

SPRING-LOADED SOLDERLESS CONTACT

AlphaLink PC Board Connectors and Jumpers

BOARD-LEVEL SOLUTIONS FOR MISSION-CRITICAL APPLICATIONS

OCTOBER 2013

SERIES 171

AlphaLink

Discrete connectors and turnkey I/O to board flex and wire jumpers for high-performance applications—shielded, rugged, high-temperature, spring-loaded, solderless.

AlphaLink is an innovative high-performance printed circuit board connector built on .050" center-to-center contact spacing with spring-loaded board contacts and flex, wire, or solder cup terminations. Spring-loaded contacts interconnect directly to board pads and circuits to effect an ultra-low-profile and lightweight solution. Direct connection to the board eliminates a mating connector half and makes for easier and faster board preparation and masking. On the termination side, AlphaLink connectors are equipped with either PC tail, pre-terminated wire pigtailed, or solder cups for complete versatility in flex circuit or conventional wire termination. AlphaLink may be ordered as a discrete connector or in turnkey jumper configurations paired with Glenair I/O connectors, including Series 80 Mighty Mouse, Series 88 SuperFly, Series 79 Micro-Crimp™, Series 89 circular and rectangular Nanominiature, and our mil-qualified 83513 (MWDM) Micro-D connectors.

SERIES 171

AlphaLink SL

Board-level spring-loaded-contact connectors and turnkey flex jumpers

AlphaLink SL is a high-performance, solderless board-level connector technology developed by Glenair that significantly expands board-level interconnection options for users of mil-spec caliber connectors. Precision-machined and EMI shielded, these ultralightweight PC tail, solder cup, and/or pigtail equipped connectors are designed for high-reliability applications that require avionic system levels of vibration and shock tolerance. Ultra low-profile and high-density, AlphaLink SL connectors are equipped with 2–3 Amp spring-loaded contacts and may be ordered either as discrete connectors or in turnkey flex jumpers that combine popular Glenair high-reliability I/O connectors. Glenair is perfectly positioned to provide the entire solution with in-house manufacturing for every component part—from connectors and contacts to rugged polyimide-based flex. AlphaLink SL flex jumpers are available with Series 80 Mighty Mouse, Series 88 SuperFly, and Series 89 nanominiature circular connectors, as well as Series 89 nanominiature, Micro-D subminiature and Series 79 Micro-Crimp rectangular connectors. A wide range of insert arrangements, from 4–40 contacts is available.

ALPHALINK ADVANTAGES

- **Spring-loaded, solderless board-level connector solution**
- **PC tail and solder cup versions offer easy termination to flex or wire**
- **Available turnkey I/O to board flex and pigtail wire jumpers**
- **Lightweight and low-profile—up to 40% space savings compared to 2mm pitch solutions**
- **High-density .050" center-to-center contact footprint**
- **Fast and easy PC board integration with reduced board preparation and masking**
- **Withstands temperature, vibration and shock extremes**

Flex offers many advantages over conventional wire, including reduced size, weight, and complexity

SERIES 171 ALPHALINK® SL

Spring-loaded board level connector

Design features

AlphaLink® SL Spring-Loaded Contact Interface

171-134-01 Solder Cup Termination

171-134-03 Wire Pigtail Termination

171-134-02 PC Tail Termination

AlphaLink® SL flex jumpers: Compact interconnect assemblies that combine circuit board technology and cabling into a lightweight, integrated package. These turnkey jumper assemblies reduce system size and weight and are ideally suited for prototype applications and new product development efforts.

AlphaLink® SL spring-loaded contact PC board connectors deliver up to 50% footprint savings versus conventional 2mm pitch solutions. PC tail equipped connectors, the 171-134-02, are supplied with an EMI shroud / shield for improved EMC compared to low-cost plastic board connectors. All connector styles incorporate a high-reliability spring-loaded contact that delivers a virtually unlimited number of mating cycles. Connectors are typically mated to the PC board using conductive pads or via's. Stainless steel mounting hardware provides a robust, vibration-resistant attachment solution compared to stamped-and-formed retention barb.

ALPHALINK® SPRING LOADED CONTACT CONNECTORS TECHNICAL SPECIFICATIONS

Modular contacts set on .050" centers, supplied in double-row contact arrangements. Precision-machined piston / base and gold-plated components assure a 1,000 minimum cycle life. Pistons have a .0275" mid stroke (when fully mated to PC board with a 60 gram/contact force.) Low resistance, high current contacts are rated at 2 amps continuous 3 amps peak. High temperature thermoplastic insulators are suitable for surface mount processes. Contact strips are designed for manual placement into $\varnothing.023 \pm .003$ " Plated thru-holes in the circuit board. Recommended for board thicknesses of .062" or greater.

Materials

Contact piston and base: machined Copper Alloy plated 20 micro inches Gold over 100 micro inches Nickel.
Spring: Beryllium Copper plated 10 micro inches Gold.
Insulator: high temp. thermoplastic rated UL94 V-0
Shell: Aluminum Alloy

Shell Finishes

Plating Code 2 = Electroless Nickel (Glenair M code, AMS-C-26074, Class 4 Grade B; ASTM-B-733, SC2, Type IV)
Plating Code 5 = Gold (Glenair code Z2, MIL-DTL-45204, Class 1 over Electroless Nickel)

Electrical

Voltage rating: 100vrms/150vdc
Current rating: 2A (continuous), 3A (peak) per contact.
Contact resistance: 20 milliohms maximum.
Insulation resistance: 5,000 megohms minimum.
Dielectric strength: 700 vrms minimum.
Capacitance: 1 pf maximum.

Mechanical

Spring force at initial height (a): 25 grams
Spring force at mid stroke (b/2): 60 grams
Durability: 1,000 cycles
Vibration sensitivity: 1.52mm DA or 20g. Duration 4h (in ea. Of 3 axis) per EIA-364-28D
Shock severity: 100g for 6ms per EIA-364-27B
Operational temperature: -65°C to +150°C

SERIES 171

AlphaLink SL Flex Jumpers

The easiest and fastest way to incorporate flexible circuit cabling in your high-performance application

Glenair AlphaLink SL I/O-to-board jumper assemblies are cataloged according to I/O connector type. Glenair currently offers six families of AlphaLink jumpers for Series 801 and 804 Mighty Mouse, Series 79 Micro-Crimp, MIL-DTL-83513 Micro-D, Series 89 Nanominiature circular and rectangular, and our nanominiature Series 88 SuperFly. Flex-to-board solutions available in each family are designed to optimize weight and package size reduction as well as maintain electrical performance equivalent with I/O connector performance*.

* Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

Easy-to-Order,
Ready-to-Use

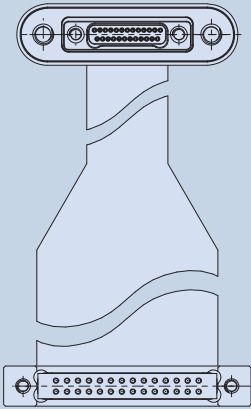

- Solderless connection allows fast yet rugged PC board mating
- Easy ordering of high-performance I/O connector-to-board flex jumpers
- Chemically etched, copper-clad polyimide flex circuits offer excellent temperature tolerance, dimensional stability, and reduced size and weight
- Designed for optimal electrical performance, including matched-impedance applications
- Ideal for rapid prototyping
- Superior electrical and mechanical performance compared to other cabling options
- A high-availability, fast-turn catalog solution

AlphaLink SL flex jumpers selection guide

Circular connector family selection guide

Nano Circular Section C	Series 88 SuperFly Section D	Series 80 Mighty Mouse Section E
		
<p>Glenair Series 89 Circular Nanominiature connectors with breakaway or threaded coupling in 6 contact arrangements, terminated with rugged polyimide-based flex to high-performance AlphaLink SL board level connectors.</p>	<p>Glenair Series 88 SuperFly connectors with quick-disconnect or threaded coupling in 7 contact arrangements, terminated with rugged polyimide-based flex to high-performance AlphaLink SL board level connectors.</p>	<p>Glenair Series 801 double-start ACME thread and Series 804 quick-disconnect Mighty Mouse receptacles in 8 contact arrangements terminated with rugged polyimide-based flex to high-performance AlphaLink SL board level connectors.</p>

