008 is designed to support 2 main configurations:

- Auto mode: For Basic "AF" and "AT" PSE equipment
- Enhanced mode: For High End, Extended features set of AF and AT PSE equipment

## Pin Configuration

## Supported Features

### PD69008 Auto Mode features:

- ◆ Fully IEEE802.3af-2003 compliant
- ◆ Designed to support IEEE802.3at including two-event classification
- ◆ Supports pre-standard PD detection
- ◆ Supports Cisco devices detection
- ◆ IETF Power Ethernet MIB (RFC 3621) compliant
- ◆ Single DC voltage input (44v-57v)
- ◆ Wide temperature range: -40° C to +85° C
- ◆ Low thermal dissipation (0.5Ω sense resistor)
- ◆ Drives 8 independent two-pairs power ports or 64-pairs ports
- ◆ Can cascade up to 8 PoE devices (64 ports)
- ◆ EEPROM interface for software patching and parameter configuration
- ◆ I<sup>2</sup>C Host interface
- ◆ Supports Interrupt out pin
- ◆ Dynamic power management
- ◆ Emergency power management supporting three configurable Power Bank I/Os
- ◆ Direct register communication
- ◆ Direct LED drive supporting one or two colors
- ◆ Continuous monitoring per port and system data
- ◆ Parameter setting per port and per system
- ◆ Power soft start algorithm
- ◆ Thermal monitoring/protection
- ◆ Voltage monitoring/protection
- ◆ H/W disable ports input
- ◆ Built in 3.3 V regulator
- ◆ Internal power on reset
- ◆ Enhanced SPI bus for internal communication
- ◆ External EEPROM for system parameters update
- ◆ SW ROM patch option
- ◆ RoHS compliant

### Enhanced Modes Additional Features:

- ◆ I<sup>2</sup>C or UART Host interface
- ◆ Serial communication protocol backwards compatible with PD63000 and PDIC66000
- ◆ Added monitoring
- ◆ Extended parameters setting
- ◆ Port matrix for flexible PCB Layout
- ◆ Field upgradeable software
- ◆ Emergency Power Management with four power supplies

## Ordering Information

Part number	Temperature range	Package
PD69008	-40 to 85°C	LQFP 80 pin

This datasheet refers to ICs with date code "XAA0843" or later.

Date code: See the bottom line (XAA0843) in the Pin Configuration drawing. Where "0843" is the date code, "08" is the year (2008), and "43" is the week.

## Package Information

The PD69008 is packed in an 80-pin LQFP plastic package, 12 x 12 x 1.4 mm with exposed pad

NOTES:

1. DATUMS T, U AND Z TO BE DETERMINED WHERE THE LEADS EXIT THE PLASTIC BODY AT DATUM PLANE H.
2. DIMENSIONS D AND E DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25mm PER SIDE. DIMENSIONS D AND E ARE MAXIMUM PLASTIC BODY SIZE DIMENSIONS INCLUDING MOLD MISMATCH.
3. DIMENSION b DOES NOT INCLUDE DAM BAR PROTRUSION. ALLOWABLE DAM BAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED THE MAXIMUM b DIMENSION BY MORE THAN 0.08mm. DAM BAR CAN NOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT. MINIMUM SPACE BETWEEN A PROTRUSION AND AN ADJACENT LEAD IS 0.07mm.

△ EXACT SHAPE OF EACH CORNER IS OPTION.

### Dynamic Characteristics

The PD69008 utilizes three programmable current level thresholds ( $I_{min}$ ,  $I_{cut}$ ,  $I_{lim}$ ) and three timers ( $T_{min}$ ,  $T_{cut}$ ,  $T_{lim}$ ). Loads that dissipate more than  $I_{cut}$  for longer than  $T_{cut}$  are classified as 'overloads' and are automatically shutdown. Loads that consume  $I_{lim}$  current for more than  $T_{lim}$  are shutdown and classified as 'short circuit state'.

In cases where the PD69008 is configured to operate in DC-Disconnect mode, and the output current is below  $I_{min}$  for more than  $T_{min}$ , the PD is classified as 'no-load' and is shutdown. In cases where the PD69008 is configured to operate in AC-Disconnect mode, and the load's impedance is above a pre-defined impedance for more than  $T_{min}$ , the PD is classified as 'no-load' and is shutdown.

Automatic recovery from overload and no-load conditions is attempted every period of  $T_{OVLREC}$  and  $T_{UDLREC}$  (typically 5 and 1 seconds, respectively). Output power is limited to  $I_{lim}$ , which is a maximum peak current allowed at the port.

### AF Ports Parameters

PARAMETER	CONDITIONS		MIN.	TYP.	MAX.	UNIT

## Configuration Pins

There are two main configuration pins utilized in the PD69008 (as shown in Figure 3) which configure the operation mode of the chip and the communication addresses (SPI and I<sup>2</sup>C).

Figure 3: Electronic Connection of Configuration Pins

## Application information

The PD69008 can be integrated into a number of applications such as daughter boards, Ethernet switches or routers. Examples of such applications are described below:

Integrated directly into a switch: Facilitates entire PoE concept by including the IC(s) on the main switch's PCB.

Daughter board add-on: The IC is integrated into a small dedicated PoE PCB, mounted on top of the switch's main PCB or into a DIMM module.

Integrated into an RJ45 connector: Saves space on the main board and creates small differences between the PoE and non-PoE versions of a switch.

Midspans: Stand-alone devices, installed between the Ethernet switch and the PDs (Powered Devices) such as telephones, cameras, wireless LANs, etc.

These Midspans include the PD69008 IC as a PoE control element, destined to inject power over the communication lines.

Figure 4 and Figure 5 provide examples of basic applications of the PD69008 in an AC Disconnect Mode and the DC Disconnect Mode:
