

## 256K SPI Bus Low-Power Serial SRAM

### Device Selection Table

| Part Number | Vcc Range | Page Size | Temp. Ranges | Packages  |
|-------------|-----------|-----------|--------------|-----------|
| 23K256      | 2.7-3.6V  | 32 Byte   | I, E         | P, SN, ST |
| 23A256      | 1.5-1.95V | 32 Byte   | I            | P, SN, ST |

### Features:

- Max. Clock 20 MHz
- Low-Power CMOS Technology:
  - Read Current: 3 mA at 1 MHz
  - Standby Current: 4  $\mu$ A Max. at +85°C
- 32,768 x 8-bit Organization
- 32-Byte Page
- $\overline{\text{HOLD}}$  pin
- Flexible Operating modes:
  - Byte read and write
  - Page mode (32 Byte Page)
  - Sequential mode
- Sequential Read/Write
- High Reliability
- Temperature Ranges Supported:
  - Industrial (I): -40°C to +85°C
  - Automotive (E): -40°C to +125°C
- Pb-Free and RoHS Compliant, Halogen Free

### Pin Function Table

| Name                     | Function           |
|--------------------------|--------------------|
| $\overline{\text{CS}}$   | Chip Select Input  |
| SO                       | Serial Data Output |
| Vss                      | Ground             |
| SI                       | Serial Data Input  |
| SCK                      | Serial Clock Input |
| $\overline{\text{HOLD}}$ | Hold Input         |
| Vcc                      | Supply Voltage     |

### Description:

The Microchip Technology Inc. 23X256 are 256 Kbit Serial SRAM devices. The memory is accessed via a simple Serial Peripheral Interface (SPI) compatible serial bus. The bus signals required are a clock input (SCK) plus separate data in (SI) and data out (SO) lines. Access to the device is controlled through a Chip Select ( $\overline{\text{CS}}$ ) input.

Communication to the device can be paused via the hold pin ( $\overline{\text{HOLD}}$ ). While the device is paused, transitions on its inputs will be ignored, with the exception of Chip Select, allowing the host to service higher priority interrupts.

The 23X256 is available in standard packages including 8-lead PDIP and SOIC, and advanced packaging including 8-lead TSSOP.

### Package Types (not to scale)

# 23A256/23K256

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings (†)

|   |                                |
|---|--------------------------------|
| V <sub>CC</sub> .....                               | 4.5V                           |
| All inputs and outputs w.r.t. V <sub>SS</sub> ..... | -0.3V to V <sub>CC</sub> +0.3V |
| Storage temperature .....                           | -65°C to 150°C                 |
| Ambient temperature under bias .....                | -40°C to 125°C                 |
| ESD protection on all pins .....                    | 2kV                            |

† NOTICE: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for an extended period of time may affect device reliability.

**TABLE 1-1: DC CHARACTERISTICS**

| DC CHARACTERISTICS |                      |   | Industrial (I): TA = -40°C to +85°C<br>Automotive (E): TA = -40°C to +125°C |                    |   |                |   |

## 2.0 FUNCTIONAL DESCRIPTION

### 2.1 Principles of Operation

The 23X256 is a 32,768-byte Serial SRAM designed to interface directly with the Serial Peripheral Interface (SPI) port of many of today's popular microcontroller families, including Microchip's PIC® microcontrollers. It may also interface with microcontrollers that do not have a built-in SPI port by using discrete I/O lines programmed properly in firmware to match the SPI protocol.

The 23X256 contains an 8-bit instruction register. The device is accessed via the SI pin, with data being clocked in on the rising edge of SCK. The  $\overline{\text{CS}}$  pin must be low and the HOLD pin must be high for the entire operation.

Table 2-1 contains a list of the possible instruction bytes and format for device operation. All instructions, addresses and data are transferred MSB first, LSB last.

Data (SI) is sampled on the first rising edge of SCK after  $\overline{\text{CS}}$  goes low. If the clock line is shared with other peripheral devices on the SPI bus, the user can assert the HOLD input and place the 23X256 in 'HOLD' mode. After releasing the HOLD pin, operation will resume from the point when the HOLD was asserted.

### 2.2 Modes of Operation

The 23A256/23K256 has three modes of operation that are selected by setting bits 7 and 6 in the STATUS register. The modes of operation are Byte, Page and Burst.

**Byte Operation** – is selected when bits 7 and 6 in the STATUS register are set to 00. In this mode, the read/write operations are limited to only one byte. The Command followed by the 16-bit address is clocked into the device and the data to/from the device is transferred on the next 8 clocks (Figure 2-1, Figure 2-2).