893-012

SERIES 89 CIRCULAR NANOMINIATURE INPUT/OUTPUT (I/O) BREAKAWAY RECEPTACLE TO ALPHALINK SL SPRING LOADED CONTACT BOARD LEVEL (B/L) CONNECTOR

How To Order 893-012	
Sample Part Number	893-012 -19 N A2 -20 2 T -12 S
Series / Basic Part No.	Series 89 Circular Nanominiature Breakaway I/O receptacle to Series 171 AlphaLink SL
I/O Contact Arrangement	See Table I
I/O Polarization	N = Normal A = Alternate
I/O Shell and Spanner Nut Material and Finish	A2 = Aluminum / Electroless Nickel A5 = Aluminum / Gold over Nickel S1 = Stainless Steel / Zinc Cobalt (Black) S2 = Stainless Steel / Passivated
AlphaLink Layout	See Table II
AlphaLink Finish	2 = Nickel 5 = Gold
AlphaLink Hardware Option	Omit for .080+/- clearance hole in body, #0-80 UNF-2B threaded thru hole T = #0-80 UNF-2B Threaded Thru in Body, Contersink Clearance Hole in Cover
Assembly Length (L)	3 = 3.00 ± .05 inches 6 = 6.00 ± .05 inches 12 = 12.00 ± .05 inches
Optional Shielding	S = With shielding Omit for none

MATERIALS AND FINISHES

B/L connector shell: Aluminum alloy.
 I/O shell, jam nut: See P/N development
 I/O Insulator: LCP
 I/O O-ring: Fluorosilicone
 I/O Contacts: Gold Alloy per ASTM B477 and ASTM B541
 B/L Insulator: High Temp Thermoplastic
 B/L Contact: Copper Alloy/Gold Plated

NOTES

Input/Output Series 89 Nanominiature breakaway receptacle performance IAW MIL-DTL-32139
 As a minimum, assembly identified with date code, and Pin 1 identifier. Bag and tag with Glenair part number, CAGE code, and date code.
 Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

Unused Cavities in I/O panel mount connector to be populated with contacts.

B/L AlphaLink SL interface dimensions IAW Glenair drawing 171-134-02. Interface shown for reference.

Unused cavities in B/L connector to be populated with contacts.

Flex Performance:

Shielding - EMI shielding film will be used when shielding option is chosen

Bend radius is 6 to 10 times the flex thickness.

Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.

Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)

Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

Unused cavities in B/L connector to be populated with contacts.

Flex Performance:

Shielding - EMI shielding film will be used when shielding option is chosen

Bend radius is 6 to 10 times the flex thickness.

Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.

Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)

Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

Circular Nanominiature threaded coupling rear-panel-mount receptacle connector to AlphaLink SL flex jumper

SuperFly to AlphaLink flex jumper

Superfly to AlphaLink Flex Jumpers

Glenair Series 88 SuperFly™ Cordsets represent a perfect storm of high-performance contacts, shells, wires, termination and mating technologies. SuperFly™ combines the weight-saving and performance advantages of nanominiature contacts in a precision package made to order for battlefield and other high-performance applications. Now available in turnkey flex jumper format for easy integration in printed circuit board applications, each SuperFly jumper ships with rugged Polyimide-based flex terminated to your choice of threaded or quick disconnect coupling SuperFly and an AlphaLink SL board level connector.

MATERIALS AND FINISHES

B/L connector shell: Aluminum alloy. I/O shell, jam nut: See Table I
 Insulator: Liquid crystal polymer or equivalent
 Seals, grommet, O-ring: Fluorosilicone or equivalent
 Contacts: Copper Alloy/Gold Plated
 Potting: Epoxy

NOTES

Input/Output Series 88 SuperFly quick-disconnect receptacle:
 I/O connector will mate with all plug QDC SuperFly connectors with same polarization and opposite insert configuration.
 Insert arrangement per 889-001. See page 16 and 17, Table III for available arrangements. Unshrouded configurations are opposite of shrouded.
 Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.
 See 880-032 for other connector dimensions

Board Level AlphaLink SL connector:

B/L AlphaLink SL connectors are built in accordance with Glenair drawing 171-134-02

B/L connectors are paired with I/O connectors as shown on Table III

Flex Performance:

Shielding - EMI shielding film.

