

## DESCRIPTION

The MP2005 is a micropower, ultra low-dropout LDO linear regulator. It has a 1.0V to 5.5V input voltage range and can regulate the output voltage from as low as 0.5V. The MP2005 can supply up to 800mA of load current with a typical dropout voltage of 90mV. It requires a bias supply (2.7V to 5.5V) separate from  $V_{IN}$  to run the internal reference and LDO drive circuitry. The output current comes directly from the input voltage supply for high efficiency regulation. The 0.5V internal reference voltage allows the output to be programmed to a wide range of voltages (0.5V to 4V).

A low bias current of 100 $\mu$ A makes the MP2005 ideal for use in battery-powered applications. The bias supply  $V_{BIAS}$  can be directly applied from the battery while  $V_{IN}$  is powered from the high efficiency buck regulator (or other secondary supply). This reduces output noise and the size of the decoupling capacitor.

Other features of MP2005 include thermal overload and current limit protection, stability with ultra low ESR ceramic capacitors as low as 1 $\mu$ F, and fast transient response. The MP2005 is available in a 8-pin QFN (2mm x 3mm) package.

## FEATURES

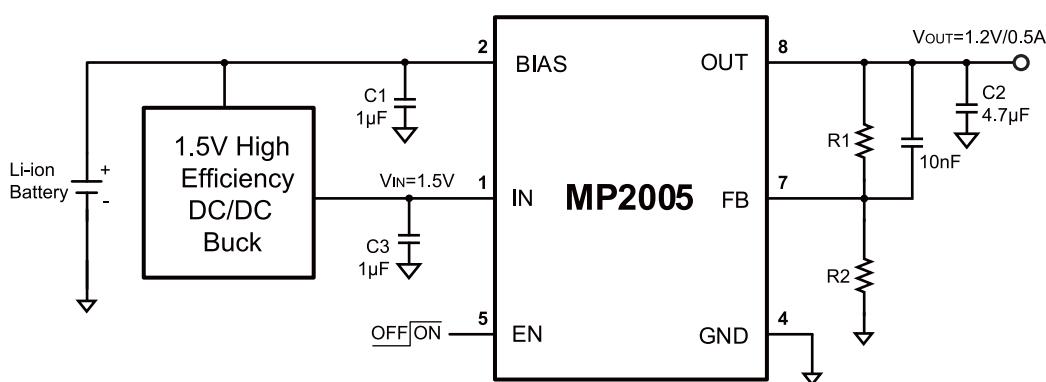

- Wide 1.0V to 5.5V Input Voltage Range
- Stable with 1 $\mu$ F Ceramic Capacitor
- Ultra-Low Dropout (ULDO) voltage: 90mV@800mA
- 2% Accurate Output Voltage
- Adjustable Output Range of 0.5V to 4V
- High PSRR
  - 65dB at 1KHz
  - 48dB at 1MHz
- Better Than 0.0005%/mA Load Regulation
- Stable With Low-ESR Output Capacitors
- Low 100 $\mu$ A Ground Current
- Internal Thermal Protection
- Current Limit Protection
- 1 $\mu$ A Typical Quiescent Current at Shutdown

## APPLICATIONS

- Low Current Regulators
- Low Power Handheld Devices
- Battery Powered Systems
- Cellular Phones
- Portable Electronic Equipment
- Post Regulation for Switching Power Supplies
- Power Supplies

## Notes:

- 1) Exceeding these ratings may damage the device.
- 2) The maximum allowable power dissipation is a function of the maximum junction temperature  $T_J(MAX)$ , the junction-to-ambient thermal resistance  $\theta_{JA}$ , and the ambient temperature  $T_A$ . The maximum allowable continuous power dissipation at any ambient temperature is calculated by  $P_D(MAX)=(T_J(MAX)-T_A)/\theta_{JA}$ . Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- 3) The device is not guaranteed to function outside of its operating conditions.
- 4) Measured on JESD51-7, 4-layer PCB.

## PIN FUNCTIONS

Pin #	Name	Description
1	IN	Power Source Input. Bypass IN to GND with a $1\mu F$ or greater capacitor.
2	BIAS	Bias Voltage. Bypass to GND with a $1\mu F$ capacitor (or greater)
3, 6	NC	No Connect.
4	GND	Ground.
5	EN	Enable Input. Drive EN high to turn on the MP2005, drive EN low to turn it off. For automatic startup, connect EN to Bias.
7	FB	Feedback Input. Connect a resistive voltage divider from OUT to FB to set the output voltage. OUT feedback threshold is 0.5V.
8	OUT	Regulator Output. OUT is the output of the linear regulator. Bypass OUT to GND with a $1\mu F$ or greater capacitor.

## APPLICATION INFORMATION

### Setting the Output Voltage

The MP2005 has an adjustable output voltage, set by using a resistive voltage divider from the output voltage to FB pin. The voltage divider divides the output voltage down to the feedback voltage by the ratio:

$$V_{FB} = V_{OUT} \frac{R2}{R1+R2}$$

Where  $V_{FB}$  is the feedback threshold voltage ( $V_{FB} = 0.5V$ ), and  $V_{OUT}$  is the output voltage.

Thus the output voltage is:

$$V_{OUT} = 0.5 \times \frac{R1+R2}{R2}$$

$R2$  can be as high as  $100k\Omega$ , but a typical value is  $10k\Omega$ . Using that value,  $R1$  is determined by:

$$R1 = R2 \times \left( \frac{V_{OUT} - V_{FB}}{V_{FB}} \right)$$

For example, for a 1.8V output voltage,  $R2$  is  $10k\Omega$ , and  $R1$  is  $26k\Omega$ . You can select a standard  $26k\Omega$  ( $\pm 1\%$ ) resistor for  $R1$ .

The following table lists the selected  $R1$  for various output voltages.

**Table 1—Adjustable Output Voltages R1 Values**

$V_{OUT}$ (V)	$R1$ ( $k\Omega$ )	$R2$ ( $k\Omega$ )
1.25	15	10
1.5	20	
1.8	26	
2	30	
2.5	40	
2.8	46	
3	50	
3.3	56	
4	70	

### Bias Input

The bias input is designed for low drop application. The bias pin must be at least 2.7V, and at least 1.5V higher than the output. If  $V_{IN}$  supply voltage meets these requirements, the bias pin can be tied to  $V_{IN}$ .

### Feed Forward Capacitor

For stability, it needs a  $10nF$  capacitor parallel with  $R1$ . The ceramic type capacitor, will provide the best performance.

## PCB Layout Guide

PCB layout is very important to achieve good regulation, ripple rejection, transient response and thermal performance. It is highly recommended to duplicate EVB layout for optimum performance.

If change is necessary, please follow these guidelines and take Figure 2 for reference.

- 1) Input and output bypass ceramic capacitors are suggested to be put close to the IN Pin and OUT Pin respectively.
- 2) Ensure all feedback connections are short and direct. Place the feedback resistors and compensation components as close to the chip as possible.
- 3) Connect IN, OUT and especially GND respectively to a large copper area to cool the chip to improve thermal performance and long-term reliability.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