**Page Operation** – is selected when bits 7 and 6 in the STATUS register are set to 10. The 23A256/23K256 has 1024 pages of 32 Bytes. In this mode, the read and write operations are limited to within the addressed page (the address is automatically incremented internally). If the data being read or written reaches the page boundary, then the internal address counter will increment to the start of the page (Figure 2-3, Figure 2-4).

**Sequential Operation** – is selected when bits 7 and 6 in the STATUS register are set to 01. Sequential operation allows the entire array to be written to and read from. The internal address counter is automatically incremented and page boundaries are ignored. When the internal address counter reaches the end of the array, the address counter will roll over to 0x0000 (Figure 2-5, Figure 2-6).

### 2.3 Read Sequence

The device is selected by pulling  $\overline{\text{CS}}$  low. The 8-bit READ instruction is transmitted to the 23X256 followed by the 16-bit address, with the first MSB of the address being a "don't care" bit. After the correct READ instruction and address are sent, the data stored in the memory at the selected address is shifted out on the SO pin.

If operating in Page mode, after the first byte of data is shifted out, the next memory location on the page can be read out by continuing to provide clock pulses. This allows for 32 consecutive address reads. After the 32nd address read the internal address counter wraps back to the byte 0 address in that page.

If operating in Sequential mode, the data stored in the memory at the next address can be read sequentially by continuing to provide clock pulses. The internal Address Pointer is automatically incremented to the next higher address after each byte of data is shifted out. When the highest address is reached (7FFFh), the address counter rolls over to address 0000h, allowing the read cycle to be continued indefinitely. The read operation is terminated by raising the  $\overline{\text{CS}}$  pin (Figure 2-1).

### 2.4 Write Sequence

Prior to any attempt to write data to the 23X256, the device must be selected by bringing  $\overline{\text{CS}}$  low.

Once the device is selected, the Write command can be started by issuing a WRITE instruction, followed by the 16-bit address, with the first MSB of the address being a "don't care" bit, and then the data to be written. A write is terminated by the  $\overline{\text{CS}}$  being brought high.

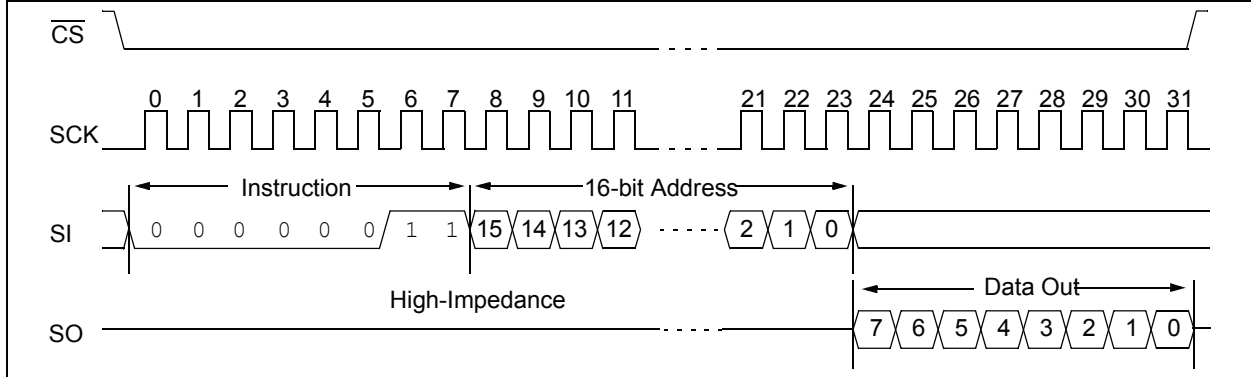

If operating in Page mode, after the initial data byte is shifted in, additional bytes can be shifted into the device. The Address Pointer is automatically incremented. This operation can continue for the entire page (32 Bytes) before data will start to be overwritten.

If operating in Sequential mode, after the initial data byte is shifted in, additional bytes can be clocked into the device. The internal Address Pointer is automatically incremented. When the Address Pointer reaches the highest address (7FFFh), the address counter rolls over to (0000h). This allows the operation to continue indefinitely, however, previous data will be overwritten.

