## DESCRIPTION

The IS31FL3746A is a general purpose 18×n (n=1~4) LED Matrix programmed via 1MHz I2C compatible interface. Each LED can be dimmed individually with 8-bit PWM data and 8-bit DC scaling (Color Calibration) data which allowing 256 steps of linear PWM dimming and 256 steps of DC current adjustable level.

Additionally each LED open and short state can be detected, IS31FL3746A store the open or short information in Open-Short Registers. The Open-Short Registers allowing MCU to read out via I2C compatible interface. Inform MCU whether there are LEDs open or short and the locations of open or short LEDs.

## FEATURES

- Supply voltage range: 2.7V to 5.5V
- 18 current sinks
- Support 18×n (n=1~4) LED matrix configurations
- Individual 256 PWM control steps
- Individual 256 DC current steps
- Global 256 current steps
- SDB rising edge reset I2C module
- 29kHz PWM frequency
- 1MHz I2C-compatible interface
- State lookup registers
- Individual open and short error detect function
- De-Ghost
- QFN-32 (4mm×4mm) package

## QUICK START

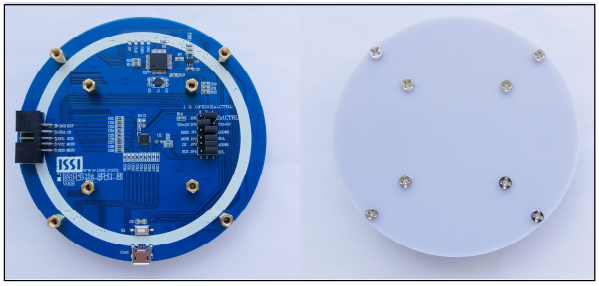

*Figure 1: Photo of IS31FL3746A Evaluation Board*

## RECOMMENDED EQUIPMENT

- 5.0V, 2A power supply

## ABSOLUTE MAXIMUM RATINGS

- ≤ 5.5V power supply

***Caution: Do not exceed the conditions listed above, otherwise the board will be damaged.***

## PROCEDURE

The IS31FL3746A evaluation board is fully assembled and tested. Follow the steps listed below to verify board operation.

***Caution: Do not turn on the power supply until all connections are completed.***

1) Connect Pin1 and Pin2 in JP6 to enable the control of board MCU (default status).
2) Connect Pin2 and Pin3 in JP5 to connect the VIO to 3V.
3) Connect Pin1 and Pin2 in JP1 (ADDR2) / JP2 (SDA) / JP3 (ADDR1) / JP4 (SCL).
4) Connect the 5VDC power to VCC/GND of TP4, or plug in the USB power input to micro-USB.
5) Turn on the power supply, pay attention to the supply current. If the current exceeds 1A, please check for circuit fault.

## EVALUATION BOARD OPERATION

The IS31FL3746A evaluation board has three display modes. Press K1 to switch configurations:

1) (Default mode) Colors breathe change.
2) Rainbow.
3) Half cycle colors change.

***Note: IS31FL3746A solely controls the FxLED function on the evaluation board.***

## ORDERING INFORMATION

| Part No. | Temperature Range | Package |
|---|---|---|
| IS31FL3746A-QFLS4-EB | -40℃ to +125℃, Industrial | QFN-32, Lead-free |

*Table 1: Ordering Information*

***For pricing, delivery, and ordering information, please contacts ISSI's analog marketing team at analog@issi.com or (408) 969-6600.***

## SOFTWARE SUPPORT

Pin1 and Pin2 of JP6 is default shorted. If the jumper is opened or move to Pin 2 and Pin 3, the on-board MCU will configure I2C pins and SDB pin to high impedance. External I2C and SDB signals can be connected to TP4 (Above ISSI Logo) to control the IS31FL3746A LED driver.

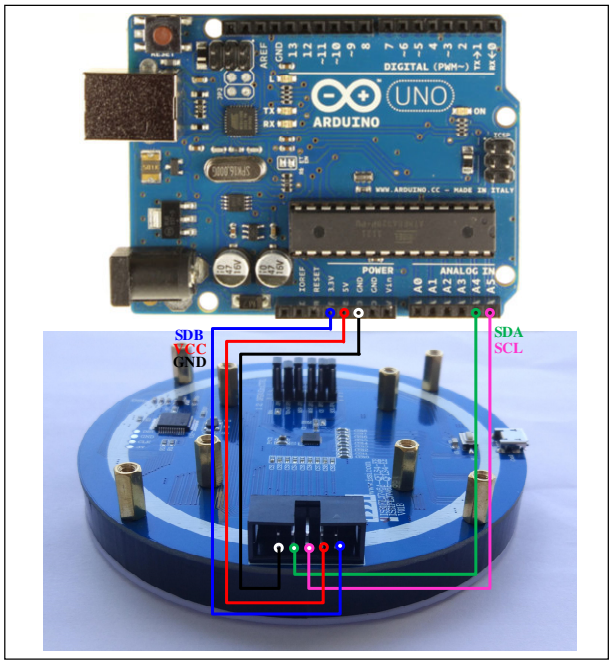

***Figure 2: Photo of Arduino UNO connected to Evaluation Board***

The steps listed below are an example using the Arduino for external control.

The Arduino hardware consists of an Atmel microcontroller with a bootloader allowing quick firmware updates. First download the latest Arduino Integrated Development Environment IDE (1.6.12 or greater) from www.arduino.cc/en/Main/Software. Also download the Wire.h library from www.arduino.cc/en/reference/wire and verify that pgmspace.h is in the directory …program Files(x86)/Arduino/hardware/tools/avr/avr/include/avr/. Then download the latest IS31FL3746A test firmware (sketch) from the ISSI website http://ams.issi.com/US/product-analog-fxled-driver.shtml.

1) Open JP6's jumper or move to Pin 2 and Pin 3(Pin 3 is floated).
2) Connect the 5 pins from Arduino board to TP4(Above ISSI Logo):
   a) Arduino GND to IS31FL3746A EVB GND.
   b) Arduino 3.3V pin to IS31FL3746A EVB SDB.
   c) Arduino SDA (A4) to IS31FL3746A EVB SCL.
   d) Arduino SCL (A5) to IS31FL3746A EVB SDA.
   e) If Arduino use 3.3V MCU VCC, connect 3.3V to IS31FL3746A EVB SDB, if Arduino use 5.0V MCU VCC, connect 5.0V to EVB SDB.
      (Arduino UNO VCC is 5.0V, so SDB=5.0V)
   f) Arduino 5V pin to IS31FL3746A EVB VCC.
3) Use the test code in appendix Ⅰ or download the test firmware (sketch) from the ISSI website, a .txt file and copy the code to Arduino IDE, compile and upload to Arduino.
4) Run the Arduino code and the initial mode will change the RGB LED colors.

***Please refer to the datasheet to get more information about IS31FL3746A.***

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