Bend radius is 6 to 10 times the flex thickness.

Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.

Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)

Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

Rectangular Nano to AlphaLink flex jumper

Rectangular Nano to AlphaLink Flex Jumpers

Glenair Series 89 Rectangular Nanominiature connectors available in 6 contact arrangements, terminated with rugged polyimide-based flex to AlphaLink board level connectors.

Recommended Rectangular Nano I/O to AlphaLink Contact Arrangements*

* These are recommended contact arrangements only, but do offer best availability. Contacts are mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

To optimize the 40-contact AlphaLink board level connector, 40 contacts of a 51-contact size Nano connector can be used.

Rectangular Nanominiature rear-panel-mount connectors to AlphaLink SL flex jumper

891-041 • How to order

SERIES 89 RECTANGULAR NANOMINIATURE INPUT/OUTPUT (I/O) REAR PANEL MOUNT CONNECTORS TO ALPHALINK SL SPRING LOADED CONTACT BOARD LEVEL (B/L) CONNECTOR

How To Order 891-041										
Sample Part Number	891-041	-19	P	S	01	-28	2	T	-12	S
Series / Basic Part No.	Series 89 Rectangular Nanominiature rear panel mount V/PTH to Series 171 AlphaLink SL									
I/O Contact Arrangement	See Table I									
Contact Type	P = Plug (See Table I) S = Receptacle (See Table III)									
I/O Shell Material and Finish	S = Stainless Steel, Passivated T = Titanium, Unplated									
I/O Gasket Material	Omit for no Gasket 01 = Fluorosilicone IAW MIL-DTL-25988, Type II, Class I, Grade 70 02 = Passivated Silver-Plated Aluminum filled Fluorosilicone IAW MIL-DTL-83528, Type "D" (CHO-Seal 1298 or equivalent)									
AlphaLink Layout	See Table II									
AlphaLink Finish	2 = Nickel 5 = Gold									
AlphaLink Hardware Option	T = Threaded thru hole Omit for thru hole									
Assembly Length (L)	3 = 3.00 ± .05 inches 6 = 6.00 ± .05 inches 12 = 12.00 ± .05 inches									
Optional Shielding	S = With shielding Omit for none									

MATERIALS AND FINISHES

B/L connector shell: Aluminum alloy.
 I/O shell: See P/N development
 I/O Insulator: LCP
 I/O Gasket: Fluorosilicone
 I/O Contacts: Gold Alloy per ASTM B477 and ASTM B541
 B/L Insulator: High Temp Thermoplastic
 B/L Contact: Copper Alloy/Gold Plated

NOTES

Input/Output Series 89 Nanominiature connector performance IAW MIL-DTL-32139
 As a minimum, assembly identified with date code, and Pin 1 identifier. Bag and tag with Glenair part number, CAGE code, and date code.
 Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

Unused Cavities in I/O panel mount connector to be populated with contacts.

B/L AlphaLink SL interface dimensions IAW Glenair drawing 171-134-02. Interface shown for reference.

Unused cavities in B/L connector to be populated with contacts.

Flex Performance:

Shielding - EMI shielding film will be used when shielding option is chosen

Bend radius is 6 to 10 times the flex thickness.

Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.

Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)

Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

Rectangular Nanominiature rear-panel-mount plug to AlphaLink SL flex jumper

Micro-D to AlphaLink flex jumper

Micro-D to AlphaLink Flex Jumpers

High-reliability Micro-D MIL-DTL-83513 type rectangular connectors in 7 contact arrangements, terminated with rugged polyimide-based flex to high-performance AlphaLink SL board level connectors.

Recommended Micro-D I/O to AlphaLink Contact Arrangements*

To optimize the 40-contact AlphaLink board level connector, 40 contacts of a 51-contact size Micro-D connector can be used.