**TABLE 2-1: INSTRUCTION SET**

| Instruction Name | Instruction Format | Description   |
|------------------|--------------------|---|
| READ             | 0000 0011          | Read data from memory array beginning at selected address |
| WRITE            | 0000 0010          | Write data to memory array beginning at selected address  |
| RDSR             | 0000 0101          | Read STATUS register                                      |
| WRSR             | 0000 0001          | Write STATUS register                                     |

FIGURE 2-6: SEQUENTIAL WRITE SEQUENCE

## 2.5 Read Status Register Instruction (RDSR)

The Read Status Register instruction (RDSR) provides access to the STATUS register. The STATUS register may be read at any time. The STATUS register is formatted as follows:

**TABLE 2-2: STATUS REGISTER**

|      |      |   |   |   |   |   |      |
|------|------|---|---|---|---|---|------|
| 7    | 6    | 5 | 4 | 3 | 2 | 1 | 0    |
| W/R  | W/R  | - | - | - | - | - | W/R  |
| MODE | MODE | 0 | 0 | 0 | 0 | 0 | HOLD |

W/R = writable/readable.

The mode bits indicate the operating mode of the SRAM. The possible modes of operation are:

- 0 0 = Byte mode (default operation)
- 1 0 = Page mode
- 0 1 = Sequential mode
- 1 1 = Reserved

Write and read commands are shown in [Figure 2-7](#) and [Figure 2-8](#).

The HOLD bit enables the Hold pin functionality. It must be set to a '0' before HOLD pin is brought low for HOLD function to work properly. Setting HOLD to '1' disables feature.

Bits 1 through 5 are reserved and should always be set to '0'.

See [Figure 2-7](#) for the RDSR timing sequence.

**FIGURE 2-7: READ STATUS REGISTER TIMING SEQUENCE (RDSR)**

# 23A256/23K256

## 2.6 Write Status Register Instruction (WRSR)

The Write Status Register instruction (WRSR) allows the user to write to the bits in the STATUS register as shown in Table 2-2. This allows for setting of the Device operating mode. Several of the bits in the STATUS register must be cleared to '0'. See Figure 2-8 for the WRSR timing sequence.

**FIGURE 2-8: WRITE STATUS REGISTER TIMING SEQUENCE (WRSR)**

## 2.7 Power-On State

The 23X256 powers on in the following state:

- The device is in low-power Standby mode ( $\overline{CS} = 1$ )
- A high-to-low-level transition on  $\overline{CS}$  is required to enter active state

## 3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

**TABLE 3-1: PIN FUNCTION TABLE**

| Name                     | PDIP/SOIC<br>TSSOP | Function           |
|--------------------------|--------------------|--------------------|
| $\overline{\text{CS}}$   | 1                  | Chip Select Input  |
| SO                       | 2                  | Serial Data Output |
| Vss                      | 4                  | Ground             |
| SI                       | 5                  | Serial Data Input  |
| SCK                      | 6                  | Serial Clock Input |
| $\overline{\text{HOLD}}$ | 7                  | Hold Input         |
| Vcc                      | 8                  | Supply Voltage     |

### 3.1 Chip Select ( $\overline{\text{CS}}$ )

A low level on this pin selects the device. A high level deselects the device and forces it into Standby mode. When the device is deselected, SO goes to the high-impedance state, allowing multiple parts to share the same SPI bus. After power-up, a low level on  $\overline{\text{CS}}$  is required, prior to any sequence being initiated.

### 3.2 Serial Output (SO)

The SO pin is used to transfer data out of the 23X256. During a read cycle, data is shifted out on this pin after the falling edge of the serial clock.

### 3.3 Serial Input (SI)

The SI pin is used to transfer data into the device. It receives instructions, addresses and data. Data is latched on the rising edge of the serial clock.

### 3.4 Serial Clock (SCK)

The SCK is used to synchronize the communication between a master and the 23X256. Instructions, addresses or data present on the SI pin are latched on the rising edge of the clock input, while data on the SO pin is updated after the falling edge of the clock input.

### 3.5 Hold ( $\overline{\text{HOLD}}$ )

The  $\overline{\text{HOLD}}$  pin is used to suspend transmission to the 23X256 while in the middle of a serial sequence without having to retransmit the entire sequence again. It must be held high any time this function is not being used. Once the device is selected and a serial sequence is underway, the  $\overline{\text{HOLD}}$  pin may be pulled low to pause further serial communication without resetting the serial sequence. The  $\overline{\text{HOLD}}$  pin must be brought low while SCK is low, otherwise the HOLD function will not be invoked until the next SCK high-to-low transition. The 23X256 must remain selected during this sequence. The SI, SCK and SO pins are in a high-impedance state during the time the device is paused and transitions on these pins will be ignored. To resume serial communication,  $\overline{\text{HOLD}}$  must be brought high while the SCK pin is low, otherwise serial communication will not resume. Lowering the HOLD line at any time will tri-state the SO line.

