

8-Channel 16-Bit/12-Bit $\pm 10V$ V_{OUT} SoftSpan DACs with 10ppm/ $^{\circ}C$ Max Reference

DESCRIPTION

Demonstration circuit 2196A features the **LTC[®]2666**, 8-channel 16-Bit/12-Bit $\pm 10V$ V_{OUT} SoftSpan[™] DACs with 10ppm/ $^{\circ}C$ max reference in a 5mm \times 5mm QFN package. This device features per-channel SoftSpan configuration with five output ranges: 0V to 5V, 0V to 10V, $\pm 2.5V$, $\pm 5V$, and $\pm 10V$. A toggle feature allows any or all DACs to switch between two programmed codes via a single SPI command or by the TGP input pin. The versatile SPI interface can operate on any logic level between 1.71V and 5.5V, for easy interface to lower voltage microcontrollers or FPGAs.

DC2196A-A is populated with the 16-bit version of the LTC2666. DC2196A-B is populated with the 12-bit version for lower resolution applications.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2196A>

Figure 1. Connection Diagram

QUICK START PROCEDURE

Download and install QuikEval™ from:

<http://www.linear.com/designtools/software/#Data>

Connect a DC590 controller or DC2026 Linduino with DC590 emulator firmware to the DC2196A with the supplied ribbon cable. Connect low-noise analog power supplies as shown in Figure 1. A ±15V supply will allow all of the SoftSpan ranges to be used, refer to the LTC2666 data sheet for other supply options if not all SoftSpan ranges are used.

Connect the controller to the host PC's USB port and run QuikEval. The DC2196A software will be downloaded and installed, after which a jumper setting window will appear as shown in Figure 2. The default settings are internal reference, SoftSpan operation with 0V to 5V range, 0V output on power-up. If the jumpers on the board have been changed to a different configuration, select the appropriate options in the pull-down menus to match the board.

Click OK and the main dialog will appear. The control panel gives access to all of the LTC2666's functionality including per-channel SoftSpan ranges, toggling, Power-Down, etc. Detailed instructions are provided in the Help menu.

QUICK START PROCEDURE

Figure 3. Main Control Panel

QUICK START PROCEDURE

External Connections

J1: Interface connector to DC590 controller or Linduino. Provides OVP power, SPI interface, and board identification.

V⁻, GND, V⁺: Analog supplies, connected to the LTC2666 V⁺ and V⁻ pins. Nominally $\pm 15\text{V}$ for operation in all Soft-Span ranges. Refer to the data sheet for other supply configurations.

GND: Four additional ground posts and exposed ground plane around board edge allow solid connection to prototype circuitry and measurement equipment.

VCC: Analog supply voltage. Normally supplied by an onboard LT1761-5 fixed 5V regulator that is powered from the V⁺ supply. For single 5V supply applications, VCC may be tied directly to V⁺ and supplied with 4.5V to 5.5V.

IOVCC: Digital interface power. No connection to this pin is required when used with a DC590 or Linduino controller. If another controller is used, connect to digital supply that powers the SPI bus controller (1.71 to 5.5V).

REF: Connection to the REF pin. In internal reference mode, the reference voltage may be monitored at this point. Placing REF_SEL jumper in the EXT position allows an external reference to be connected to this point.

MUX: Monitor Mux output. Allows surveying the DAC outputs under software control. Must be measured with a high impedance meter (output impedance is nominally $2.1\text{k}\Omega$).

VOUT0 to VOUT7: DAC outputs.

CLR: Asynchronous clear input (pulled high to OVP with a 4.99k resistor). Pull to ground to reset the DAC to the power-on reset value (determined by MSPx pins.)

TGP: Toggle input (pulled high to OVP with a 4.99k resistor). A high level on this pin enables software toggling. See data sheet for a complete description of toggle operation.

LDAC: Asynchronous DAC update. If $\overline{\text{CS}}/\text{LD}$ is high at the falling edge of $\overline{\text{LDAC}}$, DAC outputs will be updated with the contents of the input registers. If $\overline{\text{CS}}/\text{LD}$ is low when $\overline{\text{LDAC}}$ goes low, the DAC registers are updated after $\overline{\text{CS}}/\text{LD}$ returns high.