* These are recommended contact arrangements only, but do offer best availability. Contacts are mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

1	Aluminum Alloy-Cadmium
2	Aluminum Alloy-Electroless Nickel
3	Stainless Steel-Pasivated
5	Aluminum Alloy-Gold
33	Aluminum Alloy-Ni/Pfte

MATERIALS AND FINISHES

B/L connector shell: Aluminum alloy. I/O shell: See Table I
 Insulator: High-grade rigid dielectric
 Socket interfacial seal: Fluorosilicone
 Contacts: Copper Alloy/Gold Plated
 Potting: Epoxy
 Hardware: Stainless steel/passivated

NOTES

Input/Output Micro-D rectangular environmental connector:
 I/O connector designed to meet the performance requirements of MIL-DTL-83513 (MWDM series)
 I/O interface dimensions IAW MIL-DTL-83513
 Unused cavities in I/O connector to be populated with contacts IAW MIL-DTL-83513
 Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

Board Level AlphaLink SL connector:

B/L AlphaLink SL connectors are built in accordance with Glenair drawing 171-134-02
 B/L connectors are paired with I/O connectors as shown in Contact Arrangements diagram, page 32

Flex Performance:

Shielding - EMI shielding film.
 Bend radius is 6 to 10 times the flex thickness.
 Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.
 Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)
 Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

HiPer-D socket connector to AlphaLink® SL flex jumper

286-078S

HIPER-D (I/O) SOCKET CONNECTOR TO ALPHALINK® SL SPRING LOADED CONTACT BOARD LEVEL (B/L) CONNECTOR

How To Order 286-078S	
Sample Part Number	286-078S -3S25 ME N -2 T -6 S
Series / Basic Part No.	HiPer-D socket connector to Series 171 AlphaLink® SL
I/O Insert Arrangement	See Table II
I/O Material / Finish	ME = Electroless Nickel over Aluminum Z1 = Passivated Stainless ZM = Electroless Nickel over Stainless JF = Yellow Chromate over Cadmium
I/O Hardware Option	N = None (Tapped Hole) P = Female Jackpost G = Guide Pin B = Guide Bushing
AlphaLink® Finish	2 = Nickel 5 = Gold
AlphaLink® Hardware Option	T = Threaded thru hole Omit for thru hole
Assembly Length	3 = 3.00 ± .05 inches 6 = 6.00 ± .05 inches 12 = 12.00 ± .05 inches
Optional Shielding	S = With shielding Omit for none

NOTES

Input/Output Series 28 HiPer-D connector:

- Right-angle socket-contact connector, rear panel mount with o-ring environmental seal.
- Refer to Glenair drawing 280-025 for materials, finishes, and performance specifications.
- Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.

Board Level AlphaLink® SL connector:

- B/L AlphaLink® SL connectors are built in accordance with Glenair drawing 171-134-02

Flex Performance:

- Shielding - EMI shielding film.
- Bend radius is 6 to 10 times the flex thickness.
- Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.
- Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)
- Workmanship shall be IAW IPC-6013, Class 2.
- Consult factory for more options and/or special designs and requirements

Rear panel mount environmental Micro-Crimp pin contact receptacle to AlphaLink SL flex jumper

796-112

SERIES 79 MICRO-CRIMP INPUT/OUTPUT (I/O) RECEPTACLE CONNECTOR WITH PIN CONTACTS TO ALPHALINK SL SPRING-LOADED CONTACT BOARD LEVEL (B/L) CONNECTOR

How To Order 796-112	
Sample Part Number	796-112 -9-10 M G -2 T -6 S
Series / Basic Part No.	Rear Panel-Mount Micro-Crimp I/O receptacle to Series 171 AlphaLink SL
I/O Contact Arrangement	See Table II
I/O Shell Finish	Aluminum Shell M - Electroless Nickel MT - Nickel-PTFE E - Chem Film Z2 - Gold UC - Zinc Cobalt with Black Chromate J - Cadmium with Yellow Chromate NF - Cad/O.D. over Electroless Nickel
I/O Hardware Option	P - Jackposts G - Male Guide Pins S - Female Guide Sockets N - No Mating Hardware (See Table I)
AlphaLink Finish	2 = Nickel 5 = Gold
AlphaLink Hardware Option	T = Threaded thru hole Omit for thru hole
Assembly Length	3 = 3.00 ± .05 inches 6 = 6.00 ± .05 inches 12 = 12.00 ± .05 inches
Optional Shielding	S = With shielding Omit for none

MATERIALS AND FINISHES

Shell: Aluminum alloy
 Insulators: Liquid crystal polymer
 Interfacial seal: Fluorosilicone
 Contacts: Copper Alloy/Gold Plated
 Potting: Epoxy
 Hardware: 300 series stainless steel

