DESCRIPTION AND APPLICATIONS:

Bipolarics' B12V105 is a high performance silicon bipolar transistor intended for use in low noise application at VHF, UHF and microwave frequencies. High performance low noise performance can be realized at 2 mA or less making the B12V105 an excellent choice for battery applications. From 10 mA to greater than 25 mA, f_t is nominally 10 GHz. Maximum recommended continuous current is 40 mA. A broad range of packages are offered including SOT-23, SOT-143, plastic and ceramic 0.085" Micro-X, 0.070" Stripline and unencapsulated dice.