Hold functionality is disabled by the STATUS register bit.

# 23A256/23K256

## 4.0 PACKAGING INFORMATION

### 4.1 Package Marking Information

8-Lead PDIP

Example:

8-Lead SOIC (3.90 mm)

Example:

8-Lead TSSOP

Example:

|                |   |  |
|----------------|---|--|
| <b>Legend:</b> | XX...X  | Part number or part number code                                  |
|                | T   | Temperature (I, E)   |
|                | Y   | Year code (last digit of calendar year)                          |
|                | YY  | Year code (last 2 digits of calendar year)                       |
|                | WW  | Week code (week of January 1 is week '01')                       |
|                | NNN   | Alphanumeric traceability code (2 characters for small packages) |
|                |  | Pb-free JEDEC designator for Matte Tin (Sn)                      |

**Note:** For very small packages with no room for the Pb-free JEDEC designator  , the marking will only appear on the outer carton or reel label.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

## 8-Lead Plastic Dual In-Line (P) – 300 mil Body [PDIP]

## THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com). Under "Support", click on "Customer Change Notification" and follow the registration instructions.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

**Technical support is available through the web site at: <http://microchip.com/support>**

## READER RESPONSE

It is our intention to provide you with the best documentation possible to ensure successful use of your Microchip product. If you wish to provide your comments on organization, clarity, subject matter, and ways in which our documentation can better serve you, please FAX your comments to the Technical Publications Manager at (480) 792-4150.

Please list the following information, and use this outline to provide us with your comments about this document.

TO: Technical Publications Manager Total Pages Sent \_\_\_\_\_

RE: Reader Response

From: Name \_\_\_\_\_

Company \_\_\_\_\_

Address \_\_\_\_\_

City / State / ZIP / Country \_\_\_\_\_

Telephone: (\_\_\_\_\_) \_\_\_\_\_ - \_\_\_\_\_ FAX: (\_\_\_\_\_) \_\_\_\_\_ - \_\_\_\_\_

Application (optional):

Would you like a reply?  Y  N

Device: 23X256

Literature Number: DS22100F

Questions:

1. What are the best features of this document?

\_\_\_\_\_  
\_\_\_\_\_

2. How does this document meet your hardware and software development needs?

\_\_\_\_\_  
\_\_\_\_\_

3. Do you find the organization of this document easy to follow? If not, why?

\_\_\_\_\_  
\_\_\_\_\_

4. What additions to the document do you think would enhance the structure and subject?

\_\_\_\_\_  
\_\_\_\_\_

5. What deletions from the document could be made without affecting the overall usefulness?

\_\_\_\_\_  
\_\_\_\_\_

6. Is there any incorrect or misleading information (what and where)?

\_\_\_\_\_  
\_\_\_\_\_

7. How would you improve this document?

\_\_\_\_\_  
\_\_\_\_\_

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

| <u>PART NO.</u>           | <u>X</u>    | - | <u>X</u>                             | <u>/XX</u> |
|---------------------------|-------------|---|--------------------------------------|------------|
| Device                    | Tape & Reel |   | Temp Range                           | Package    |
| <b>Device:</b>            | 23A256 =    |   | 256 Kbit, 1.8V, SPI Serial SRAM      |            |
|                           | 23K256 =    |   | 256 Kbit, 3.6V, SPI Serial SRAM      |            |
| <b>Tape &amp; Reel:</b>   | Blank =     |   | Standard packaging (tube)            |            |
|                           | T =         |   | Tape & Reel                          |            |
| <b>Temperature Range:</b> | I =         |   | -40°C to+85°C                        |            |
|                           | E =         |   | -40°C to+125°C                       |            |
| <b>Package:</b>           | P =         |   | Plastic PDIP (300 mil body), 8-lead  |            |
|                           | SN =        |   | Plastic SOIC (3.90 mml body), 8-lead |            |
|                           | ST =        |   | TSSOP, 8-lead                        |            |

**Examples:**

- a) 23K256-I/ST = 256 Kbit, 3.6V Serial SRAM, Industrial temp., TSSOP package
- b) 23A256T-I/SN = 256 Kbit, 1.8V Serial SRAM, Industrial temp., Tape & Reel, SOIC package
- c) 23K256-E/ST = 256 Kbit, 3.6V Serial SRAM, Automotive temp., TSSOP package

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949:2009 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC<sup>®</sup> MCUs and dsPIC<sup>®</sup> DSCs, KEELOQ<sup>®</sup> code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