NOTES

Input/Output Series 79 Micro-Crimp connector:
 Receptacle connector with pin contacts, rear panel mount with o-ring environmental seal
 Refer to Glenair drawing 799-009 for insert arrangements
 Contacts mapped 1-to-1 from I/O to B/L connector (unused B/L contacts not connected). For alternative wire schedules, please consult factory.
 Refer to Glenair drawing 799-008 for materials, finishes and performance specifications
 Refer to Glenair drawing 799-005 for panel cutouts
 Blind mate ± .030 (0.76) allowable misalignment from centerline.

Board Level AlphaLink SL connector:

B/L AlphaLink SL connectors are built in accordance with Glenair drawing 171-134-02
 B/L connectors are paired with I/O connectors as shown in Contact Arrangements diagram, page 36

Flex Performance:

Shielding - EMI shielding film.
 Bend radius is 6 to 10 times the flex thickness.
 Typical flex will be .01 ± .005 thick, rugged, potted, polyimide-based flex.
 Flex cables are terminated from the I/O connector to the B/L connector on a 1 to 1 connection (unused B/L contacts are not connected)
 Workmanship shall be IAW IPC-6013, Class 2.

Consult factory for more options and/or special designs and requirements

SERIES M22759

Data transmission wire

AS22759 qualified single-ended transmission wire for termination of AlphaLink SL solder-cup connectors

Glenair stocks a full range of AS22759 qualified wire and cable. M22759/11 is a general-purpose, high-temperature range silver-coated copper wire with extruded TFE insulation. M22759/33 is our small diameter high-flex silver-coated copper wire with crosslinked modified ETFE insulation. Both are offered in #24 AWG, optimized for termination to AlphaLink 171-134-01 solder-cup spring-loaded board level connectors.

Part Number	Wire Size (AWG)	Stranding (Number of strands x AWG gage of strands)	Diameter of stranded conductor (inches)		Finished Wire		
			min	max	Resistance at 20° C (68° F) (Ohms/ 1000 ft) max	Diameter (inches)	Weight (lbs/ 1000 ft) max
M22759/11-24-*	24	19 x 36	.023	.025	24.3	.043 ± .002	2.58
M22759/33-24-*	24	19 x 36	.023	.025	28.4	.037 ± .002	2.0

NOTES

Cable identified with manufacturer's name and part number.
Cable is sold in 1 foot increments. Specify desired length on purchase order.

Glenair offers a full range of high-performance wire and cable, designed and manufactured for optimal performance in mission-critical applications—with no dollar or length order minimums.

Mil-spec data transmission wire

Airframe non-impedance-matched data transmission cable for termination of AlphaLink SL solder-cup connectors

M22759/11 SILVER-COATED COPPER WIRE WITH EXTRUDED TFE INSULATION: GENERAL PURPOSE, HIGH-TEMPERATURE RANGE WIRE FOR USE WITH ALPHALINK SL 171-134-01

M22759/33 SILVER-COATED COPPER WIRE WITH CROSSLINKED, MODIFIED ETFE INSULATION: SMALL DIAMETER, HIGH-FLEX WIRE FOR USE WITH ALPHALINK SL 171-134-01

Custom micro and nanominiature flex solutions

Build-to-print interconnect assemblies that combine circuit board technology and cabling into a lightweight, integrated package.

Glenair turnkey design, termination and assembly services available worldwide.

For more information contact Glenair at 818-247-6000 or visit our website at www.glenair.com

Flex circuit assemblies for mission-critical applications

Four reasons to specify flex in your next application

1 Unsurpassed Experience in Micro/Nano Flex Circuit Assembly

Glenair has been integrating Micro-D and Nanominiature connectors into flex circuitry for over 30 years. Our technical capabilities include design and layout of turnkey assemblies as well as the production of custom-configured micro and nano interconnects for maximum size and weight savings.

2 Full Spectrum Product Offering

Glenair offers a complete range of miniaturized printed circuit board connectors with high-reliability TwistPin contacts. We supply both through-hole and surface mount designs in every angle and mounting style for integration into single-sided, double-sided and multilayered flex circuitry.

