

FEATURES

- Fixed gain of 20 dB**
- Operation from 50 MHz to 4.0 GHz**
- Highest dynamic range gain block**
- Input/output internally matched to 50 Ω**
- Integrated bias control circuit**
- OIP3 of 42.0 dBm at 2.0 GHz**
- P1dB of 19.3 dBm at 2.0 GHz**
- Noise figure of 3.3 dB at 2.0 GHz**
- Single 5 V power supply**
- Low quiescent current of 89 mA**
- Thermally efficient SOT-89 package**
- ESD rating of ± 1.5 kV (Class 1C)**

GENERAL DESCRIPTION

The ADL5602 is a broadband 20 dB linear amplifier that operates at frequencies up to 4 GHz. The device can be used in a wide variety of cellular, CATV, military, and instrumentation equipment.

The ADL5602 provides the highest dynamic range available from an internally matched gain block. This is accomplished by providing extremely low noise figures and very high OIP3 specifications simultaneously, across the entire 4 GHz frequency range.

The ADL5602 provides a gain of 20 dB, which is stable over frequency, temperature, power supply, and from device to device. The device is internally matched to 50 Ω at the input and output, making the ADL5602 very easy to implement in a wide variety of applications. Only input/output ac coupling capacitors, power supply decoupling capacitors, and an external inductor are required for operation.

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The ADL5602 is fabricated on an InGaP HBT process and has an ESD rating of ± 1.5 kV (Class 1C). The device is available in a thermally efficient SOT-89 package.

The ADL5602 consumes 89 mA on a single 5 V supply and is fully specified for operation from -40°C to $+85^{\circ}\text{C}$.

A fully populated RoHS-compliant evaluation board is available.

ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
Supply Voltage, V_{CC}	6.5 V
Input Power (re: 50 Ω)	16 dBm
Internal Power Dissipation (Paddle Soldered)	600 mW
θ_{JA} (Junction to Air)	30.7°C/W
θ_{JC} (Junction to Paddle)	5.0°C/W
Maximum Junction Temperature	150°C
Lead Temperature (Soldering, 60 sec)	240°C
Operating Temperature Range	−40°C to +85°C
Storage Temperature Range	−65°C to +150°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

ADL5602

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Table 4. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RFIN	RF Input. This pin requires a dc blocking capacitor.
2	GND	Ground. Connect this pin to a low impedance ground plane.
3	RFOUT	RF Output and Supply Voltage. DC bias is provided to this pin through an inductor that is connected to the external power supply. The RF path requires a dc blocking capacitor.
(2)	Exposed Paddle	Exposed Paddle. Internally connected to GND. Solder to a low impedance ground plane.

BASIC CONNECTIONS

The basic connections for operating the ADL5602 are shown in Figure 15. Recommended components are listed in Table 5. The input and output should be ac-coupled with appropriately sized capacitors (device characterization was performed with 0.1 μ F capacitors). A 5 V dc bias is supplied to the amplifier through the bias inductor connected to RFOUT (Pin 3). The bias voltage should be decoupled using a 1 μ F capacitor, a 1.2 nF capacitor, and a 68 pF capacitor.

Figure 15. Basic Connections

SOLDERING INFORMATION AND RECOMMENDED PCB LAND PATTERN

Figure 16 shows the recommended land pattern for the ADL5602. To minimize thermal impedance, the exposed paddle on the package underside should be soldered down to a ground plane along with Pin 2. If multiple ground layers exist, they should be stitched together using vias. For more information on land pattern design and layout, refer to AN-772 Application Note, *A Design and Manufacturing Guide for the Lead Frame Chip Scale Package (LFCSP)*.

Figure 16. Recommended Land Pattern

Table 5. Recommended Components for Basic Connections

Frequency (MHz)	C1	C2	L1	C4	C5	C6
50 to 4000	0.1 μ F	0.1 μ F	470 nH (Coilcraft 0603LS-NX or equivalent)	68 pF	1.2 nF	1 μ F

W-CDMA ACPR PERFORMANCE

Figure 17 shows a plot of adjacent channel power ratio (ACPR) vs. P_{OUT} for the ADL5602. The signal type being used is a single W-CDMA carrier (Test Model 1-64) at 2140 MHz. This signal is generated by a very low ACPR source. ACPR is measured at the output by a high dynamic range spectrum analyzer, which incorporates an instrument noise correction function.

The ADL5602 achieves an ACPR of -75 dBc at -5 dBm output, at which point device noise and not distortion is beginning to dominate the power in the adjacent channels. At an output power of $+5$ dBm, ACPR is still very low at -61 dBc, making the device particularly suitable for PA driver applications.

Figure 17. ACPR vs. P_{OUT} , Single Carrier W-CDMA (Test Model 1-64) at 2140 MHz Evaluation Board

EVALUATION BOARD

Figure 19 shows the schematic for the ADL5602 evaluation board. The board is powered by a single 5 V supply.

The components used on the board are listed in Table 6. Power can be applied to the board through clip-on leads (VCC and GND).

Figure 18. Evaluation Board Layout (Top)

Figure 19. Evaluation Board Schematic

Table 6. Evaluation Board Configuration Options

Component	Description	Default Value
C1, C2	AC-coupling capacitors	0.1 μ F, 0402
L1	DC bias inductor	470 nH, 0603 (Coilcraft 0603LS-NX or equivalent)
VCC and GND	Clip-on terminals for power supply	
C4, C5, C6	Power supply decoupling capacitors	C4 = 68 pF, 0603; C5 = 1.2 nF, 0603; C6 = 1 μ F, 1206

OUTLINE DIMENSIONS

*COMPLIANT TO JEDEC STANDARDS TO-243 WITH EXCEPTION TO DIMENSIONS INDICATED BY AN ASTERISK.

NOTES

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
