MOUNTING INSTRUCTION

The $R_{thj-amb}$ of the TDA2822 can be reduced by soldering the GND pins to a suitable copper area of the printed circuit board (Figure 15) or to an external heatsink (Figure 16).

The diagram of Figure 17 shows the maximum dissippable power P_{tot} and the $R_{thj-amb}$ as a function of the side "a" of two equal square copper areas having a thickness of 35 μ (1.4 mils).

Figure 15 : Example of P.C. Board Copper Area which is used as Heatsink.

During soldering the pins temperature must not exceed 260 °C and the soldering time must not be longer than 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.