3 Application Design

Our turnkey Micro-D and Nanominiature flex circuit assemblies are produced to exacting specifications.

Customer-supplied concepts and designs are reviewed and revised to ensure the most advantageous utilization of EMI shielding, polarization, strain-relief and connector packaging technologies. At Glenair, the final design solution is optimized to meet the exact mechanical and electronic requirements of the target environment.

4 Termination Expertise

Glenair's experienced workforce is trained and qualified to produce consistently reliable circuit terminations using the most advanced techniques and technologies, including automated solder reflow systems.

Lightweight and Versatile Flex Circuitry

Connector qualifications and design expertise help make Glenair the world's premier high-reliability flex circuitry termination/assembly facility

Flex circuitry combines ordinary printed circuit board technology and wiring into a single, integrated package. Glenair offers unsurpassed experience and expertise in flex circuit integration and termination for mission-critical applications. Our Mansfield, England and Glendale, California cable shops have been integrating Glenair manufactured connectors into flex circuitry for over 30 years. Our technical capabilities include valuable design and layout experience with custom rigid and multilayered flex assemblies and the ability to terminate the assemblies to Glenair's broad range of miniaturized rectangular and circular connectors, including qualified MIL-DTL-83513 and MIL-DTL-32139 products. The benefits of a Glenair produced "flexi" compared to discrete wiring solutions include:

Unsurpassed size and weight reduction

A single, integrated, multi-branch flex circuit assembly is orders of magnitude smaller and lighter than an equivalent ribbon cable or discrete wire harness. Well-conceived flex circuit designs can efficiently replace bulkier hard printed circuit boards, heavier

cable runs, and hard-to-manage loose connectors and accessories. The ability to exactly shape the flex circuit to take advantage of the limited space in densely packaged electronic enclosures, such the seeker housing in an air-to-ground missile, results in unequalled size and weight savings.

Outstanding mechanical performance

Flex circuitry is extremely durable and capable of withstanding high levels of vibration, shock, and other forms of mechanical stress. The custom nature of flex circuitry designs allows for the incorporation of stiffeners as well as localized bonding and termination to standard boards. Flex circuitry is by design extremely thin, flexible, lightweight and low mass, which directly reduces the impact on solder joints

and other physical points of contact within the equipment enclosure. Users of flex circuitry expect and receive extremely long duty cycles, vibration resistance, as well as long-term performance and high durability. The fixed shape of the flex circuit assembly delivers reliable and repeatable installation with proven resistance to vibration-related wear cycles—making flex circuitry ideally suited for use in aircraft avionics, and other electronic packages which are subject to severe physical stress.

Convenient packaging and integration

Flex circuit assemblies are ideally suited for space-constrained electronic packages and enclosures, or for interconnect systems that are required to flex in 3 axes during normal use. Flex circuitry offers complete design freedom to configure boards and wiring according to the unique packaging and space constraints of even the most densely-packed electronic enclosures. In mission-critical applications such as tactical command, control and communication technologies, the ability to reduce or even eliminate discrete wiring and boards in favor of hybrid flex circuitry helps designers make the most efficient use of available space.

Reliable resistance to Harsh environments

All forms of flex and rigid flex circuitry are encapsulated in polyimide materials that deliver outstanding protection of conductors. This unique dielectric material is ideally suited for interconnect applications that must perform in even the harshest application environments. The standards for resistance to temperature extremes, repetitive flex cycles, exposure to caustic chemicals, and UV radiation are defined in military specifications which include MIL-PRF-31032/3A and MIL-PRF-31032/4A. Other specifications adhered to by flex manufacturers used by Glenair include IPC standards that regulate base materials, dielectrics, adhesives and other key materials.

Why Choose **GLENAIR?**

Plenty of Raw Materials!

Outstanding
Customer Service!

Abundant Machining Capacity!

In-House Assembly!

Huge "Same-Day" Inventory!

One of North America's
and Machining

High-Production Injection Molding Equipment

State-of-the-Art Plating Capabilities

The Industry's Most Experienced EMI/RFI Braided Shielding Specialists

Largest CNC Milling Installations

Clean Rooms for Filter Array and Printed Circuit Board Assembly

Out of This World

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