OVRTMP: Overtemperature pin (pulled high to IOVCC with a 4.99k resistor). The LTC2666 pulls this pin low if the die temperature exceeds approximately 160°C . It is released on the next rising edge of $\overline{\text{CS}}/\text{LD}$.

QUICK START PROCEDURE

Jumpers

REF_SEL (JP1): Selects internal or external reference mode. (See data sheet description of REFCOMP pin.)

MSP0, MSP1, MSP2 (JP2, JP3, JP4): Manual Span control. Setting all jumpers to the 1 position (Default) selects SoftSpan operation, with a power-up default span of 0V to 5V, and reset to Zero-Scale. Other options are listed in Table 1.

LEDs

OVRTMP: Lights when $\overline{\text{OVRTMP}}$ pin asserts, indicating an overtemperature state. (Note that LED will light if positive analog supply is present and OVP is not. OVP is normally supplied by the controller.)

Test Points

The SPI bus is available on a row of through-hole test points next to J1 that may be used to monitor the bus or to drive the bus with an external controller.

EEGND, WP: For factory use only.

Table 1

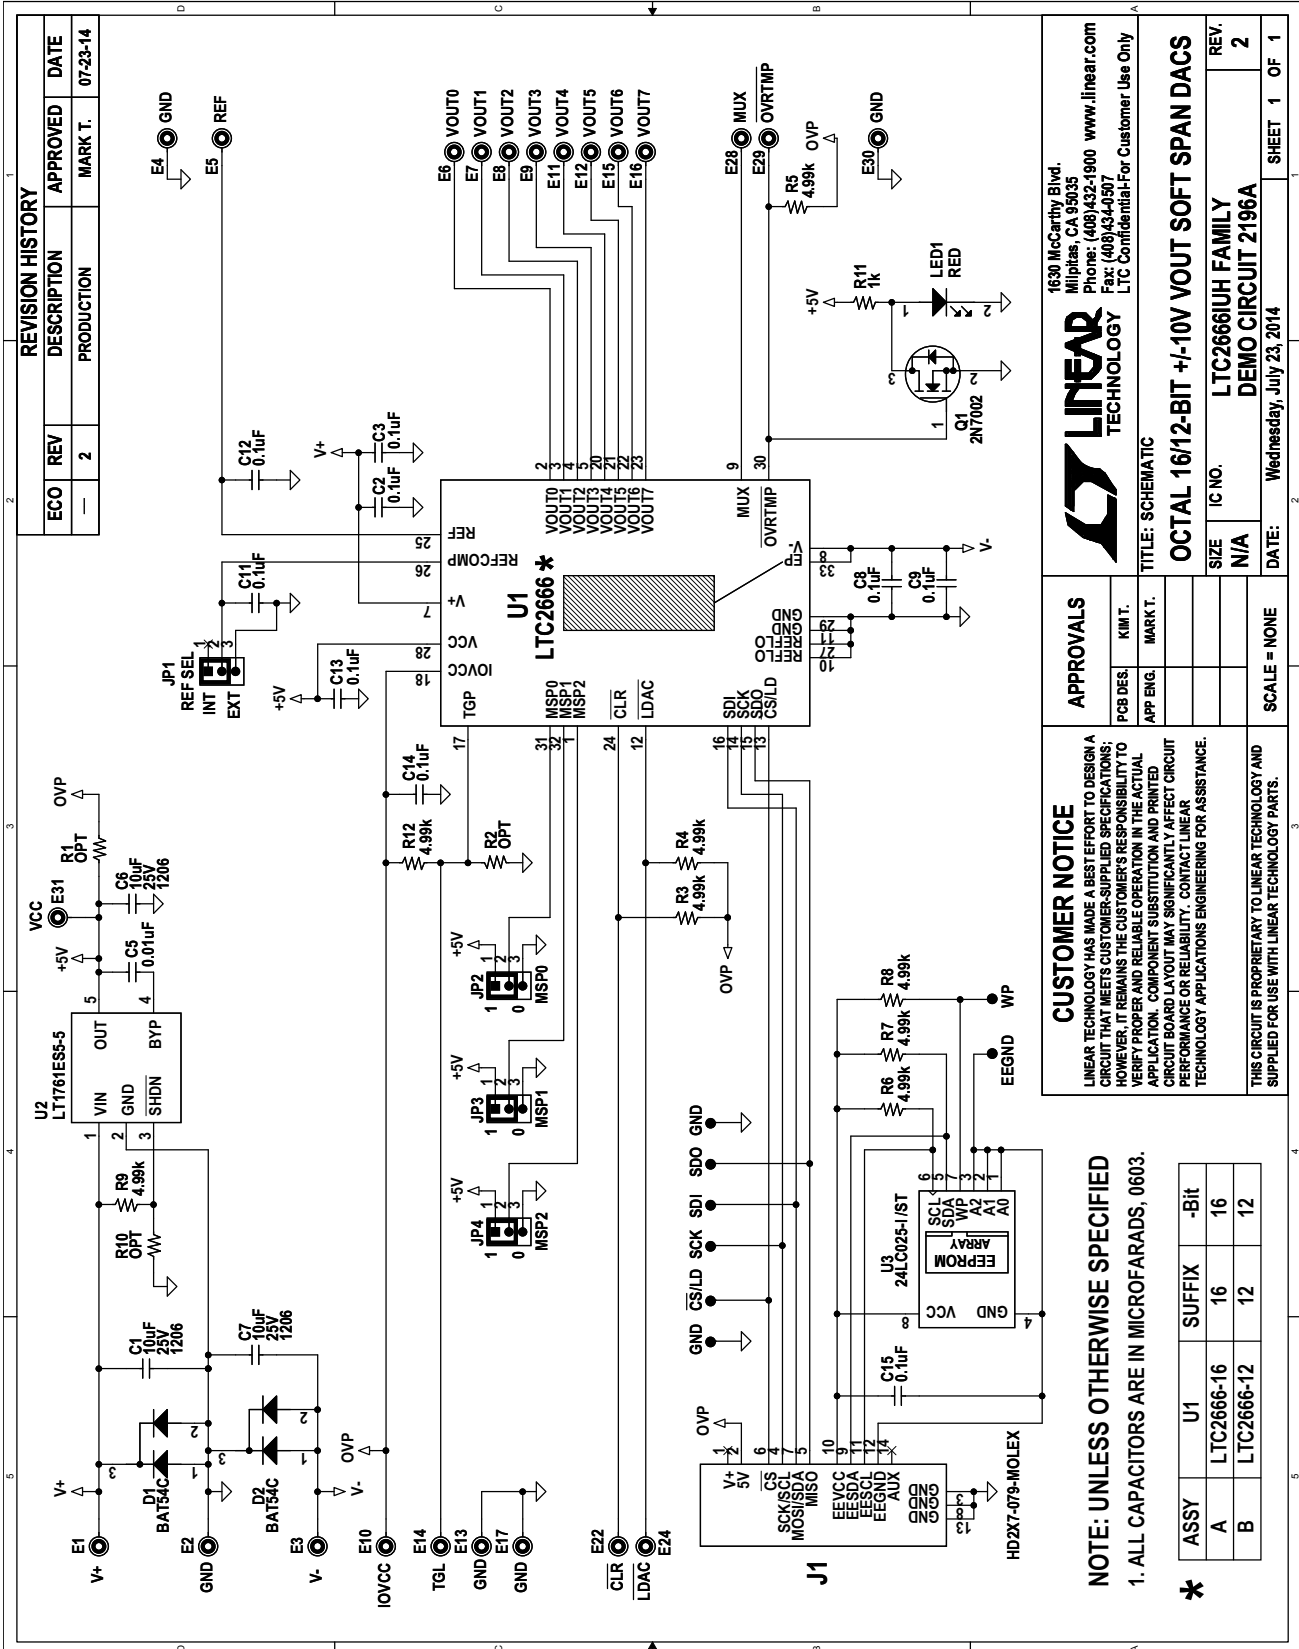

MSP2	MSP1	MSP0	OUTPUT RANGE	RESET CODE	MANUAL SPAN	SoftSpan
0	0	0	±10V	Mid-Scale	X	
0	0	1	±5V	Mid-Scale	X	
0	1	0	±2.5V	Mid-Scale	X	
0	1	1	0V to 10V	Zero-Scale	X	
1	0	0	0V to 10V	Mid-Scale	X	
1	0	1	0V to 5V	Zero-Scale	X	
1	1	0	0V to 5V	Mid-Scale	X	
1	1	1	0V to 5V	Zero-Scale		X

DEMO MANUAL DC2196A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
